Specification 711 updates removing "roundabout informational markings" from the list of markings that require preformed thermoplastic. o Consider a further review of Specification 711-4.2.3 in relation to the requirements shown in FDM 230, Table 230.3.1, and update the Specification 711-4.2.3 language to incorporate criteria from the FDM. For example, Stop and Yield lines on concrete and bridge surfaces must be preformed thermoplastic material. o Consider updating Specification 711 to utilize preformed thermoplastic wrong-way arrows when used on arterials for Wrong Way Driving treatments to reduce noise and increase durability.

Response: Thank you for the comment. This is outside the scope of the revision, but we will take this information into consideration for future edits.

Action: No action required.
