266 Bicycle and Pedestrian Bridges

266.1 General

A bridge, overpass, or underpass may be necessary to provide pedestrian and bicycle continuity to sidewalks, bicycle lanes and shared use paths. Provide accommodations for bicyclists on pedestrian bridges; i.e., provide an alternative to stairs.

See *FDM 222, 223, and 224* for information on bicycle and pedestrian facilities.

See *Chapter 10* of the *Structures Design Guidelines (SDG)* for information on pedestrian bridges.

266.2 Design Criteria

Design overpasses and bridges in accordance with the following criteria:

(1) The minimum clear width for pedestrian bridges is:

   (a) 8 feet on a pedestrian structure,
   (b) 12 feet on a shared use path structure, or
   (c) If the approach sidewalk or path is wider than these minimums, match the approach width. The desirable clear width should include an additional 2-foot wide clear area on each side.

(2) Vertical clearance criteria is found in *FDM 260.6*. Account for future widening of the roadway below when determining required lateral offset.

(3) Bridge ramps should be provided at all separated pedestrian structures when required to maintain vertical grades <5%. Consider providing stairways in addition to ramps.

   (a) Ramps are to comply with ADA requirements. Provide full-length pedestrian ADA handrails on both sides of pedestrian ramps. Additional information is provided on the website: *Production Support Office - Accessibility Issues (ADA) Website*
   (b) Design ramps with the least possible grade, but in no case more than 8.33% with a maximum 30-inch rise. Provide level landings that are 5-feet long at the top, intermediate, and bottom portions of the ramp.

(4) Provide railing and fencing options in accordance with the *SDG, Chapter 10*. 

---

266-Bicycle and Pedestrian Bridges
(a) See *FDM 222, Figures 222.4.6* through 222.4.8 for vehicular fencing options.

(b) Provide full or partial screening on pedestrian bridges crossing FDOT right of way in order to reduce the likelihood of objects being dropped or thrown onto the roadway below. See *Figure 266.2.1* for example of full screening.

(c) Pedestrian bridges on FDOT right of way but not crossing FDOT right of way are not required to be screened.

(d) Check with local authorities for guidance on screening for FDOT pedestrian bridges crossing local rights of way.

(e) The use of chain link fence on ramps of the pedestrian bridges will be determined on a project-by-project basis.

### Modification for Non-Conventional Projects:

<table>
<thead>
<tr>
<th>Add the following sentence:</th>
</tr>
</thead>
<tbody>
<tr>
<td>(f) When fencing is required, the limits of fencing is from the beginning of the approach slab at Begin Bridge to the end of the approach slab at End Bridge, unless otherwise indicated in the RFP.</td>
</tr>
</tbody>
</table>

See *FDM 121* for review requirements based on pedestrian bridge structure category.

Pedestrian underpasses are generally undesirable; however, if one is provided, the geometrics and lighting requirements should be discussed with the Department Project Manager and the District Pedestrian/Bicycle Coordinator. Local law enforcement personnel may need to be consulted to assure public safety, emergency accessibility and other desirable features.
* Clear width in compliance with FDM 266.2.

1. Pedestrian Handrails may be required. Handrails must be installed per the requirements of the Americans with Disabilities Act (ADA) Standards for Transportation Facilities.

2. Other Superstructure Configurations may be used provided an 8 ft. minimum headroom is maintained.
266.3 Prefabricated Steel Truss Bridges on FDOT Projects

In many situations it makes good engineering and economic sense to utilize prefabricated steel truss bridges for pedestrian crossings. These bridges can be stand-alone structures or a hybrid structure with adjoining spans of other types (FIB, deck slab, steel I-girder, etc.). The provisions of this article apply only to the spans on a bridge that are comprised of prefabricated steel trusses. The term steel truss bridge as applied in this article refers only to stand-alone steel truss structures or to the steel truss spans of a hybrid bridge structure.

The Department may elect to use prefabricated truss bridges on FDOT projects if the following conditions are met:

1. The steel truss span lies within a tangent horizontal alignment.
2. The maximum length of the steel truss span does not exceed 200 feet.
3. The width of the steel truss span is constant.
4. The steel truss span supports have a skew angle not to exceed 20°.

When these criteria are not met provide a complete set of bridge details in the plans.

266.3 Prefabricated Steel Truss Bridges on FDOT Projects

Prefabricated steel truss bridges can be stand-alone structures or a hybrid structure with adjoining spans of other types (FIB, deck slab, steel I-girder, etc.). The provisions of this article apply only to the spans on a bridge that are comprised of prefabricated steel trusses. The term steel truss bridge as applied in this article refers only to stand-alone steel truss structures or to the steel truss spans of a hybrid bridge structure.

See RFP for requirements.
266.3.1 Qualification of Prefabricated Steel Truss Pedestrian Bridge Producers

Use prefabricated steel truss pedestrian bridges from providers included on the Department’s List of Qualified Metal Fabrication Facilities. For information on the facility qualification process see Articles 11.1.5 and 11.1.6 of the FDOT Materials Manual.

266.3.2 Design and Detailing Responsibilities

The project Engineer of Record (EOR) is responsible for the design and detailing of the steel truss bridge substructure and foundation including end bents, piers, and pile foundations or spread footings. The project EOR is also responsible for the design and detailing of approach structures (non-steel truss bridge spans, walls, ramps, steps, approach slabs, etc.).

The Contractor’s EOR is responsible for the design and detailing of the steel truss bridge superstructure including trusses, deck, bridge railing, floor beams, bridge joints, bearing assemblies and anchor bolts.

Modification for Non-Conventional Projects:

Delete FDM 266.3.2 and replace with the following:

266.3.2 Design and Detailing Responsibilities

The Engineer of Record (EOR) is responsible for the design and detailing of the steel truss bridge foundation, substructure and superstructure. The EOR is also responsible for design and detailing of approach structures (non-steel truss bridge spans, walls, ramps, steps, approach slabs, etc.). Include the steel truss bridge superstructure including trusses, deck, bridge railing, floor beams, bridge joints, bearing assemblies and anchor bolts as part of the superstructure component submittal.
266.3.3 Plans Development

To allow equal opportunity for all qualified pedestrian bridge producers to participate, the pedestrian bridge plans should have the flexibility to accommodate multiple alternate superstructure designs. When a prefabricated steel truss pedestrian bridge is warranted, adhere to the following procedure when developing the plans:

(1) Using *Figures 266.3.1, 266.3.2, and 266.3.3*, coordinate with the District Project Manager to select allowable truss configurations, truss member shapes, and bridge cross sections. A box truss bridge cross-section is required for spans greater than 150 feet.

If project specific aesthetic requirements warrant the use of truss configurations not included in *Figure 266.3.1* the project EOR can specify additional truss configurations. However, a minimum of two steel truss pedestrian bridge producers must be capable of satisfying the aesthetic requirements.

(2) Develop a Plan and Elevation sheet and Bridge Typical Section to be submitted with the BDR/30% plans.

(3) After the BDR/30% plans have been approved, send out a Prefabricated Pedestrian Bridge Invitation to Participate (ITP) to all prefabricated pedestrian steel truss bridge producers on the Department’s List of Qualified Fabrication Facilities. Send the ITP through registered mail with return receipt to confirm delivery. Contact information for all qualified producers can be found at the following web address:

The ITP is intended to solicit qualified producers for information required to design the foundation and substructure of the steel truss pedestrian bridge. The ITP cover letter should contain the following elements with links to websites as appropriate and applicable:

- Introduction with brief project description
- Project Requirements
  - Design Specifications Requirements
  - Construction Specifications Requirements
  - Design Standards Requirements
  - Bridge Typical Section
  - Allowable Truss Options
- Painting Requirements
- Pedestrian Fence/Railing Requirements
- Vehicular Loading Requirements
- Project Specific Aesthetic Requirements
- Project Geometry including Vertical Clearance Requirements for Each Span

- Participation Requirements
- Submittal Requirements

Include the following items in the ITP package:

- Hard copy:
  - Invitation to Participate Cover Letter
  - Project Location Map
  - Plan and Elevation
  - Bridge Typical Section and Pedestrian Fence Concept
  - Pedestrian Bridge Data Sheet

- Electronic files:
  - PDF file with all of the above
  - Pedestrian Bridge Data Sheet in CADD format

For a sample Prefabricated Pedestrian Bridge ITP complete with all hard copy attachments see Example 266.3.1. To aid plan development CADD cells for the Pedestrian Bridge Data Sheet and Plan and Elevation sheet (2 of 2) are available in the FDOT Structures Cell Library. For the current FDOT CADD Software downloads follow the link below:

(4) Upon delivery the pedestrian bridge, producers must acknowledge receipt of the ITP package.

(5) In order to be eligible to participate in the project the pedestrian bridge producers must provide a completed Pedestrian Bridge Data Sheet as outlined in the ITP on or before the specified due date (prior to 60% plans submittal). The completed Data Sheets must be electronically signed and sealed by the pedestrian bridge producer’s EOR for inclusion in the final plan set.
The project EOR assigns a unique sheet number to each data sheet. The sheet numbers will be identified with the prefix BP (e.g., BP-1, BP-2, BP-#) and the data sheets will be placed at the end of the numbered sequence of the bridge plans. This will allow the Pedestrian Bridge Data Sheets to have independent sheet numbers as plan development progresses.

(6) After all ITP responses are received the project EOR must design and detail the foundation and substructure to accommodate the superstructure designs of all eligible pedestrian bridge producers. The design must envelope the most extreme loading conditions and geometry of all alternates.

(7) A Public Interest Finding is required for Federal Aid projects when only one Interest for Participation letter is received.

Include the following notes in the plans:

• **Eligible Steel Truss Pedestrian Bridge Producers**

  Included in this plan set are Pedestrian Bridge Data Sheets submitted by bridge producers eligible to participate in this project. Producers who failed to submit a data sheet are excluded from participation. No Cost Savings Initiative Proposal will be accepted for the truss superstructure portion of the project. Contact information for the eligible producers is included in the data sheet.

• **Shop Drawing Submittal**

  Prior to fabrication the Contractor’s EOR must submit signed and sealed superstructure shop drawings, technical specifications, and design calculations to the Engineer for review and approval.

(8) Include the following Pay Item note in the plans:

• **Prefabricated Steel Truss Pedestrian Bridge Span**

  Prefabricated Steel Truss Pedestrian Bridge Span will be paid for at the contract unit price per square foot of deck area under Pay Item No. 460-7 Prefabricated Steel Truss Pedestrian Bridge, SF. This pay item includes furnishing and installing the prefabricated steel truss pedestrian bridge superstructure including steel trusses, floor system, deck, bearing assemblies, deck joints, and bridge railing/fencing. Payment for this pay item is based on the plan quantity. Portions of pedestrian bridge outside the limits of the steel truss span are paid for under individual pay items.

(prepare on Department letterhead)

FLORIDA DEPARTMENT OF TRANSPORTATION

DISTRICT 3

PREFABRICATED PEDESTRIAN BRIDGE

INVITATION TO PARTICIPATE

Project: CR 250 over Ruby Creek Pedestrian Bridge

Financial Project Number: 217664-1-52-01

Federal Aid Project Number(s): SF2-349-R

Date: March 15, 2011

Introduction:

The Florida Department of Transportation is currently preparing bid documents for the construction of a steel truss pedestrian bridge adjacent to County Road 250 crossing Ruby Creek in Jefferson County. The superstructure of the proposed bridge is to be provided by a steel truss pedestrian bridge producer who is prequalified to work on FDOT projects. This invitation to participate is being sent to all prequalified producers to solicit information needed by the project EOR to design the foundation and substructure of the proposed bridge. Enclosed are the following materials:

- Hard Copy
  - Project location map
  - Bridge Typical Section and Pedestrian Fence Concept
  - Plan and Elevation (P&E) (2 sheets)
  - Pedestrian Bridge Data Sheet

- Electronic
  - PDF file with all of the above
  - Pedestrian Bridge Data Sheet in CADD format
Example 266.3.1 Sample Steel Truss Pedestrian Bridge Plans, Sheet 2 of 8

Project Requirements:
(1) Design Specifications: 
*FDOT Structures Design Guidelines (SDG)* Article 10.4. 

(2) Construction Specifications: 
*FDOT Standard Specifications for Road and Bridge Construction* 
http://www.fdot.gov/programmanagement/

(3) Standard Plans: 
*FDOT Standard Plans* 
http://www.fdot.gov/design/standardplans

(4) Allowable Truss Options: Allowable Truss options shown on P&E sheet 2 of 2 (Attached).

(5) Paint: Paint structural steel in accordance with *Sections 560* and *975* of the *Standard Specifications*. Paint structural steel with a high performance top coat system. The color of the finish coat to be Federal Standard No. 595, Color No. 36622.

(6) Pedestrian Fence: Bridge Fence consistent with bridge rail concept and *SDG Article 10.12.*

(7) Vehicular Loading: Vehicular Loading per *AASHTO LRFD Guide Specifications* for the Design of Pedestrian Bridges is not required.

(8) Geometry: For project geometry see attached P&E sheets.

Participation:
To be eligible to participate on this project pedestrian bridge producers must:
- Acknowledge receipt of this ITP
- Be on the FDOT List of Qualified Fabrication Facilities.
- Submit a response to this ITP on or before June 10, 2011 to the project EOR.

Submittal:
Provide completed pedestrian bridge data sheet as follows:
- Bearing Plate Dimensions Table – for each span provide bearing dimensions as shown to the nearest 1/8th inch.
Example 266.3.1 Sample Steel Truss Pedestrian Bridge Plans, Sheet 3 of 8

- Bearing Plate Locations & Bridge Seat Elevations Table – for each substructure unit provide dimensions as shown to the nearest 1/8\textsuperscript{th} inch and bridge seat elevation to the nearest 0.001 feet.

- Bridge Reactions Table – for each span provide loads as indicated to the nearest 0.1 kip.

- Company Contact Information Table – in the contact information block provide company name, address, contact person, phone number, and e-mail address.

- Florida PE Seal and Signature – provide seal and signature of Florida PE responsible for the work.

Submit response to:

John Doe, PE  
XYZ Engineers, Inc.  
123 East Main Street  
Tampa, Florida 33607

By submitting a response to this invitation to participate the pedestrian bridge producer is agreeing to satisfy all project requirements listed above if selected.
