GENERAL NOTES:

- 1. Cabinet layout is for pole or base mounted installations.
- 2. All dimensions and scale are approximate.
- 3. The minimum CCTV cabinet dimensions shall be 36"H X 24"W X 22"D.
- 4. Conduit entrances are in bottom of cabinet.
- 5. There shall be front and rear doors. Both doors shall have the hinged side next to the pole when pole mounted.
- 6. Cabinet layout represents preferred placement of typical devices. Project-specific designs may not include all components illustrated here.

GENERAL NOTES:

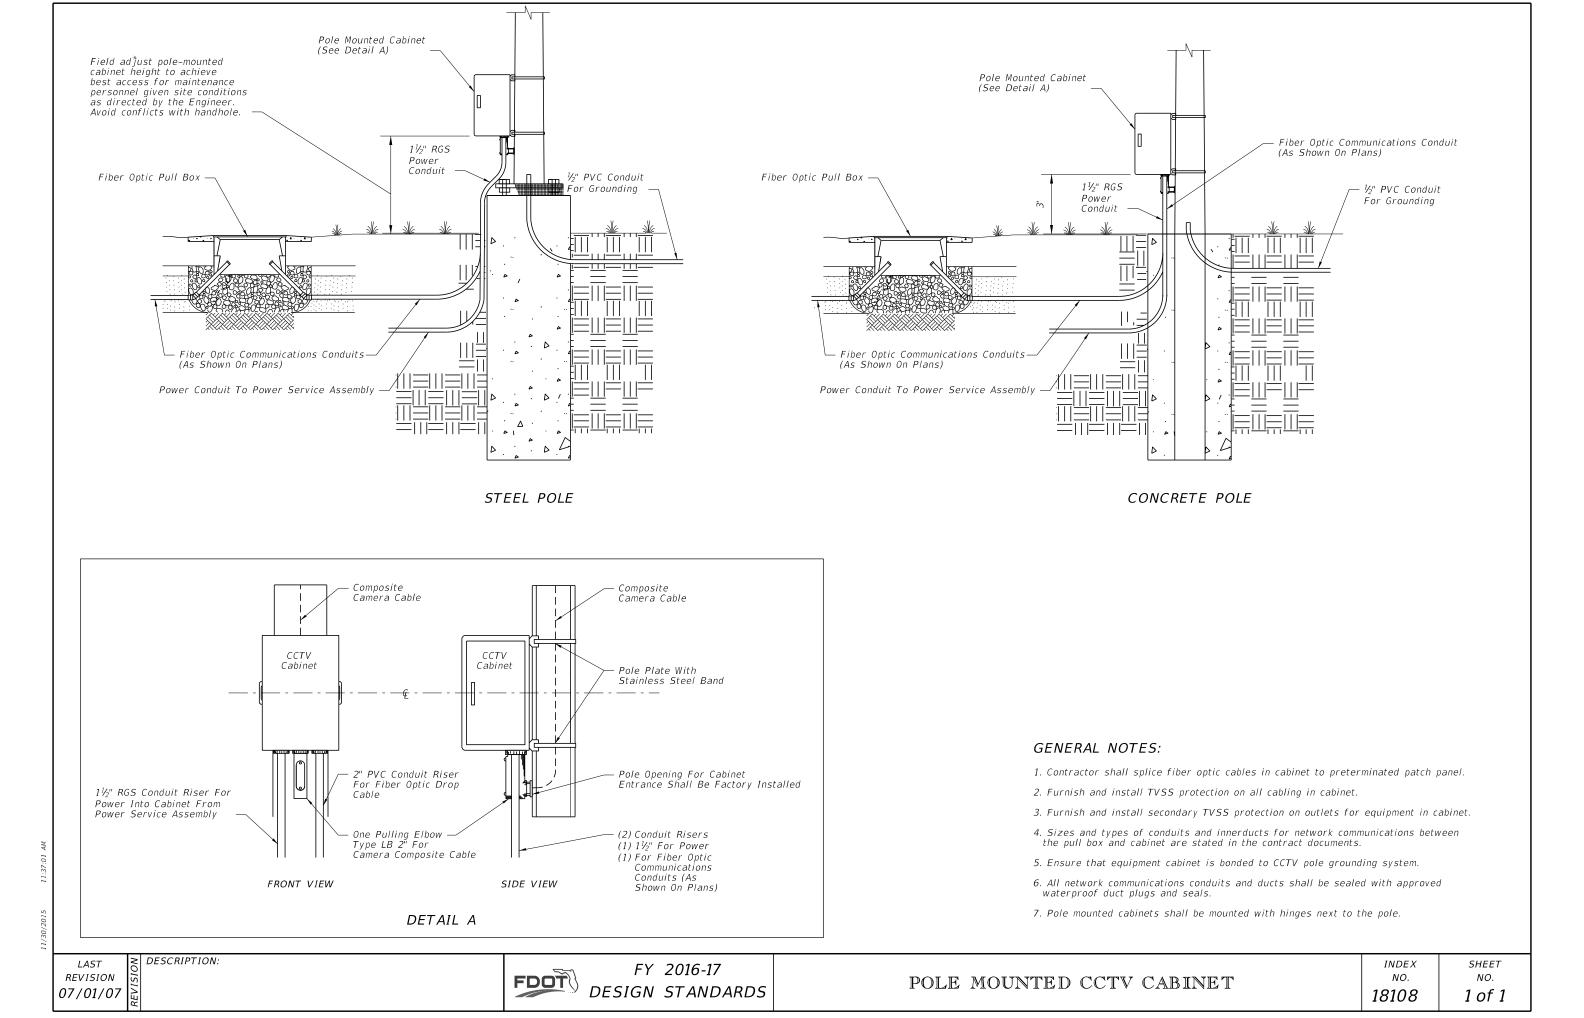

- 1. Contractor shall splice fiber optic cables in cabinet to preterminater patch panel.
- 2. Furnish and install TVSS protection on all video, data, and power cabling in cabinet.
- 3. Ensure that all electronic equipment power is protected and conditioned with TVSS devices.
- 4. Sizes and types of conduits and innerducts for network communications between the pullbox and cabinet are stated in the contract documents.
- 5. See Index 18102 for grounding requirements.
- 6. All network communications conduits and ducts shall be sealed with approved waterproof duct plugs and seals.

INET	index no. 18107	sheet NO. 1 of 1

GENERAL NOTES:

- 1. Lowering device to be shipped ready for pole attachment to include 100 ft. of composite power and signal cable prewired to lowering device at the factory.
- 2. The lowering device manufacturer shall supply both a portable lowering tool with a manual hand crank and a half-inch chuck variable-speed reversible industrial-duty electric drill that matches the winch's manufacturer-recommended revolutions per minute. One lowering tool per every 10 lowering devices is required.
- The lowering device manufacturer shall provide an on-site installation inspection and operator instruction and З. certification. This ensures the product is assembled correctly and that all necessary persons are trained in the proper, safe operation of the system. Before erecting the first pole the contractor must contact the lowering device supplier and schedule a manufacturer's representative to be on-site.
- 4. Design camera mounting arm and connection to tenon according to FDOT Structures Manual (current edition).
- 5. Camera to be mounted to camera junction box and stabilizing weight via $1\frac{1}{2}$ " Standard NPT Pipe Thread.
- 6. Use air terminal extension when the pole top junction box is wider than top of pole.
- 7. The stainless steel device lowering cable shall be installed inside the pole within a 1 ¼" diameter PVC conduit.

FDOT

DESIGN STANDARDS

- 8. All communication and power cables must be neatly bundled and secured.
- 9. Use a Camera Lowering Device listed on the Approved Product List (APL).
- 10. See Index 18113 for concrete pole details and Index 18111 for steel pole details.

FOUNDATION NOTES:

- 1. Concrete: Class IV (Drilled Shaft) with a minimum 4,000 psi compressive strength at 28 days for all environment classifications.
- 2. Reinforcing Steel: ASTM A615 Grade 60.
- 3. Anchor Bolts: ASTM F1554 Grade 55 with ASTM A563 Grade A heavy-hex nuts and plate washers. ASTM F2329 galvanization.
- 4. Install Anchor Bolts in accordance with Section 649-5 of the Specifications.
- 5. Foundation applies to slopes 1:4 or flatter.
- The foundation for the CCTV structure shall be constructed 6. in accordance with Section 455 of the Specifications except that no payment for the foundation shall be made under Section 455.

INSTALLATION NOTES:

- 1. Cable Supports: Electrical Cable Guides and Eyebolts.
 - a. Locate top and bottom cable guides within the pole aligned with each other.
 - b. Position one cable guide 2" below the handhole.
- c. Position other cable guide 1" directly below the top of the tenon
- d. Position Park Stands 2" below the top of the handhole.

2. Lowering Device Installation Notes:

- a. Place the lowering cable that moves within the pole in an interior conduit to prevent it from tangling or interfering with any electrical wire that is in the pole. Ensure that any electrical wire within the pole is routed securely and free from slack.
- b. Mount lowering arm perpendicular to the roadway or as shown in the plans. Position CCTV pole so that the camera can be safely lowered without requiring lane closures.
- c. Coordinate all lowering device hardware requirements (including Tenon, Tenon mounting plates, parking stands, etc.) with lowering device manufacturer

3. Pole Installation Notes:

a. Install pole plumb.

FY 2016-17

DESIGN STANDARDS

FDOT

- b. The pole shall not be erected until the foundation concrete has achieved 70% of the minimum specified 28 day compressive strength
- 4. Refer to Index No. 18108 for conduit and cabinet mounting details.

POLE NOTES:

- inches per foot.
- 3. Use only circumferential welds at base.
- 4. Up to two longitudinal seam welds are permitted.
- tube thickness.
- 7. Identification tag: with stainless steel screws. Locate inside pole and visible from handhole. of steel) and pole base wall thickness.
- not exceed the bolt diameter plus 1/2".
- plans.

10. Pole Material Specifications:

a

с.

h.

- Pole
- h
- Weld Metal: E70XX.
- d. Bolts: ASTM A325, Type 1. Nuts: ASTM A563. Washers: ASTM F-436.
- е.

- q.
 - Galvanization: All other steel: ASTM A123.
- $1\frac{1}{2}$ " in diameter.
- anchor bolt locations.

1. The pole shaft shall be round or 16 sided or more with a constant taper of 0.14

2. Pole shaft may be either One or Two sections (with telescopic field splice).

5. Longitudinal seam welds within 6" of circumferential welds shall be complete penetration welds. Longitudinal seam welds on female section of telescopic field splices shall be complete penetration welds for the splice length plus six inches. All other areas, size the partial penetration welds to at least 60% of the pole

6. Perform all welding in accordance with the American Welding Society Structural Welding Code (Steel) ANSI/AWS D1.1 (current edition). For additional welding requirements see AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals, Section 5.15, Welded Connections.

Furnish each pole with a 2"x4" (max.) aluminum identification tag, secured to pole

Provide Financial Project ID, pole height, manufacturer's name, yield strength (Fy

8. Except for Anchor Bolts, all bolt hole diameters shall be equal to the bolt diameter plus 1/16", prior to galvanizing. Hole diameters for anchor bolts shall

9. This Design Standard is considered fully detailed and no shop drawings are necessary. Submit Shop Drawings for minor modifications not detailed in the

ASTM A1011 Grade 50, 55, 60 or 65 (less than 1/4") or ASTM A572 Grade 50, 60 or 65 (greater than or equal to 1/4") or ASTM A595 Grade A (55 ksi yield) or Grade B (60 ksi yield).

Steel Plates and Pole Cap: ASTM A36 or ASTM A709 Grade 50.

Handhole frame: ASTM A709 Grade 36 or ASTM A36.

Handhole cover: ASTM A1011 Grade 50, 55, 60 or 65.

Stainless steel screws: AISI Type 316.

Nuts, bolts and washers: ASTM F2329.

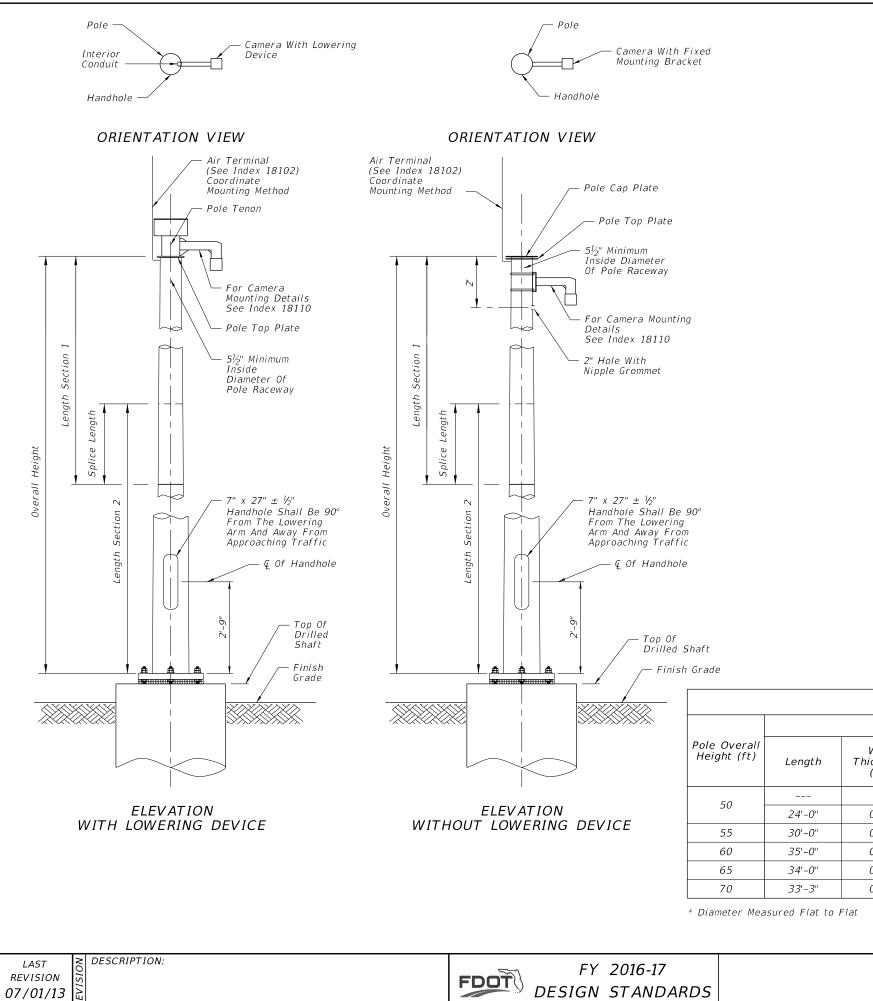

11. Additional wire access holes not shown in this Design Standard shall not exceed

12. Verify CSL access tubes will not interfere with anchor bolt installation before excavating the shaft. When CSL access tube locations conflict with anchor bolt locations, move the CSL access tube location \pm two inches along the inner circumference of the reinforcing cage. Notify the Engineer before excavating the shaft if the CSL access tube locations cannot be moved out of conflict with

LOWERING DEVICE INSTALLATION NOTES:

- Place the lowering cable that moves within the pole in an 1. interior conduit to prevent it from tangling or interfering with any electrical wire that is in the pole. Ensure that any eléctrical wire within the pole is routed securely and free from slack.
- Mount lowering arm perpendicular to the roadway or as shown in the plans. Position CCTV pole so that the camera can be 2. safely lowered without requiring lane closures.
- Coordinate all lowering device hardware requirements 3. (including Tenon, Tenon mounting plates, parking stand, etc.) with lowering device manufacturer.

POLE NOTES:

- 1. Pole Material Specifications:
 - a. Pole: Use Class VI Concrete with 6 ksi minimum strength at transfer.
 - b. Prestressing Strands: ASTM A416 Grade 270 low relaxation.
 - c. Reinforcing Steel: ASTM A615 Grade 60.
 - d. Spiral Reinforcing: ASTM A1064 Cold-Drawn.
 - e. Bolts: ASTM F1554, Grade 55. Nuts: ASTM A563, Grade A Heavy Hex. Washers: ASTM F436.
 - f. Steel plates and Pole Cap: ASTM A36 or ASTM A709 Grade 50.
 - g. Galvanization: Bolts, nuts and washers: ASTM F2329 All other steel: ASTM A123
- The pole shall be round or 12-sided. 2.
- З. Cut the tip end of the prestressed strand first or simultaneously with the butt end.
- 4. For spiral reinforcing, one turn is required for spiral splices and two turns are required at the top and bottom of poles.
- 5. For Reinforcing Steel, lap splice to consist of a 3'-0" lap length at each splice. No more than two opposing rebar to be spliced at the same cross section. Stagger lap splices as needed.

- 6. Section 400
- 7. Provide a 1" minimum cover.
- 8 plated screws.
- 9. Financial Project ID Pole Manufacturer Pole Length
- 10. Install pole plumb.
- detailed in the plans.

HANGER LOCATION DETAIL

(Cantilever Sign Structure Shown, Span Sign Structure Similar)

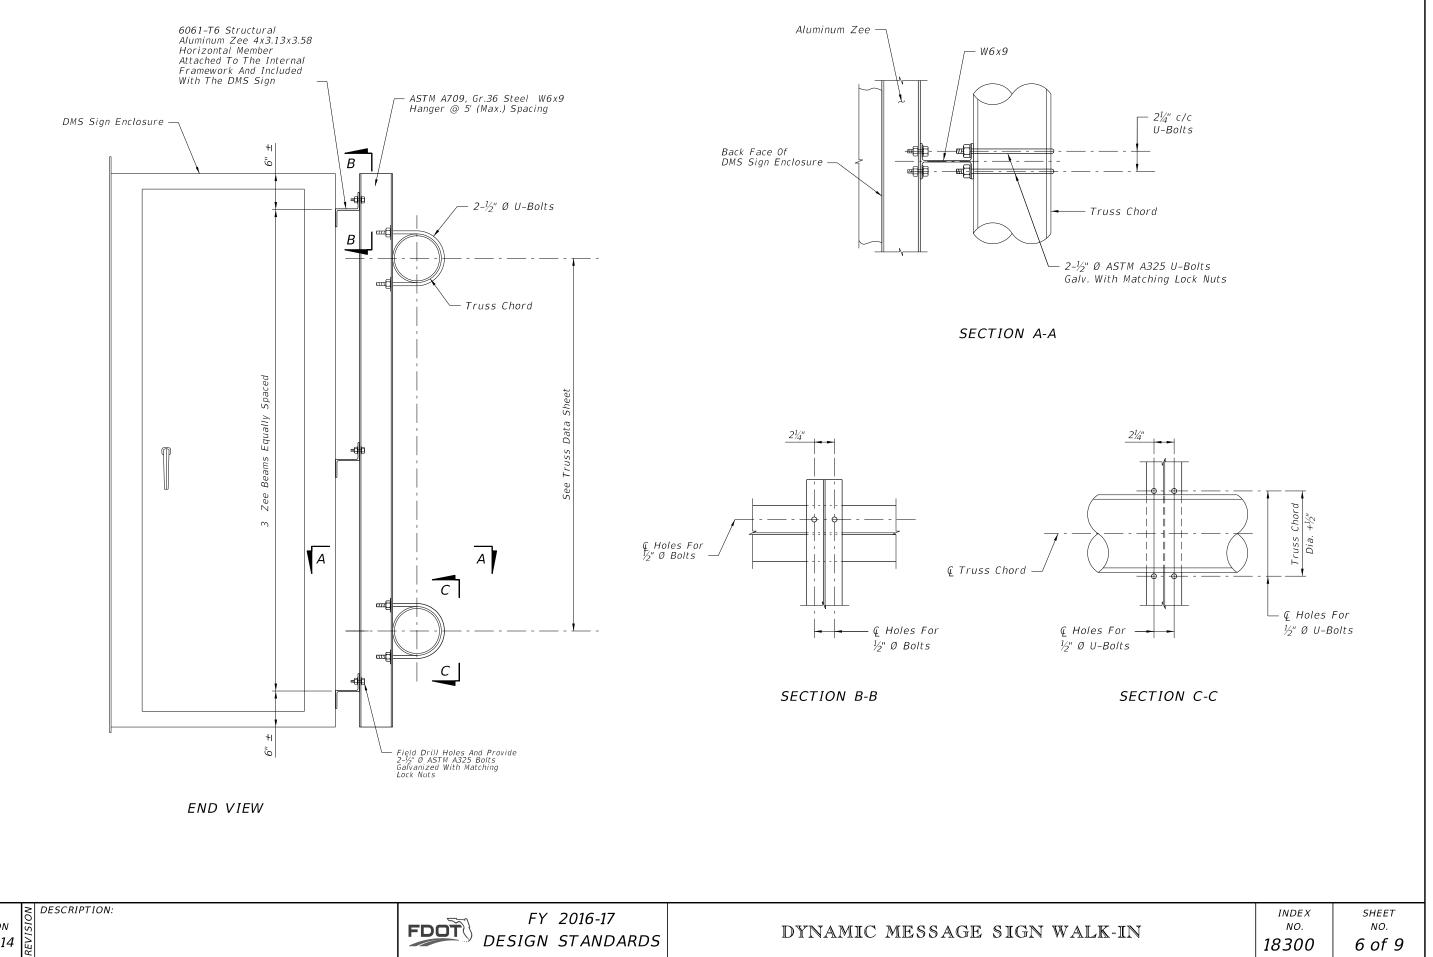

NOTES

- Design Specifications: FD0T Structures Manual (current edition) and AASHT0 Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals.
- 2. DMS and Hanger Design Wind Speed: 150 miles per hour. Maximum DMS weight for design: 4500 lb.
- 3. Shop drawings including the DMS connection are required and fabrication shall not begin until these shop drawings are approved.
- 4. Locate the sign horizontal on the structure as shown in the plans. Vertically center the sign enclosure with the centerline of the truss.
- 5. Before erection, after both the delivery of the DMS and the steel truss, the contractor shall carefully measure the exact locations for field drilling the ½" bolt holes in the vertical hangers and horizontal mounting member attached to the sign enclosure. Field locate holes to allow vertical hanger placement as shown on the plans with no conflicts with gusset or splice plates.
- 6. All steel items shall be galvanized as follows: All nuts, bolts and washersASTM F2329 All other steel itemsASTM A123
- 7. All bolt holes shall be equal to the bolt diameter plus $\frac{1}{16}$ ", prior to galvanizing.
- 8. All bolts shall have single self-locking nuts, or locking nut system, installed in accordance with the manufacturer's recommendations.
- 9. Cost of the installation of the DMS on truss including the vertical hanger, associated members, and hardware shall be incidental to the cost of the sign structure.
- 10. Threaded couplings shall be located on sign side of column above the sign truss.
