See the comment below. Let’s discuss.

The Industry has a concern regarding the 5yr paint warranty final acceptance by the department.

Some of these jobs where the department utilizes the Painted Mast Arm Assemblies and has the contractor installing them and In full operation. Then for example, the road project completes years later and then that is when the 5yr paint warranty kicks in. We don’t feel it’s right that this is how the department has this currently in the specifications. See attachment where I highlighted in green. WE would like to see this change where the department would take acceptance when the poles are delivered and that is when the 5yr paint warranty starts.

I suggest that the language be changed to a period of 5 years after final inspection in accordance with 5-10 or after final acceptance in accordance with 5-11 whichever is earlier.

Additional comments/concerns:

In review of the proposed Specification Change for 6490403, we have the following questions / concerns:

649-4.3, now requires “Aluminum Products” to be included on the Department’s Prequalified Paint Poles / Products Fabricators List. The Bases of Estimates 649 pay item series is specific to steel poles however aluminum poles would be covered under pay items series 646 and 715.

Question #1; How does the Department intend to cover 646 and 715 pay items in the 649-4.3 specification change?

Currently the Department’s Prequalified Paint Poles / Products Fabricators List consists of four fabricators. The list represents fabricators that supply painted steel poles (649) and aluminum light poles (715) in the normal course of doing business. However, none of these listed fabricators currently supply aluminum signal poles (646). Upon implementation of the specification change coming into effect, it is possible there would not be an available source for painted aluminum signal poles (646). It is our experience that painted aluminum signal poles are powder coated by smaller local companies that would not likely be listed on the Prequalified
Painted Fabricator List or be able to meet the responsible party paint warranty bond requirements.

**Question #2:** Is it the Department’s intent that painted aluminum signal poles for pay item series (646) must be provided from a fabricator on the Prequalified list?

**Question #3:** Can the Department clarify what aluminum products are covered by the 649-4.3 specification change?
