Comments: (Internal, 11/19/2020)

1. 120-4.2 Construction over Existing Old Road: Where a new roadway is to be constructed over an old one, completely remove existing pavement and base in accordance with Section 110. Place embankment in accordance with this Section.

Response: 120-4.2 has been revised to allow for existing base to remain in place unless otherwise required in the Plans. 110 has been revised to eliminate the potential conflict with 120-4.2.

2. I saw that also. We have been pulverizing (even old sand asphalt base) and leaving in place where fill is going on top.

Response: See response above.

3. The existing base is better off staying in place almost always. I think we strike that portion of the spec.

Response: See response above.
