We have that option to choose different flash patterns for push 2 cross for many reasons. If the customer wanted to put a Beacon on a push-2-cross system or to do a flashing ring instead of an RRFB. We would have to dumb down our system to meet this request and create a bunch of new Skews for FDOT. We do however state in the programming of flash patterns we have a note that States to Select 120 FPM, RRFB Flash and Alternating output for 2018 MUTCD Compliance when using an RRFB Flasher (if you select RRFB with our system the rest of the settings are automatically changed and are unchangeable).
