▶ Shear Steel Required vs. Provided Computation

► Computation for Checks

CheckShearCapacity = "OK"

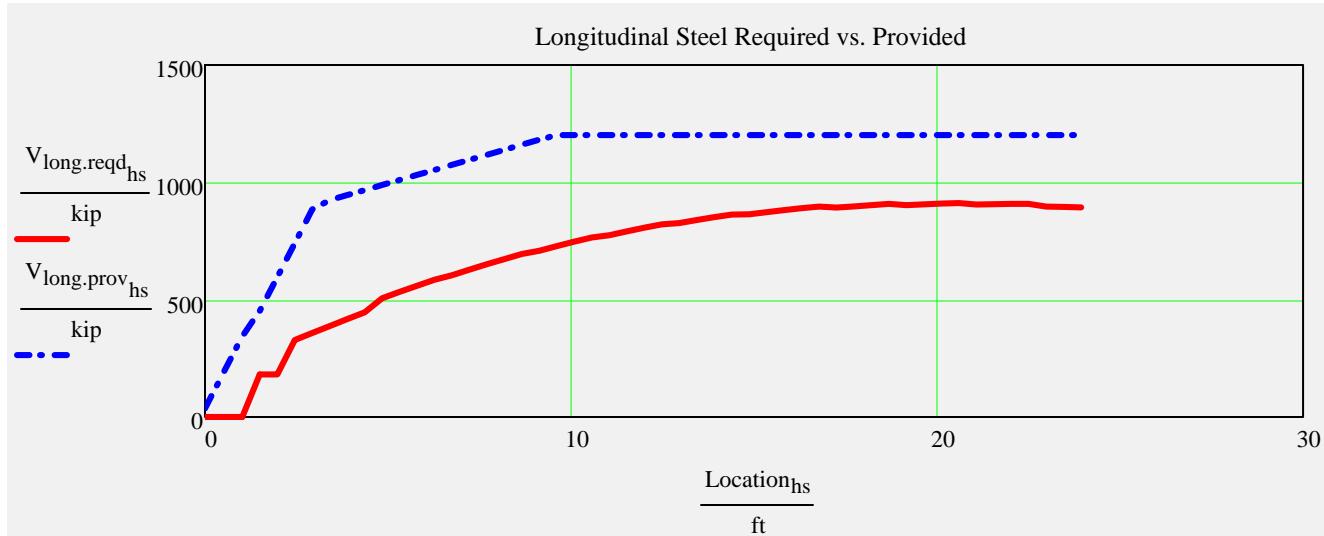

CheckMaxShearStress = "OK"

CheckStirArea = "OK"

CheckMinStirArea = "OK"

CheckMaxStirSpacing = "OK"

► Longitudinal Reinforcement

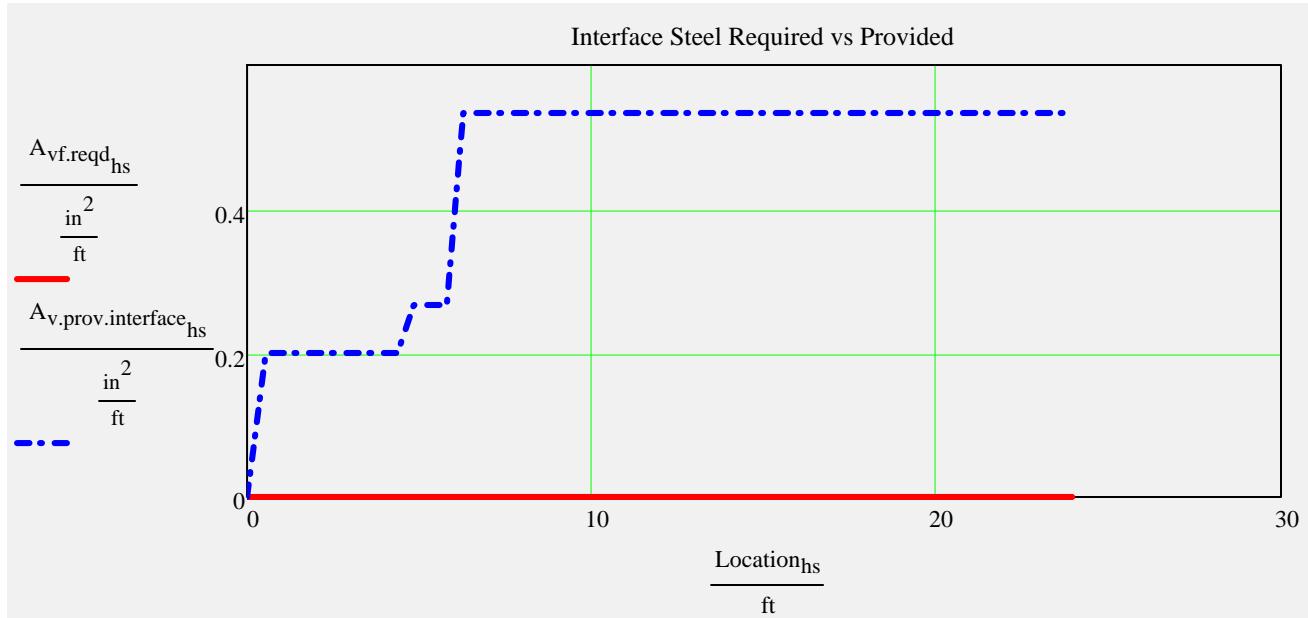

$$CR_{LongSteel}_{hs} := \text{if} \left(V_{long.reqd.hs} < .01 \text{kip}, 100, \frac{V_{long.prov.hs}}{V_{long.reqd.hs}} \right)$$
$$\min(CR_{LongSteel}) = 1.32$$

CheckLongSteel := if($\min(CR_{LongSteel}) > 1$, "OK" , "No Good, add steel!")

CheckLongSteel = "OK"

► Interface Shear Reinforcement

► Interface Steel

Typically shear steel is extended up into the deck slab.
These calculations are based on shear steel functioning as interface reinforcing.
The interface_factor can be used to adjust this assumption.

$$\max(A_{vf,min}) = 0 \cdot \frac{\text{in}^2}{\text{ft}}$$

$$\max(A_{vf,des}) = 0 \cdot \frac{\text{in}^2}{\text{ft}}$$

If max(Avf,min) or max(Avf.des) is greater than 0 in²/ft,
interface steel is required.

CheckInterfaceSpacing = "OK"

$$\text{CheckInterfaceSteel} := \text{if} \left(\frac{\text{TotalInterfaceSteelProvided}}{\text{TotalInterfaceSteelRequired} + 0.001 \cdot \text{in}^2} \geq 1, \text{"OK"}, \text{"No Good"} \right)$$

Recalculate Worksheet

► Spacing Computation

Stirrup sizes and spacings used in analysis

The number of spaces for the S4 stirrup is calculated by the program to complete the half beam length.

<u>A1 stirrup</u>	(12)	$\text{NumberSpaces} = \begin{pmatrix} 4 \\ 1 \\ 1 \\ 1 \end{pmatrix}$	$\text{A}_{\text{stirrup}} = \begin{pmatrix} 0.8 \\ 0.8 \\ 0.8 \\ 0.8 \end{pmatrix} \cdot \text{in}^2$
<u>A2 stirrup</u>	18		
<u>A3 stirrup</u>	18		
<u>S1 stirrup</u>	$18 \cdot \text{in}$		
<u>S2 stirrup</u>	18		
<u>S3 stirrup</u>	18		
<u>S4 stirrup</u>	18	8.25	$\text{EndCover} = 6.5 \cdot \text{in}$

▶ Shear Steel Required vs. Provided Computation

► Computation for Checks

CheckShearCapacity = "OK"

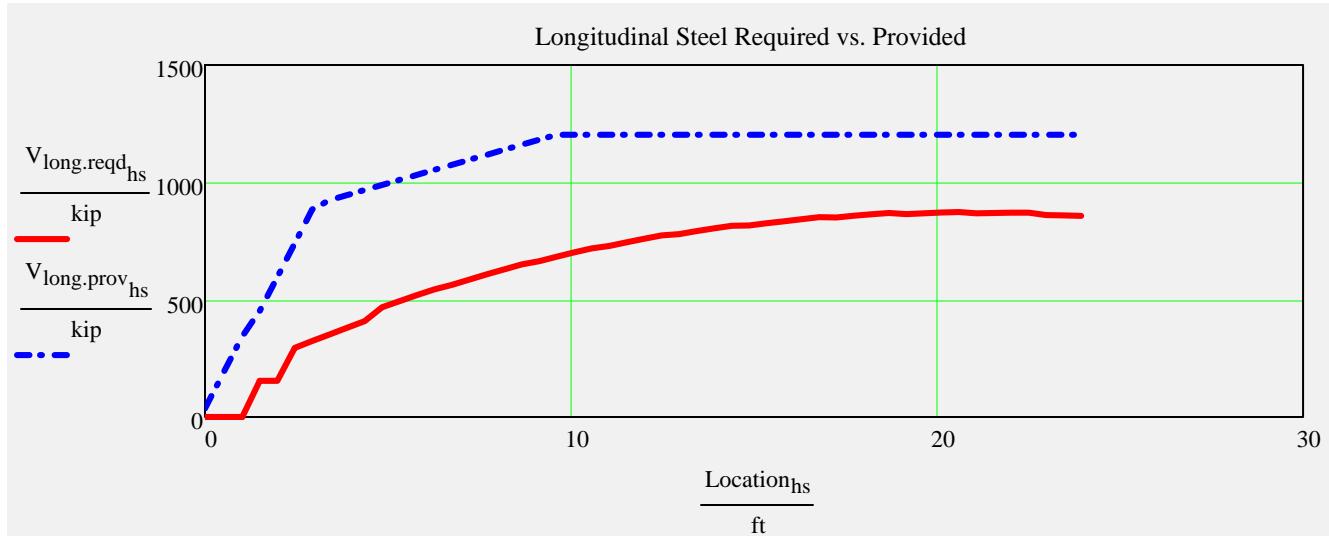

CheckMaxShearStress = "OK"

CheckStirArea = "OK"

CheckMinStirArea = "OK"

CheckMaxStirSpacing = "OK"

► Longitudinal Reinforcement

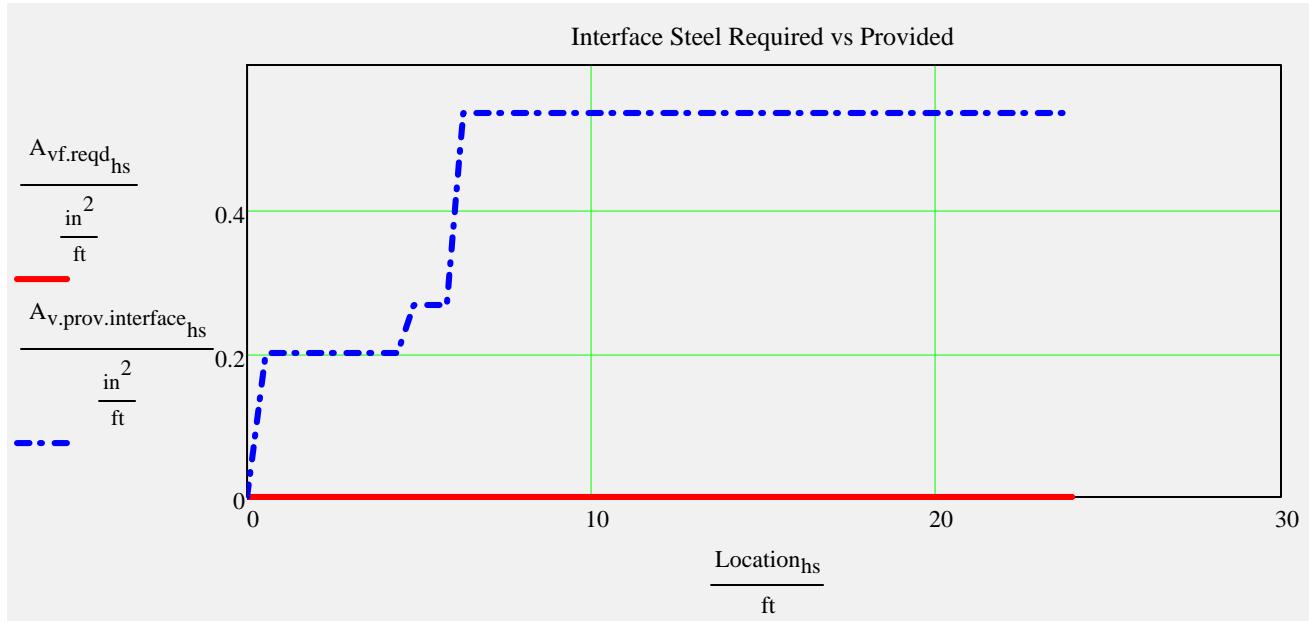

$$CR_{LongSteel}_{hs} := \text{if} \left(V_{long,reqd}_{hs} < .01 \text{kip}, 100, \frac{V_{long,prov}_{hs}}{V_{long,reqd}_{hs}} \right)$$

$$\min(CR_{LongSteel}) = 1.38$$

CheckLongSteel := if($\min(CR_{LongSteel}) > 1$, "OK" , "No Good, add steel!")

CheckLongSteel = "OK"

► Interface Shear Reinforcement

► Interface Steel

Typically shear steel is extended up into the deck slab.
These calculations are based on shear steel functioning as interface reinforcing.
The interface_factor can be used to adjust this assumption.

$$\max(A_{vf,min}) = 0 \cdot \frac{\text{in}^2}{\text{ft}}$$

$$\max(A_{vf,des}) = 0 \cdot \frac{\text{in}^2}{\text{ft}}$$

If max(Avf,min) or max(Avf.des) is greater than 0 in²/ft,
interface steel is required.

CheckInterfaceSpacing = "OK"

$$\text{CheckInterfaceSteel} := \text{if} \left(\frac{\text{TotalInterfaceSteelProvided}}{\text{TotalInterfaceSteelRequired} + 0.001 \cdot \text{in}^2} \geq 1, \text{"OK"}, \text{"No Good"} \right)$$

CheckInterfaceSteel := if (substr(BeamTypeTog, 0, 3) = "FLT", "N.A.", CheckInterfaceSteel) CheckInterfaceSteel = "OK"

Anchorage Reinforcement and Maximum Prestressing Force

Was FDOT Design Standard splitting reinforcing used? (bars Y,K, & Z)

*if yes-> checks max allowable standard prestress force
if no-> checks stirrup area given input prestress force*

► Splitting (Bursting) Resistance

CheckSplittingSteel = "N.A."

CheckMaxPrestressingForce = "OK"

Summary of Design Checks

check₀ := AcceptAASHTO = "OK"
