Comment: (12/30/20, Industry)

Please consider revising the added language for Specification 8-10.2. The added language at the bottom includes a reference to CPAM, which is not a contract document. If CPAM is inserted into the Specifications, it risks becoming part of the contract. Also, perhaps use of the word "may" can be revised to add stronger language that the Engineer has the ability to approve adjustments to the liquidated damages.
