

PULL BOX

FIBER OPTIC BOX

Rectangular boxes are depicted. Round fiber optic splice boxes and lids are allowed.

NOTES:

- 1. Boxes shall not be installed in roadways or driveways.
- 2. Boxes shall be on the Approved Product List (APL).
- 3. Boxes shall be installed flush with the finished grade surface.
- 4. Fiber Optic splice boxes shall be provided with cable hanger racks designed to support cables and splice enclosures. Cost of racks to be included in cost of splice box.
- 5. Fiber optic boxes shall contain only Fiber Optic Cable, Conduit, and Locate Wire.
- 6. Conduit center line shall be aligned to top edge of box to facilitate cable pulling.
- 7. All boxes shall have 1'-0" wide (min) concrete apron. Concrete for concrete aprons shall be Class NS with a minimum strength at 28 days of f'c=2.5 Ksi. Aprons shall be sloped away from box. Cost of apron to be included in the cost of each box.
- 8. Prevent the ingress of Water, Dirt, Sand, and other foreign materials into the conduit prior to, during and after construction using a foam-sealing material, rubber plug, or other device designed for this application and approved.

FY 2016-17 DESIGN STANDARDS

INDEX NO. 17700

SHEET NO. 1 of 1

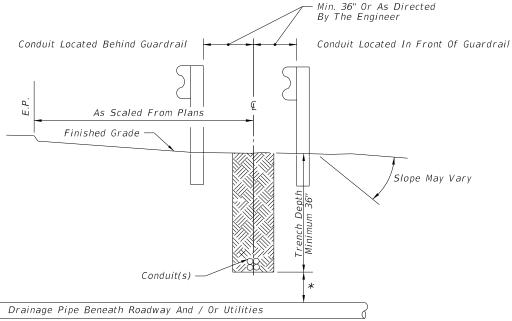

FOR USE IN INSTALLING CONDUIT UNDER EXISTING ASPHALT PAVEMENT NOT ADJACENT TO GUTTER WHEN JACKING OR DIRECT BORING IS NOT FEASIBLE.

FIGURE C

- 1. Rigid conduit must be used when jacking under existing pavement at 36" minimum depth.
- 2. Asphalt to be sawcut at the edges of the trench.
- 3. The removal and replacement of the additional pavement width (6") will not be required when the trench can be constructed without disturbing the asphalt surface on either side.

* Maintain 12" Minimum Vertical Clearance When Crossing Over Pipe And / Or Utilities. If Minimum Vertical Clearance Cannot Be Maintained, Then Conduit Is To Be Routed Under Pipe Maintaining 12" Minimum Vertical Clearance.

FOR USE IN AREAS NOT EXPOSED TO VEHICULAR TRAFFIC

FIGURE A

- 1. Sidewalk patches to match existing joints.
- 2. Entire sidewalk slab must be replaced when specified in the plans.
- Backfill and tamp with material from trench except at driveways. At driveways, backfill a length of trench within the driveway entirely with Flowable Fill.

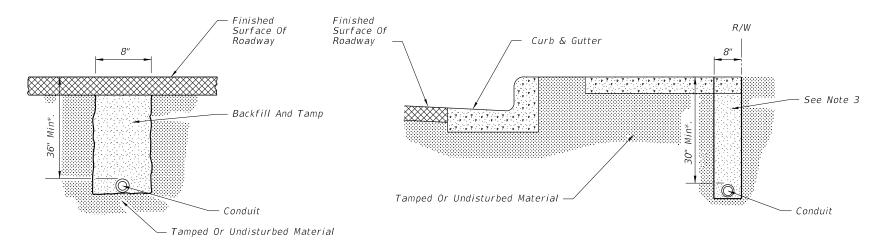

FOR USE IN ASPHALT ROADWAY ADJACENT TO GUTTER WHEN PLACEMENT OUTSIDE OF THE PAVEMENT IS NOT FEASIBLE.

FIGURE B

Note:

- Trench not to be open more than 250' at a time when construction area is subject to vehicular or pedestrian traffic.
- 2. Asphalt to be sawcut to leave neat lines at the pavement cut.
- 3. See note 3 Figure C.

*May be adjusted due to field conditions upon approval of project engineer.

CONDUIT INSTALLATION DETAILS

NOTES:

- 1. Work with Index 17727 for grounding and span wire details. See the Plans for clamp spacing, cable sizes and forces, signals and sign mounting locations and details.

This Index is considered fully detailed, only submit shop drawings for minor modifications not detailed in the Plans.

Split-lock washers and self-locking nuts are not permitted

- A. Strain Pole and Backing Rings:
 - a. Less than ¾₁₆": ASTM A1011 Grade 50, 55, 60 or 65
 - b. Greater than or equal to $\frac{3}{16}$ ": ASTM A572 Grade 50, 55, 60 or 65
- c. ASTM A595 Grade A (55 ksi yield) or Grade B (60 ksi yield)
- B. Steel Plates: ASTM A36
- C. Weld Metal: E70XX
- D. Bolts, Nuts and Washers:
 - a. High Strength Bolts: ASTM A325 Type 1
 - b. Nuts: ASTM A563 Grade DH Heavy-Hex
 - c. Washers: ASTM F436 Type 1, one under turned element
- E. Anchor Bolts, Nuts and Washers.
- a. Anchor Bolts: ASTM F1554 Grade 55
 - b. Nuts: ASTM A563 Grade A Heavy-Hex (5 per anchor bolt) c. Plate Washers: ASTM A36 (2 per bolt)
- F. Handhole Frame: ASTM A709 or ASTM A36, Grade 36
- G. Handhole Cover: ASTM A1011 Grade 50, 55, 60 or 65
- H. Aluminum Pole Caps and Nut Covers: ASTM B26 (319-F)
- I. Stainless Steel Screws: AISI Type 316
- J. Threaded Bars/Studs: ASTM A36 or ASTM A307
- K. Concrete: Class IV (Drilled Shaft) for all environmental classifications.
- L. Reinforcing Steel: Specification Section 415

4. Fabrication:

- A. Pole Taper: Change diameter at a rate of 0.14 inches per foot.
- B. Upright splices are not allowed. Transverse welds are only permitted at the base.
- C. Provide bolt hole diameters as follows:
 - a. Bolts (except Anchor Bolts): Bolt diameter plus 1/16", prior to galvanizing.
 - b. Anchor Bolts: Bolt diameter plus 1/2", maximum.
- D. Locate handhole 180° from 2" wire entrance pipe.
- E. Identification Tag: (Submit details for approval.)
 - a. 2"x 4" (Max.) aluminum identification tag.

 - b. Locate on the inside of the pole and visible from the handhole. c. Secure to pole with $V_8^{\prime\prime}$ diameter stainless steel rivets or screws.
 - d. Include the following information on the ID Tag: 1. Financial Project ID

 - 2. Pole Type
 - 3. Pole height 4. Manufacturers' Name
 - 5. Fy of Steel
 - 6. Base Wall Thickness
- F. Provide a 'J' or 'C' hook at the top of the pole for signal wiring support (See Sheet 3). G. Perform all welding in accordance with Specification Section 460-6.4. H. Hot Dip Galvanize after fabrication.

5. Coatings:

- A. All Nuts, Bolts, Washers and Threaded Bars/Studs: ASTM F2329
- B. All other steel items ASTM A123

6. Construction:

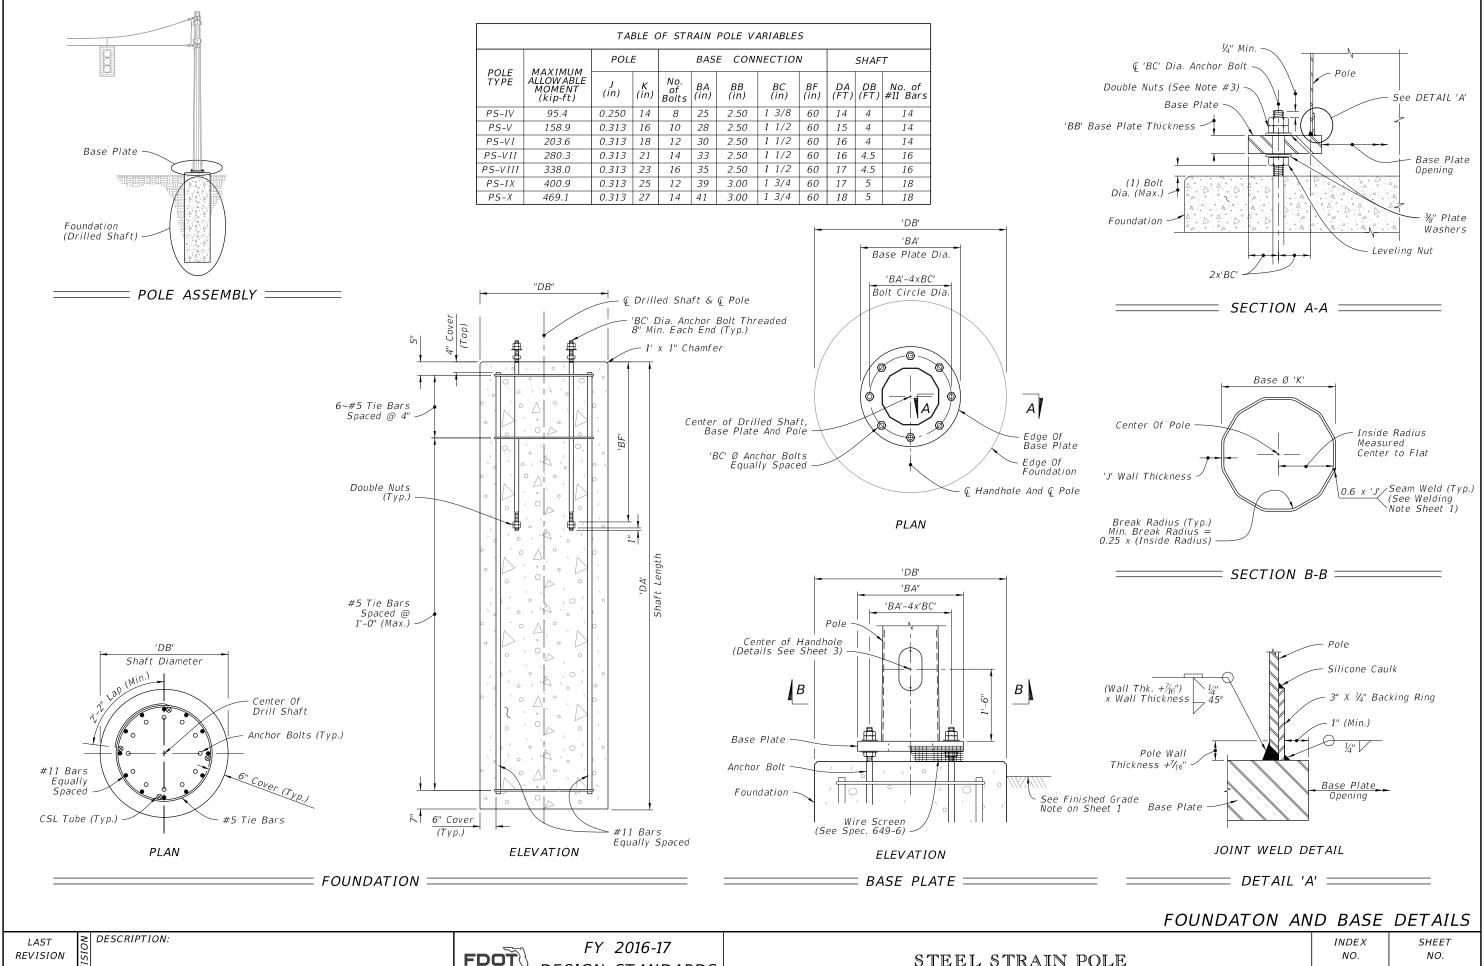

- A. Foundation: Specification Section 455, except that payment is included in the cost of the strain pole.
- B. After installation, place wire screen between top of foundation and bottom of baseplate in accordance with Specification Section 649-6.

NOTES:

- 1. Clamps have been sized for Design Cable Loads shown in the Clamp Thickness Table, and a Maximum Pole Diameter at the Clamp location of 2'-1". Use one clamp per cable.
- 2. Install a properly sized Weather Head, fastened securely to the standard pipe for each pole location. At locations other than the wire entrance, the Weather Head face is to be left closed to outside atmosphere. Wire entrance installed per Index 17727.
- Any combination of Option 'a' or 'b' may be used provided both lifting and wiring is accommodated.

STEEL STRAIN POLE

INDEX NO. 17723

SHEET NO. 3 of 3

GENERAL NOTES:

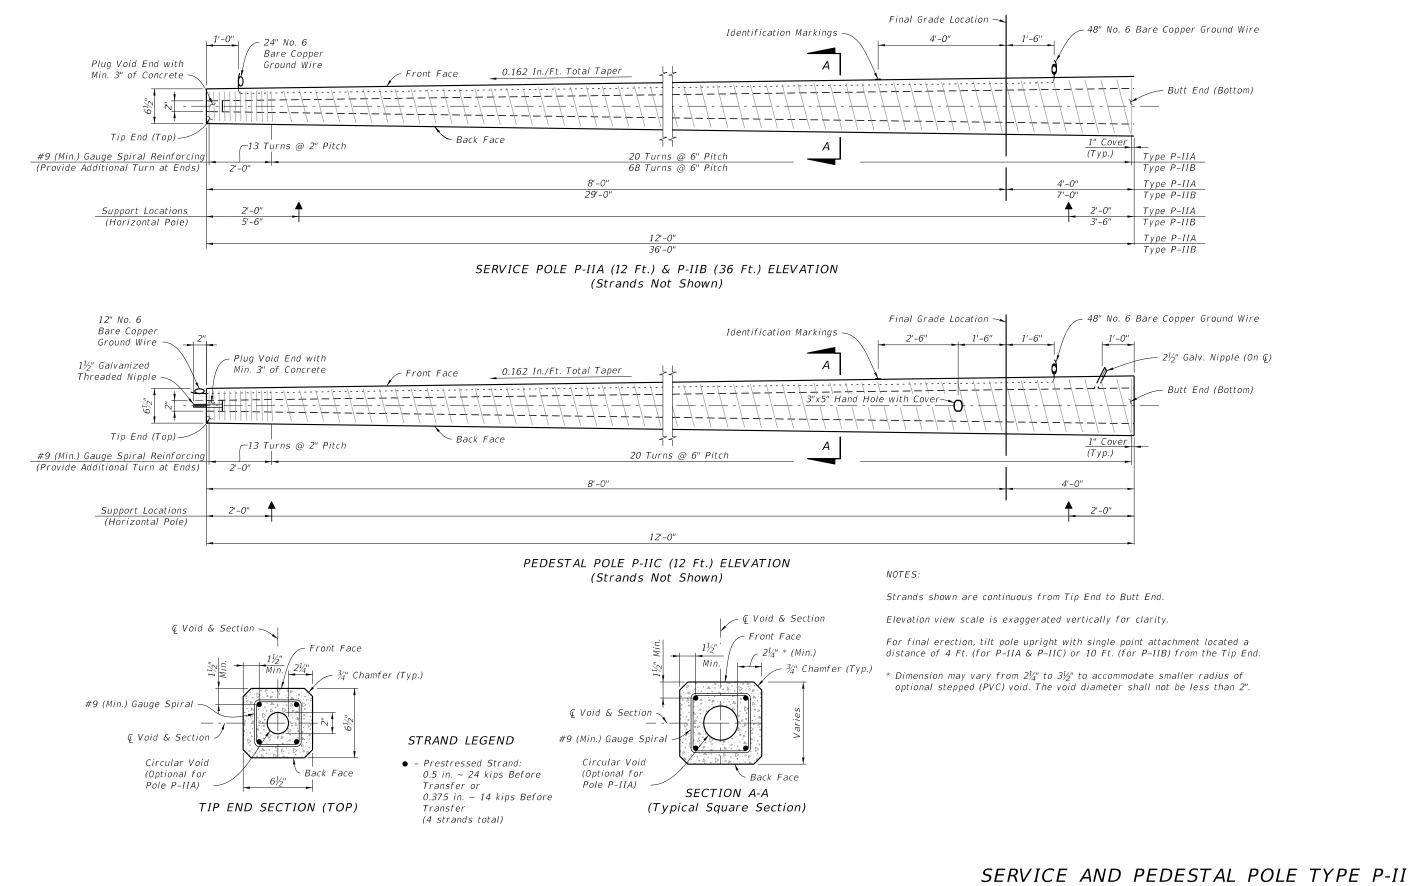

- Work these Index drawings with the Strain Pole Schedule in the Plans. Shop Drawings: This Design Standard is considered fully detailed and no shop drawings are necessary. Submit shop drawings for minor modifications not detailed in the plans.
- Materials:
 - Concrete: Class V Special or Class VI
 Prestress Strands & Spiral Reinforcing: Specification Section 641
 Hand and coupler cover plates: Hand and coupler cover plates: Non-corrosive material
 - Screws: Round headed, chrome plated
- 4. Fabrication:
 - A. Pole Taper for pole width, strands, reinforcing and void: 0.081 in/ft per face. B. Concrete Cover: 1" minimum

 - Spiral Reinforcing: As shown, plus one turn for splices and two turns at both the tip and butt ends of the pole.
 - The design dimensions for Front Face (FF) and Back Face (BF) of the poles may vary transversely from the section shown by $\pm \frac{1}{4}$ " to assist with removal from forms. Balance addition and subtraction of the face widths to maintain section areas shown.
 - Tie ground wires to the interior of reinforcing steel to prevent displacement during concreting operations.
 - Cut the tip end of the prestressed strand first or simultaneously with the butt end
 - Provide cover plates and screws for hand hole and couplers. Attach cover plates to the poles using lead anchors or embedded threaded inserts.
 - Provide Aluminum Identification Tags on the poles with the following information:
 - Financial Project ID.
 - Pole Manufacturer
 - Standard Pole Type Number
 - d. Pole Length (L)
- Support locations are for strand release, storage, lifting and transport. Keep BF oriented downward until final erection.
- Pick-up and support locations shown may vary within a tolerance of ± 3 ".
- 7. Two point attachment: provide an eye bolt hole for the messenger wire. 8. Tether Wire: When required, field-drill the eyebolt hole prior to installation

WIRE WITH CLAMPS

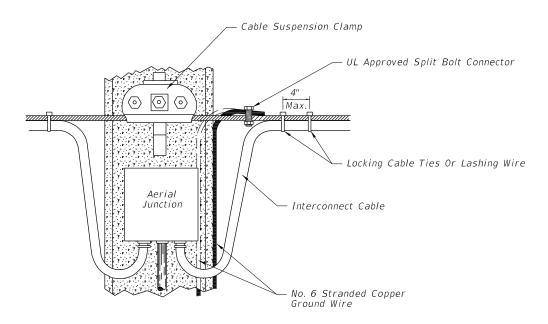

FIGURE C
CABLE DROP DETAIL
AERIAL INTERCONNECT MESSENGER
WIRE WITH CLAMPS

Notes:

- The messenger wire of the interconnect cables shall be grounded to the copper ground wire of the pole or to the external wire extending down the pole.
- When utilizing the external ground wire to the pole, a piece of ½" conduit shall extend up the pole externally to a point 8" above finish grade to protect the ground wire connecting the messenger wire to the ground rod.
- 3. Locking cable ties or lashing wire when used shall be placed no further than 12" apart except at the point of cable drop or terminations where one (1) shall be placed at the point where the cables separate from the messenger wire and another placed 4" (max) from that tie. When using figure "8" interconnect cable only the locking cable ties shall be used.
- 4. If accessible the internal ground wire of the support pole may be used to ground the messenger wire.
- 5. Lashing wire should normally be used for distances of 12' or greater.
- 6. Meet all grounding requirements of Section 620 of the Standard Specifications.

"E" MAST ARMS

REVISION 07/01/14

≥ DESCRIPTION:

FY 2016-17 DESIGN STANDARDS

GENERAL NOTES

- 1. Shop Drawings: This Index is considered fully detailed, only submit shop drawings for minor modifications not detailed in the Plans.
- 2. Prior to Fabrication: Verify the installed foundation elevation will result in the required signal elevation and adjust the Pole height as needed.
- 3. Details for Signal and Sign locations, Signal Head attachment, Sign attachment, Pedestrian Head attachment, and Foundation Conduit are not shown for simplicity.
- 4. Materials:
 - Split-lock washers and self-locking nuts are not permitted
 - A. Poles, Mast Arms and Backing Rings:
 - a. Less than 3/16": ASTM A1011 Grade 50, 55, 60 or 65
 - b. Greater than or equal to $\frac{3}{16}$ ": ASTM A572 Grade 50, 55, 60 or 65
 - c. ASTM A595 Grade A (55 ksi yield) or Grade B (60 ksi yield)
 - B. Steel Plates: ASTM A36
 - C. Weld Metal: E70XX
 - D. Bolts, Nuts and Washers:
 - a. High Strength Bolts: ASTM F3125, Grade A325, Type 1
 - b. Nuts: ASTM A563 DH Heavy-Hex
 - c. Washers: ASTM F436 Type 1, one under turned element
 - E. Anchor Bolts, Nuts and Washers:
 - a. Anchor Bolts: ASTM F1554 Grade 55
 - b. Nuts: ASTM A563 Grade A Heavy-Hex (5 per anchor bolt)
 - c. Plate Washers: ASTM A36 (2 per bolt)
 - F. Threaded Bars/Studs: ASTM A36 or ASTM A307
 - G. Handhole Frame: ASTM A709 or ASTM A36, Grade 36
 - H. Handhole Cover: ASTM A1011 Grade 50, 55, 60 or 65
 - I. Aluminum Pole Caps and Nut Covers: ASTM B26 (319-F)
 - J. Stainless Steel Screws: AISI Type 316
 - K. Concrete: Class IV (Drilled Shaft) for all environmental classifications.
 - L. Reinforcing Steel: Specification Section 415

5. Fabrication:

- A. Pole and Mast Arm Taper: Change diameter at a rate of 0.14 inches per foot.
- B. Upright splices are not allowed. Transverse welds are only permitted at the base.
- C. First and Second arm camber angle = 2°
- D. Provide bolt hole diameters as follows:
 - a. Bolts (except Anchor Bolts): Bolt diameter plus $\frac{1}{16}$ ", prior to galvanizing.
 - b. Anchor Bolts: Bolt diameter plus 1/2" (Max.)
- E. Face handhole perpendicular from arm on single arm poles, perpendicular from first arm of double arm poles facing away from traffic or see special instructions on the Mast Arm Tabulation Sheet.
- F. Seam weld on bottom side of arm. Seam weld under Arm 1 side of pole.
- G. Provide a 'J' or 'C' hook at the top of the pole for signal wiring support (See Sheet 6).
- H. Perform all welding in accordance with Specification Section 460-6.4.
- I. Hot Dip Galvanize after fabrication.

6. Coatings:

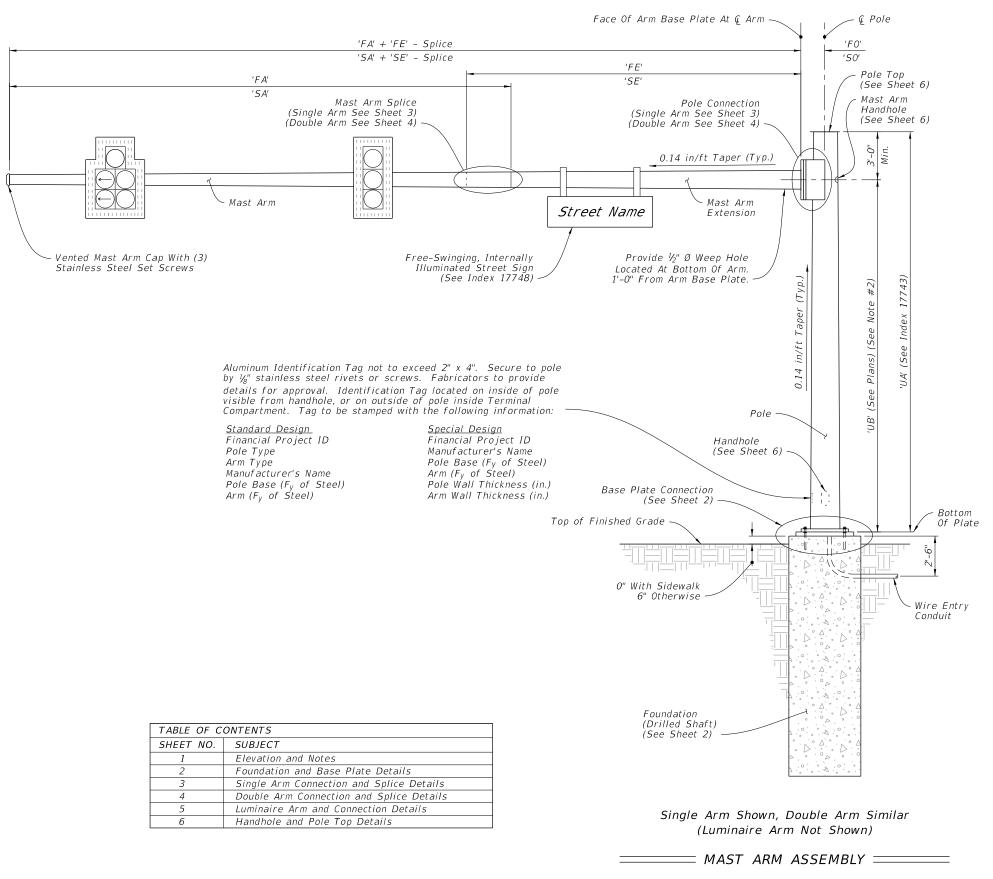

- A. All Nuts, Bolts, Washers and Threaded Bars/Studs: ASTM F2329
- B. All other steel items ASTM A123

7. Construction:

- A. Foundation: Specification Section 455 Drilled Shaft, except that payment is included in the cost of the Mast Arm.
- B. Install Pole vertically.

DESCRIPTION:

- C. Place structural grout pad with drain between top of foundation and bottom of baseplate in accordance with Specification Section 649-7.
- D. Attach Sign Panels and Signals centered on the elevation of the Mast Arm.
- E. Wire Access holes are 11/2" or less in diameter.

MAST ARM ASSEMBLIES

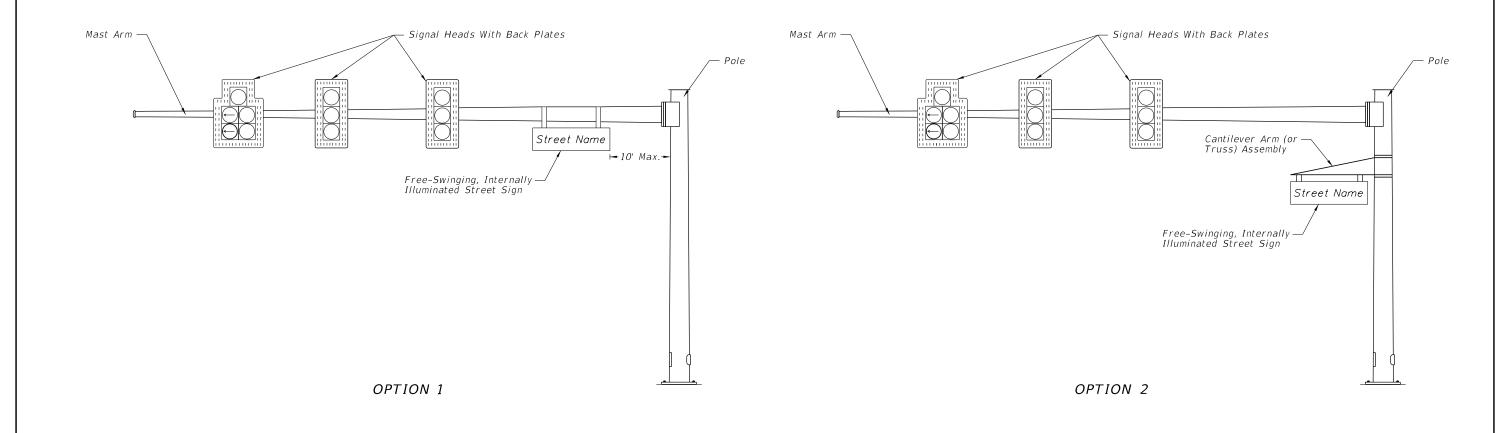

INDEX NO. 17745

SHEET NO. 5 of 6

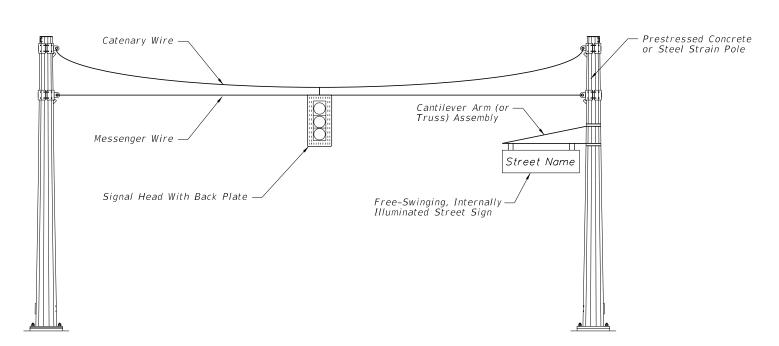

DESCRIPTION:

12/3/2015

MAST ARM ASSEMBLY

SPAN WIRE ASSEMBLY

NOTES:

- 1. Free-swinging, internally-illuminated street signs shall only be installed on the signal pole for span wire assemblies. For mast arm assemblies the street sign may be installed on the
- 2. Free-swinging, internally-illuminated street signs shall meet the requirements of Section 700 of the Standard Specifications for Road and Bridge Construction.
- 3. Pole attachments and cantilever arm (or truss) assemblies may be accepted by Contractor certification provided the signs being supported meet the weight and area limitations included in Section 700 for "Acceptance by Certification".
- 4. Pole attachments and cantilever arm (or truss) assemblies supporting signs not meeting the weight or area limitations included in Section 700 for "Acceptance by Certification" require the submittal of structural calculations and Shop Drawings that have been prepared by and sealed by the Specialty Engineer.

FREE-SWINGING INTERNALLY-ILLUMINATED STREET SIGN ASSEMBLIES

INDEX NO. 17748

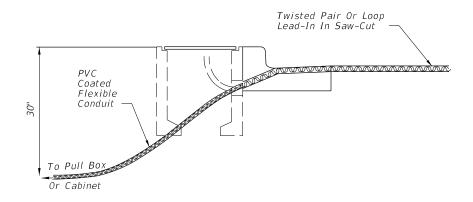

SHEET NO. 1 of 1

TWISTED PAIR AND LOOP LEAD-IN INSTALLATION WITH CURB & GUTTER

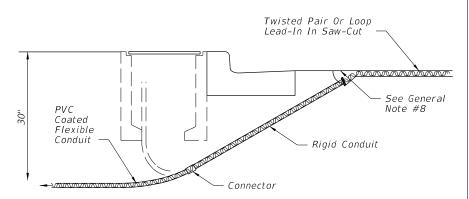

ALTERNATIVE 1

Drill A Hole Through The Curb At The Point Which The Required Saw-Cut Depth Is Obtained Just Prior To Cutting The Top Inside Edge Of The Curb. Slide A Section Of Flexible Conduit At Least 6" Into The Hole From The Back Side Of The Curb But Not Within 2" Of The Top Of The Hole. The Conduit Shall Fit Snug Within The Drilled Hole. Fill The Top Of The Hole With Loop Sealant To The Level Of The Curb Surface. A Nonmetallic Material Should Be Used To Prevent Excessive Loop Sealant From Entering The Flexible Conduit.

ALTERNATIVE 2

Drill A Hole ½" To 1" Larger In Diameter Than The Rigid Conduit To Be Used Through The Roadway Asphalt (Or Concrete) Surface And Base At An Appropriate Angle To Intercept The Trench Or Pull Box Hole. Place A Predetermined Length Of Rigid Conduit In The Hole And Drive The Conduit Into The Trench Or Hole. Install A Molded Bushing (Nonmetallic) On The Roadway End Of The Rigid, Conduit. The Top Of The Rigid Conduit Shall Be Approximately 2" Below The Roadway Surface. Fill The Hole With Loop Sealant To The Level Of The Roadway Surface. A Nonmetallic Material Should Be Used To Prevent Excessive Loop Sealant From Entering The Rigid Conduit.

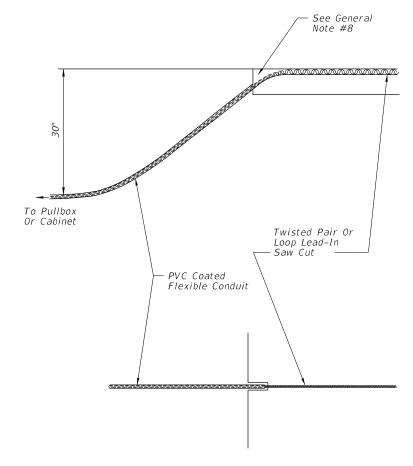

Other alternatives may be approved by the State Traffic Operations Engineer.

DESCRIPTION:

TWISTED PAIR AND LOOP LEAD-IN INSTALLATION WITHOUT CURB & GUTTER

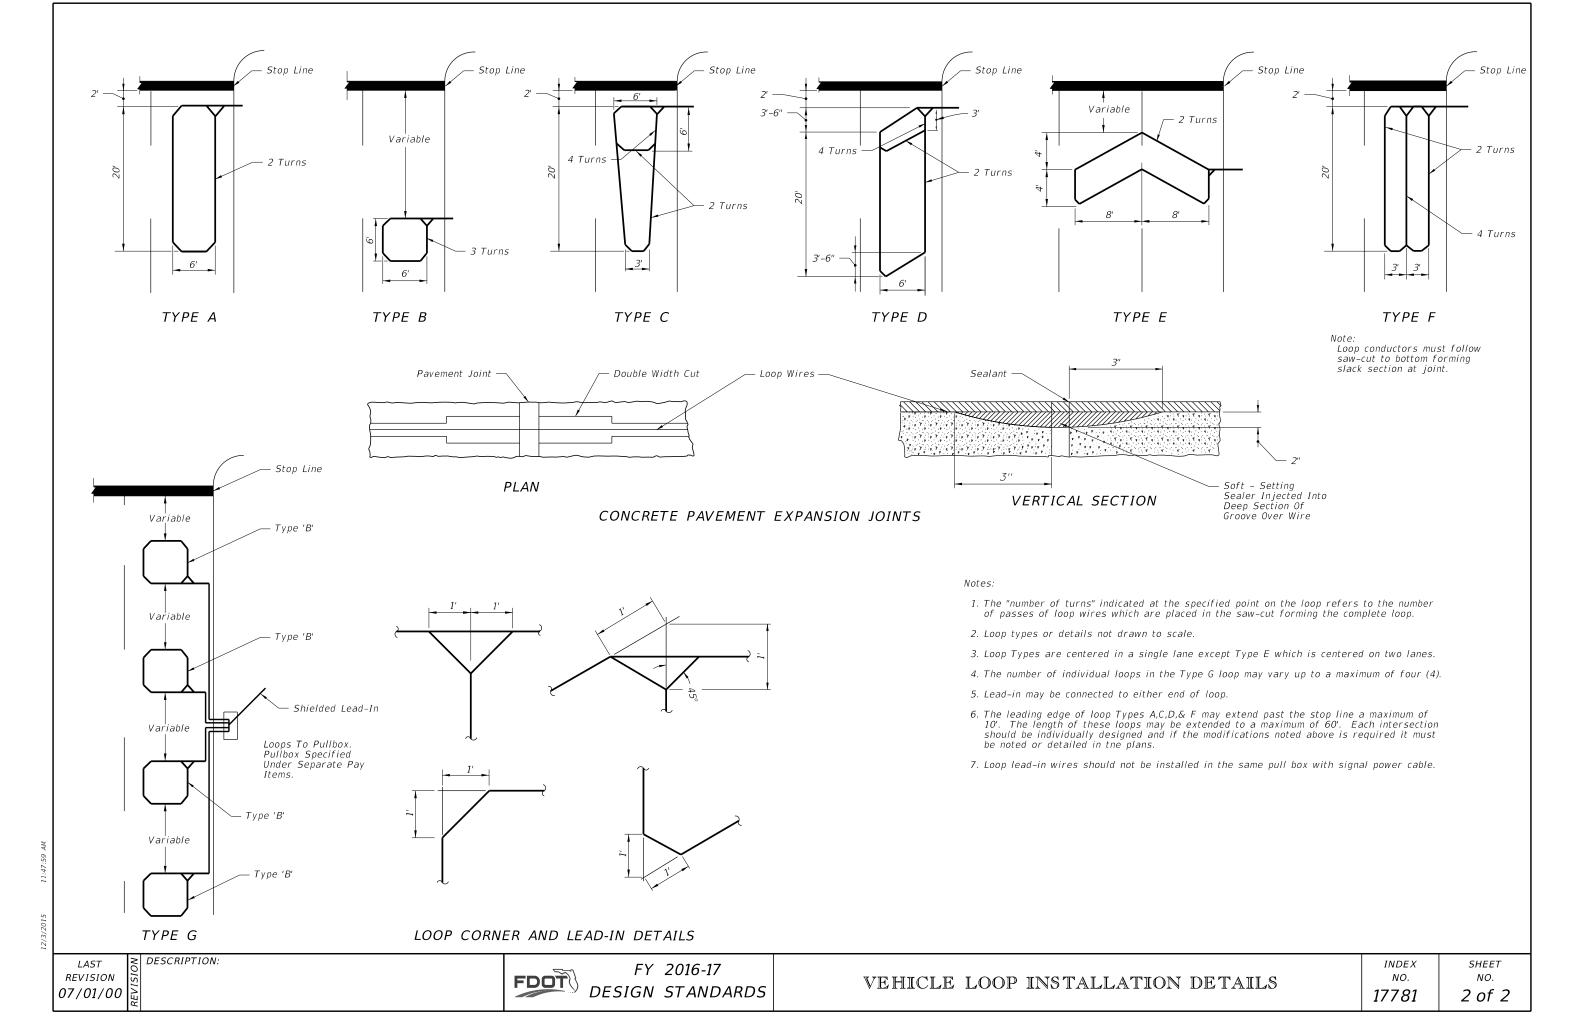

Cut A Slot In The Edge Of The Roadway Of Sufficient Size And Depth To Snugly Place The End Of The Flexible conduit. The End Of The Conduit Shall Be At Least 6" Into The Roadway And approximately 2" Below The Top Of The Roadway Surface. The Departure Angle Of The Conduit From The Roadway Shall Be 30° To 45°.

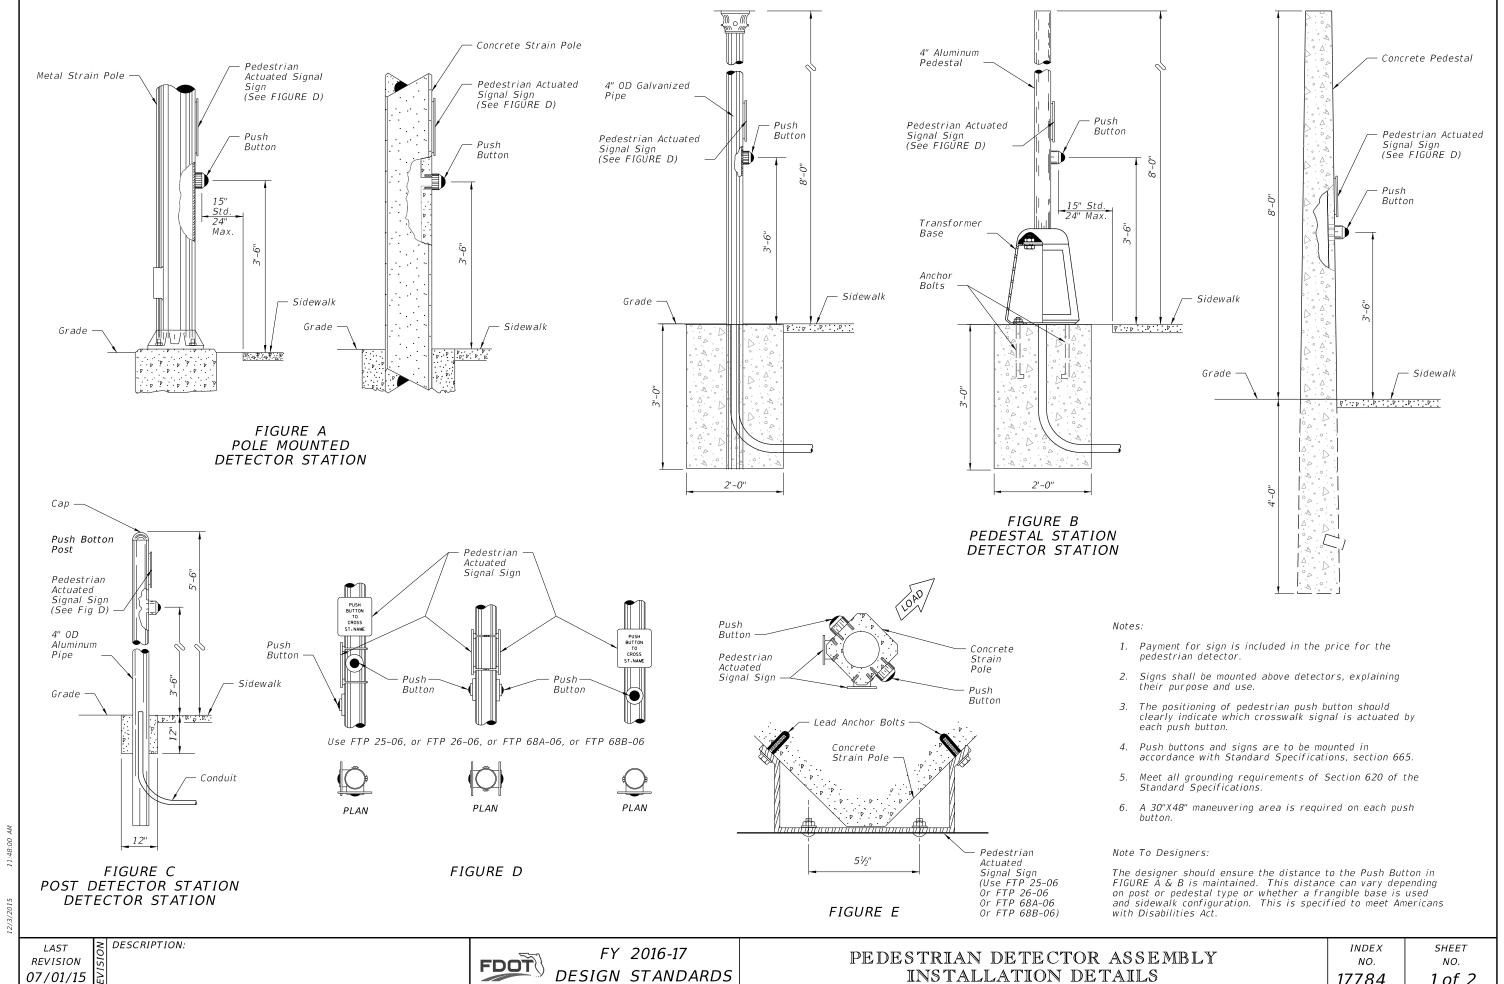

Other alternatives may be approved by the State Traffic Operations Engineer

GENERAL NOTES

- 1. If the loop lead-in is 75' or less from the edge of the loop detector to controller cabinet, continue the twisted pair to the cabinet. If the loop lead-in is greater than 75' continue the twisted pair to the specified pullbox, splice to shielded lead-in wire and continue to the controller
- 2. The width of all saw cuts shall be sufficient to allow unforced placement of loop wires or lead-in cables into the saw cut. The depth of all saw cuts, except across expansion joints, shall be 3" standard with a maximum of 4".
- 3. On resurfacing or new roadway construction projects, the loop wires and lead-in cables will be installed in the asphalt structural course prior to the placement of the final asphalt wearing course. The loop wires and lead-in cables shall be placed in a saw cut in the structural course. The depth of the cables below the top of the final surface shall comply with note 2.
- 4. A nonmetallic hold down material shall be used to secure loop wires and lead-ins to the bottom of saw-cuts. Hold down material shall be placed at approximately 12" intervals around loops and 24" intervals on lead-ins.
- 5. The minimum distance between the twisted pairs of loop lead-in wire is 6" from the loop to 12" from the pavement edge or curb.
- 6. Splice Connections in pull boxes with UL listed, watertight, insulated enclosures. Place one enclosure over the end of each conductor and place a third enclosure over the exposed end of the shielded cable.
- 7. As an alternate, a larger diameter enclosure that will accommodate both the splices of the conductors and the exposed end of the shielded cable may be
- 8. The maximum area of asphalt to be disturbed shall be 6"x 6". This area shall be restored as directed by the Engineer.

METAL POLE

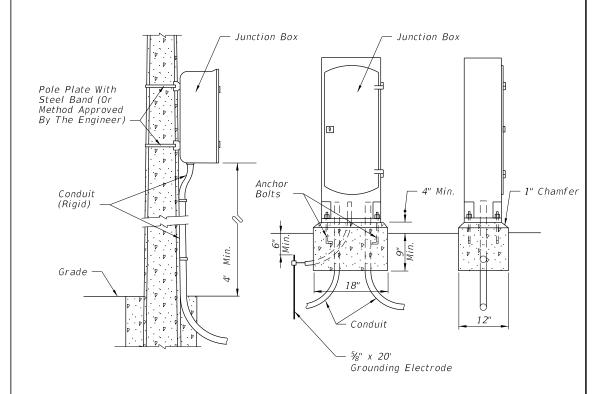

Liquidtight flexible conduit is approved for use from the electrical disconnect to the cabinet when both are installed on the same pole.

CONCRETE POLE

WOOD POLE

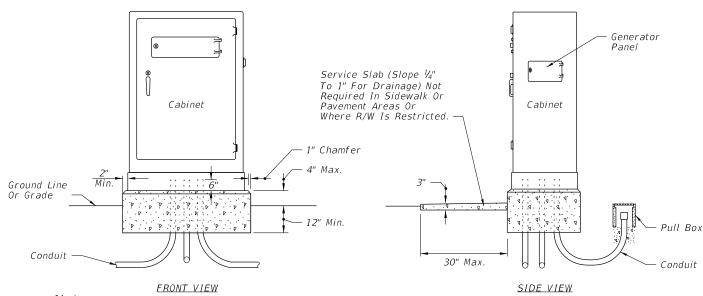

POLE MOUNTED CABINET

* If holes for cabinet mounting require relocation, original holes shall be filled in with concrete or covered with a noncorrosive cover plate.

POLE MOUNTED

INTERCONNECT JUNCTION BOX

Notes:

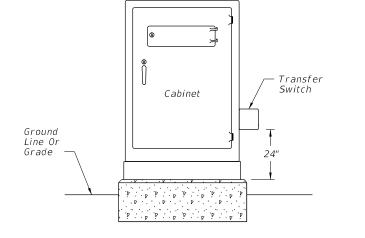

DESCRIPTION:

- 1. The number, size and orientation of conduit sweep will vary according to site condition or locations. Two spare 2" PVC conduits shall be provided in all bases. The spares shall exit in the direction of the center rear of the cabinet base, into a pullbox and capped with a weathertight fitting. If obstructions prevent the spare conduit from exiting to the rear, or the rear of the cabinet is located on the R/W line, a side exit of the spare conduits will have to be approved by the project engineer. All spare conduit sweeps shall be capped with a weatherproof fitting.
- 2. Meet all grounding rquirements of the Standard Specifications 620.
- 3. New Controller Cabinet installation shall meet the requirements of the Standard Specifications 676.

DESIGN STANDARDS

SIGNAL PLACEMENT AT RAILROAD CROSSING
(2 LANES, CURB & GUTTER)

GENERAL NOTES

RAILROAD GRADE CROSSING

TRAFFIC CONTROL DEVICES

- 1. The location of flashing signals and stop lines shall be established based on future (or present) installation of gate with appropriate track clearances.
- 2. Where plans call for railroad traffic control devices to be installed in curbed medians, the minimum median width shall be 12'-6".
- 3. Location of railroad traffic control device is based on the distance available between face of curb & sidewalk. O' to 6' Locate device outside sidewalk. Over 6' Locate device between face of curb and sidewalk.
- 4. Stop line to be perpendicular to edge of roadway, approx. 15' from nearest rail; or 8' from and parallel to gate when present.
- 5. When a cantilevered-arm flashing-light signal is used, the minimum vertical clearance shall be 17'-6" from above the Crown of Roadway to the Lowest Point of the Overhead Signal Unit.

SHEET NO. 4 of 4

TO BE USED WHERE BRIDGE OPERATORS ARE FULL TIME OR A DAILY BASIS. TO BE USED WHERE TYPE I IS NOT APPLICABLE (USUALLY WHEN THE BRIDGE OPERATOR IS "ON CALL").

LEGEND:

- ① TRAFFIC SIGNALS | Mast Arm Mounted (Off Bridge)
- ② DRAWBRIDGE SIGN | Monotube Support Mounted (On Bridge)
- 3 DRAWBRIDGE AHEAD SIGN WITH YELLOW FLASHING BEACON
- 4 STOP HERE ON RED SIGN WITH RED FLASHING BEACONS
- ENTRANCE GATE
- EXIT GATE
- 24" THERMOPLASTIC STOP BAR

W8-5 SLIPPERY WHEN WET SIGN See Note 11

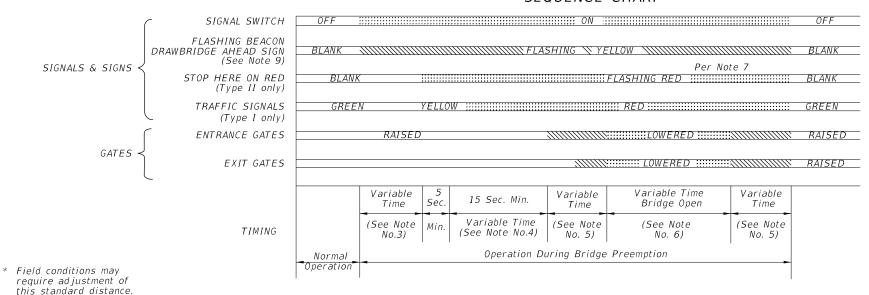

NOTES:

- 1. A bypass switch shall be installed to override each timing interval in case of a malfunction.
- 2. "STOP HERE ON RED" is omitted in Type I operation and "TRAFFIC SIGNALS" are omitted in Type II operation.
- 3. The time between beginning of flashing yellow on "Drawbridge Ahead" sign and the clearance of traffic signal to red, or beginning of flashing red should not be less than the travel time of a passenger car, from the sign location to the stop line, traveling at the 85 percentile approach speed.
- 4. Beginning of operation of drawbridge gates shall not be less than 15 seconds after steady red or 20 seconds after flashing red (Actual time may be determined by the bridge tender.)
- 5. Time of gate lowering and raising is dependent upon gate type.
- 6. Time of bridge opening is determined by the bridge tender.
- 7. Each gate shall be operated by a separate switch.

DESCRIPTION:

- 8. On each approach (Type II), all four red signals shall be on the same two circuit flashers, with the two top signals on one circuit, and the two bottom signals on the alternately flashing circuit.
- 9. A Drawbridge Ahead sign is required for both types of signal operation, However a flashing beacon shall be added to the sign when physical conditions prevent a driver traveling at the 85% approach speed from having continuous view of at least one signal indication for approximately 10 seconds.
- 10. Requirements on gate installation are contained in Section 4I of the "Manual on Uniform Traffic Control Devices".
- 11. "In accordance with Traffic Engineering Manual (Topic Number 750-000-005) Section 2.1, SLIPPERY WHEN WET SIGNS shall be placed in advance of all MOVABLE and NONMOVABLE STEEL DECK BRIDGES."
