Section 475-8 Traffic Control. The spec currently reads “ For non-emergency remedial work, the Engineer must approve all lane closures and traffic control plans in advance and notification of lane closures shall be made to the Engineer 48 hours in advance” Comment: We would want more than 48 hours of notice for the MOT since we need to give our community outreach Specialist (COS) the info the Wednesday before work. Therefore the section may be revised accordingly. (comment from Don Larson and confirmed with Kathleen) 475-9 Basis of Payment. All costs associated with remediation of VABC including, but limited to, labor, equipment and materials required for satisfactorily completion of the remediation work; traffic control through the work zone; and access to the remediation site shall be paid for solely by the Responsible Party unless the Statewide Disputes Review Board determines otherwise. Comment: Please verify if the semi colons needs to be replaced by a coma.

Response: Agree. 48 hours will be changed to 5 days. Semi colons do not need to be replaced.
