COMMENTARY

1. Update all concrete sections for new Single-Slope Traffic Railing.
2. For the through bolt option on Sheet 2, add nut countersink requirement in details and notes.

COMMENTS AND RESPONSES

COMMENT:

Sheet 2 of 3 (Through Bolting): In Note C, it indicates that the countersink depth and diameter is not to exceed 2-1/2". Please verify and consider specifying the MINIMUM diameter that can be provided to allow for installation/removal of the hex nuts.

RESPONSE:

Date: 10/13/2017

This is for the contractor and Engineer's judgement to use a diameter that is practical for their hex nut installation. This will provide space for removal. Okay as-is.
