320 Stormwater Pollution Prevention Plan
(SWPPP)

Modification for Non-Conventional Projects:

Delete FDM 320 and see RFP for requirements.

320.1 General

The Stormwater Pollution Prevention Plan (SWPPP) sheets document the designer's site evaluation and selection of control measures and other items to comply with the terms and conditions of the State of Florida Department of Environmental Protection (DEP) Generic Permit for Stormwater Discharges from Large and Small Construction Activities (DEP Generic Permit) discussed in FDM 251.

For an example of SWPPP sheets on a major reconstruction project, see Exhibit 320-1. Additional guidance for developing a SWPPP may be found in the DEP SWPPP template, found on the DEP web page at:

http://www.dep.state.fl.us/water/stormwater/npdes/swppp.htm

320.2 Narrative Description

The SWPPP sheets include a narrative that refers to other documents such as the Standard Specifications or the Standard Plans as necessary. Use the following outline to prepare the narrative:

(1) Site Description
   (a) A Description of the Construction Activity
   (b) Sequence of Major Soil Disturbing Activities
   (c) Area Estimates (The total project area and the area expected to be disturbed.)
   (d) Runoff Data consisting of:
        i. Rational runoff coefficient before, during, and after construction,
        ii. The size of the drainage area for each outfall,
        iii. The location of each outfall, in terms of latitude and longitude (to the nearest 15 seconds),
iv. Existing data describing the soil or the quality of discharge from the site

(e) Site Map (Include a narrative as described in FDM 320.3)

(f) Receiving Waters (The name of the receiving waters for each outfall and the wetland area on the site.)

(2) Controls

(a) Erosion and Sediment Controls
   i. Stabilization Practices
   ii. Structural Practices

(b) Stormwater Management

(c) Other Controls
   i. Waste Disposal
   ii. Off-Site Vehicle Tracking & Generation of Dust
   iii. State or Local Regulations
   iv. Application of Fertilizers and Pesticides
   v. Toxic Substances

(d) State and Local Plans

(3) Maintenance

(4) Inspection

(5) Non-Stormwater Discharges

The sheets may also include supplemental design details and plan views of the location of the controls. Additional information for preparing the SWPPP sheets can be found in the State of Florida Erosion and Sediment Control Designer and Reviewer Manual.

320.3 Site Map

Show the following information on a site map:

(1) Drainage patterns

(2) Approximate slopes

(3) Areas of soil disturbance

(4) Areas that are not to be disturbed

(5) Locations of controls identified in the plan

(6) Areas that are to be stabilized against erosion

(7) Surface waters (including wetlands)
(8) **Locations where stormwater is discharged to a surface water**

The above information is typically shown on other sheets within a set of construction plans. Prepare a narrative description of the site map which identifies the construction plan sheets where the site map information required by the DEP Generic Permit can be found.

The locations of the temporary controls may be shown on SWPPP sheets, Erosion Control sheets, Plan-Profile sheets, or Temporary Traffic Control (TTC) Plan sheets. For projects where plan view sheets are not available, summarize the locations of the controls in a tabular format.

If an optional Drainage Map is included in the construction plans, then the drainage patterns will be shown on it. If the Drainage Map is not included, prepare a topographic map (for example, a USGS quadrangle map) showing contour lines. This map will supplement the construction plan sheets that show the other site map requirements. The supplemental site map may use photography (aerial or other). Include this supplemental map in the SWPPP sheets.

### 320.4 **Controls**

The SWPPP must include a description of the controls that will be implemented at the construction site. For each of the major activities identified in *Part 1.b* of the *Narrative*, describe the timing of the implementation of control measures during the construction process. Also describe the stormwater management measures that will be installed during construction to control pollutants in the stormwater discharges that will occur after construction.

Details should be prepared for all controls that are not detailed in the *State of Florida Erosion and Sediment Control Designer and Reviewer Manual*. The details should show the work intended, where and how the control is to be placed, and any other special design details. Any Technical Special Provisions required by the erosion control items of work should be prepared for the specification package.

The narrative for some of the other controls will be supplied by the contractor at the preconstruction conference. A plan for off-site vehicle tracking is an exception and must be included in the SWPPP prepared during design.

Any Water Management District or Local Water Management District permits obtained in connection with the project should be noted.
320.5  Maintenance, Inspection and Non-Stormwater Discharges

Include a description of any maintenance requirements that are not stated in the standard specifications. Include the inspection requirements, which will be either requirements of the DEP or the applicable requirements of another regulatory agency, whichever is more stringent. If special procedures have been developed to minimize turbidity associated with normal construction dewatering, include a description of those procedures.

Special monitoring requirements described in the DEP Generic Permit may apply where the project discharges to waters listed in Section 303(d) of the Clean Water Act. Consult with the district environmental permitting staff to determine if the monitoring requirements apply. If applicable, describe the special monitoring requirements in the inspection section of the narrative.
The following narrative of the stormwater pollution prevention plan contains references to the standard specifications for road and bridge construction, the standard plans, and other sheets of these construction plans. The first sheet of the construction plans (called the key sheet) contains an index to the other sheets. The complete stormwater pollution prevention plan includes several items: this narrative, the documents referenced in this narrative, the contractor's approved erosion control plan required by specification section 104, and reports of inspections made during construction.

1. Nature of Construction Activity:

The project is the reconstruction of SR 007 (James Bond Boulevard) to a major urban roadway. This involves constructing a roadway surface, curb and gutter, sidewalk, underground storm drain systems, and stormwater management facilities. The project extends from north of Paul Russell Road to Perkins Street, a distance of approximately 11 miles.

1b. Sequence of Major Soil Disturbing Activities:

In the sediment and erosion control plan, provide a detailed sequence of construction for all construction activities. Follow the sequence of major activities described below. Unless a sequence is proposed that is equal or better at controlling erosion and trapping sediment and is approved by the engineer.

1a. Site Description:

There are 4 outfalls.

#1 Description: Existing Pond at Laura Lee.

Location: Latitude 30° 24' 30" N, Longitude 84° 24' 30" W. Est. drainage area size: 33.6 acres. Receiving water name: Not listed.

#2 Description: Pond 1. This discharges to the storm drain system that runs under orange avenue. This stream in turn discharges to the box culvert at STA 531+00.

Location: Latitude 30° 24' 45" N, Longitude 84° 17' 00" W. Est. drainage area size: 7.3 acres. Receiving water name: East ditch.

#3 Description: Box Culvert at STA 531+00.

Location: Latitude 30° 24' 45" N, Longitude 84° 17' 00" W. Est. drainage area size: 4.2 square miles. Receiving water name: East ditch.

#4 Description: Pond 2. This discharges to the SR 007 Storm Drain System that drains to the box culvert at STA 531+00.

Location: Latitude 30° 25' 00" N, Longitude 84° 17' 00" W. Est. drainage area size: 15.4 acres. Receiving water name: East ditch.

1c. Area Estimates:

Total site area: 396 acres. Total area to be disturbed: 196 acres.

1d. Runoff Data:

Runoff coefficients:

Before: 0.62
During: Varies from 0.62 to 0.76
After: 0.76

Soils data: the results of the soil borings along the roadway are shown in the roadway soil survey sheet(s). The results of soil borings done in the ponds are shown on the pond detail sheets. The numbers for these are identified on the key sheet of these construction plans. In general, the soils are clayey sands.

1e. Site Map:

The construction plans are being used as the site maps. The location of the required information is described below. The sheet numbers for the plan sheets referenced are identified on the key sheet of these construction plans.

* Drainage Patterns: the drainage basin divides and flow directions are shown on the drainage maps. The back of sidewalk profile sheets show overland flow direction at the right of way line. The arrows above and below the profile represent the flow direction at the left and right property line, respectively. Arrows pointing to the profile indicate runoff coming to the site. Pointing away from the site indicate runoff leaving the site.

Approach slopes: the slopes of the site can be seen in the cross section sheets and the plan-profile sheets.

Areas of soil disturbance: the areas to be disturbed are indicated on the plan-profile sheets, the cross section sheets, and the pond detail sheets. Any areas where permanent features are shown to be constructed above or below ground will be disturbed.

Areas not to be disturbed: essentially the whole project will be disturbed during construction.

Locations of temporary controls: these are shown on the erosion control sheets except for the controls associated with the box culvert replacement which are shown on the box culvert construction detail sheet. Tables providing summaries of temporary erosion control items are provided in the summary of quantity sheets.

Locations of permanent controls: the stormwater ponds are the primary permanent stormwater management controls. These are shown on the pond detail sheets.

Areas to be stabilized: temporary stabilization practices are shown in the same location as the temporary controls mentioned above. Permanent stabilization is shown on the typical section sheets, the plan-profile sheets, and the pond detail sheets.

Surface waters: the only surface water within the site is the East ditch, which flows through the culvert at station 353+00. This is located on the plan-profile sheets and the box culvert construction detail sheet.

Discharge points to surface waters: there is only one. This is receiving water name: East ditch.

1f. Receiving waters:

See item 1d for the outfall locations and receiving water names. There are no wetland areas on the project site.
