

2018 Child Restraint Survey Final Report

**Prepared for:
Florida Department of Transportation;
State Safety Office**

**Prepared by:
Preusser Research Group, Inc.**

July 5, 2018

Protecting Children Riding in Passenger Vehicles

Child safety seats have been shown to reduce fatal injury by 71 percent for infants (under 1-year old) and by 54 percent for toddlers (1 through 3 years old) in passenger cars. The corresponding reductions in light trucks are 58 percent and 59 percent respectively. Among children under 5 years old, an estimated 252 lives were saved nationwide in 2014 by restraint use (National Highway Traffic Safety Administration [NHTSA], 2014).

Data also shows that older children and adults alike are far more likely to survive a severe crash with less injury when wearing a safety belt (Centers for Disease Control [CDC], 2017).

Florida’s Child Restraint Laws

Florida law (Florida Statute 316.613) requires that children 5 years of age or younger must be properly restrained no matter where they are sitting in the vehicle. Children through age 3 must be secured in a separate carrier or a vehicle manufacturer's integrated child safety seat. For children ages 4 through 5 years, a separate carrier, an integrated child safety seat, or a safety belt may be used.

Child safety experts recommend that children aged 12 and under should ride properly buckled in the back seat. Airbags can kill young children riding in the front seat. A rear facing car seat should never be used in the front seat or in front of an airbag.

Types of Restraint

Type of restraint is determined based on age, weight, and height of the child. The device manufacturer provides directions that should be followed. Car seat inspection stations are located throughout Florida.

Information on types of restraint and experts who can help answer questions on proper seats and correct installation can be located at the Florida Department of Transportation’s web portal:

<http://www.floridaoprc.ce.ufl.edu/oprc/>

FLORIDA LAW PROTECTING CHILD PASSENGERS

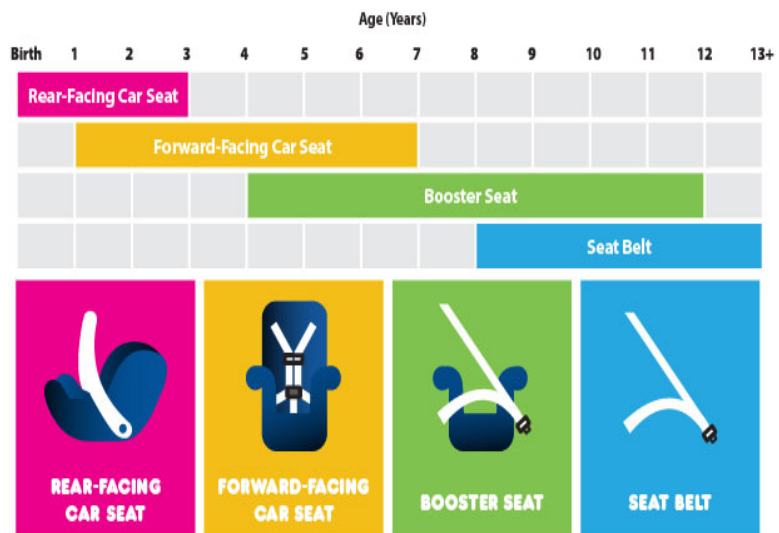

Statute 316.613

Florida law requires all children from birth through age 3 be placed in a restraint device that is a separate carrier or a vehicle manufacturer’s integrated car seat.

Florida law requires all children 4 through 5 years of age to ride in a separate carrier, an integrated child seat or child booster seat, or safety belt.

The Florida Department of Transportation and the Florida Department of Highway Safety and Motor Vehicles recommends keeping children ages 12 and under in the back seat.

What is the fine for a child restraint violation? Fines start at \$60.00 and 3 points, but the dollar amount can vary by local jurisdiction.

2018 Child Observational Survey

The Florida Department of Transportation (FDOT) contracting with Preusser Research Group, Inc. (PRG) developed an observational survey during the Spring of 2017 that estimates child restraint use across the state of Florida. PRG replicated the survey in the Spring of 2018. The survey, implemented throughout the month of April 2018, included one-hour observation periods across 200 distinct sites. These 200 sites were spread across 20 counties (10 per county). The 20 counties covered the 10 television/radio Designated Market Areas (DMA) serving the State of Florida. The two most populated counties in each DMA were selected.

Trained data collectors were positioned near daycare centers, shopping centers, recreational areas, and fast food restaurants. These sites were selected to maximize the number of children in the vehicles observed. The data collected included: types of child restraint used in rear and front seats; estimated age of child passenger(s) (ages: 0-3; 4-5; 6-12); driver characteristics (sex, age, race); and vehicle type (car, SUV, pickup, van). A copy of the data collection form used by observers is appended to this Final Report.

2018 Survey Results

Observers collected data on 5,013 children riding in 4,435 passenger vehicles. In most cases, information was collected on 1 child per vehicle. However, observers could collect information on up to 2 children per vehicle. **The survey indicated that 84 percent (+/- 1.02; 95% confidence) of children, ages 0-12, were restrained across the state of Florida.**

Observers estimated an age category for child passengers. Age category was recorded for 5,003 of the 5,013 observed children. The survey results indicated that youngest children (ages 0-3; n=1,403) were restrained most often (**94%**). Children ages 4 to 5 (n=1,259) were observed restrained least often (**78%**). Older children (ages 6-12; n=2,341) were restrained **81 percent** of the time.

RESTRAINT USAGE BY AGE CATEGORY

2018 Florida Observational Survey for Child Restraint Use

Observed restraint type by age category indicates that children, by and large, use the proper restraint type when not unrestrained. It is important to note that an unobtrusive, observational survey like the one presented here cannot tell if a child is **correctly** using a child safety seat or booster seat. Also, there may be cases where booster seat usage is recorded as “seat belted” due to not detecting a backless booster seat.

2018 RESTRAINT TYPE/USE BY AGE CATEGORY

	<u>Ages 0-3</u> (n=1,403)	<u>Ages 4-5</u> (n=1,259)	<u>Ages 6-12</u> (n=2,341)	<u>Ages 0-12</u> (n=5,003)
 Rear-Facing Carrier	31% (n=435)	0% (n=2)	0% (n=0)	9% (n=437)
 Forward-Facing Car Seat	62% (n=868)	28% (n=352)	0% (n=3)	25% (n=1,223)
 Booster Seat	0% (n=6)	30% (n=375)	2% (n=47)	9% (n=428)
 Vehicle Safety Belt	1% (n=13)	20% (n=248)	79% (n=1,853)	42% (n=2,114)
 No Restraint Used	6% (n=81)	22% (n=282)	19% (n=438)	16% (n=801)

Where are Children Positioned and How is that Associated with Restraint Use?

Younger children tend to be in the back seat, but as they grow older, they begin to migrate into the front of the vehicle. The following diagram shows the proportion of children observed in the front and the back seats of passenger vehicles and shows belt use in the front versus the rear. The survey found that nearly all (**98%**) of the passengers between the ages 0-3 rode in the rear seat and that most (**95%**) were restrained. Restraint use was much lower (**50%**) among the few (**2%**) observed in the front seat. Children ages 4-5 were still riding in the rear seat, by and large (**91%**), but restraint use was lower (**79%**) compared to younger years. Usage in the front seat was even lower (**70%**) for this age group. Older children ages 6-12 were more evenly distributed in the front and rear compared to younger children. Restraint use measured higher for this age group when observed in the front compared to when riding in the rear (**89%** versus **75%**).

2018 SEATING POSITION AND RESTRAINT USE

	% in a REAR Seat % Restrained	% in the FRONT Seat % Restrained
Ages 0-3	98% (n=1,354) 95%	2% (n=28) 50%
Ages 4-5	91% (n=1,130) 79%	9% (n=115) 70%
Ages 6-12	54% (n=1,268) 75%	46% (n=1,068) 89%
Total*	3,752	1,211

*Table includes passengers whose age, seating position, and restraint use were all recorded (n=4,963). Restraint use, age, and positional observations marked 'unknown' were removed.

Characteristics of Drivers with Children

The survey found **drivers with children** were more often female (58%, n=2,559) than male (42%, n=1,863); rarely was the sex of the driver not determined (0.1%, n=6).

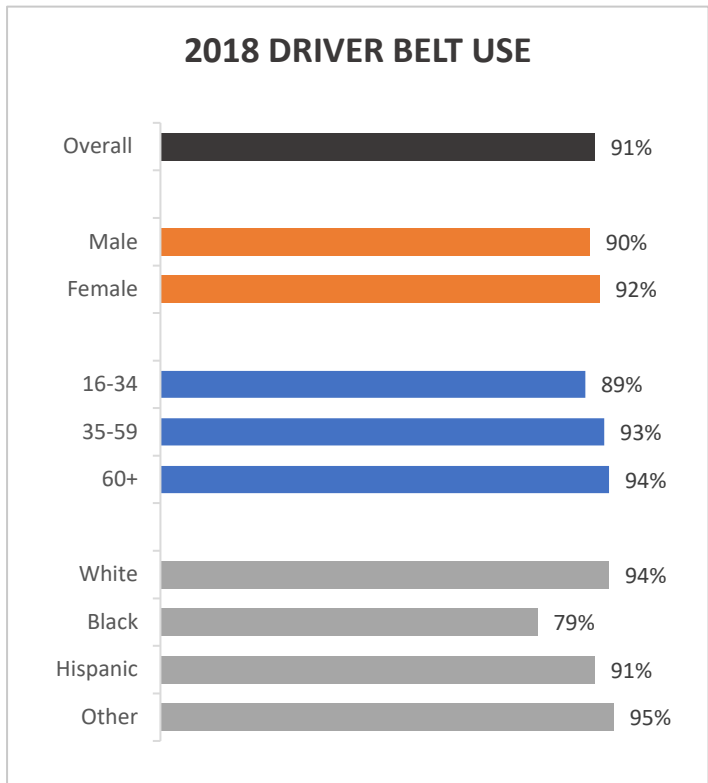

Children were most likely with drivers between the ages of 16-34 (48%, n=2,141) followed by drivers between the ages 35-59 (45%, n=1,991). Children least often appeared with drivers 60 years and older (7%, n=297). Rarely was the age of driver not determined (0.1%, n=5).

Race/ethnicity of drivers with children in the car closely matched U.S. Census data for the State of Florida. Sixty-one percent were coded as White (n=2,689); 17 percent Black (n=752); 18 percent Hispanic (n=800); and 4 percent Other (n=168). Again, rarely was driver race/ethnicity not determined (0.1% unknown, n=3).

Driver Belt Use

Drivers transporting children were belted 91 percent of the time (based on n=4,334 drivers whose safety belt usage was known). Driver characteristics were associated with varying belt usage. Female drivers whose restraint use was captured (n=2,510) were belted slightly more than male drivers (n=1,824), by two percentage points (92% versus 90%, respectively). Drivers between the ages 35-59 (n=1,960) and drivers 60 years and older (n=296) were belted more often than younger drivers (n=2,086) by at least four percentage points. The survey indicated a difference in belt use by Race/Ethnicity. White (n=2,658) drivers were belted 94 percent of the time. Hispanic (n=771) drivers were belted 91 percent of the time while Black drivers (n=724) were belted 79 percent of the time. Drivers with race coded “Other” (n=166) were belted 95 percent of the time.

How is Driver Belt Use Related to Child Restraint Use?

The survey found driver belt use is associated with child restraint usage. A child was far less likely to be restrained when a driver was not belted. The survey indicated children ages 4-5 were least likely restrained with an unbuckled driver (**only 16% using restraint**) followed by children ages 6-12 (**only 19% using restraint**). Even the youngest passengers (ages 0-3) were **unrestrained at an alarming rate of 45 percent**, when the driver was not belted.

2018 RESTRAINT USAGE BY AGE CATEGORY

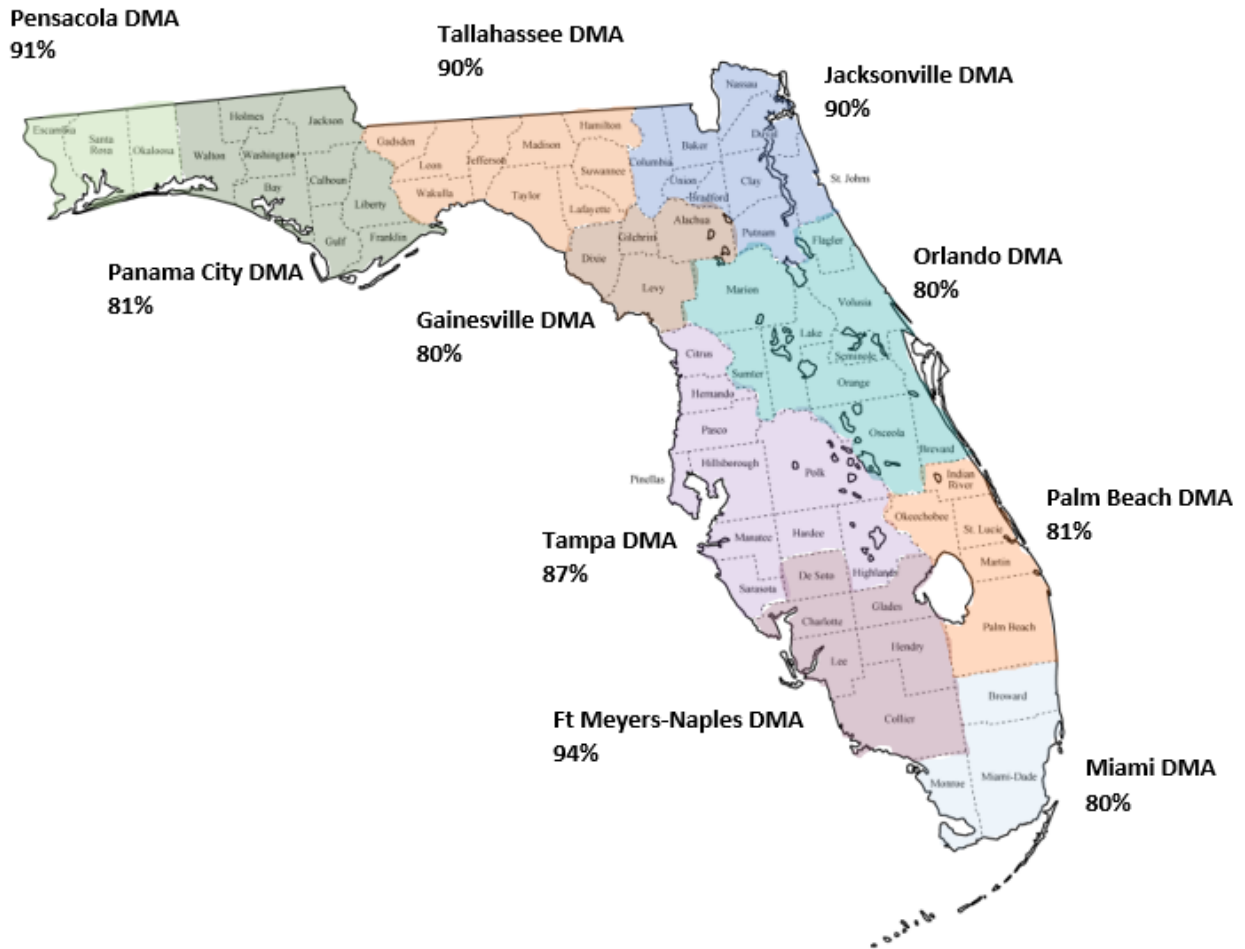

Restraint Use by Designated Market Area

Restraint use for children up to age 12 by Designated Market Area is displayed in the figures that follow. **Results presented by DMA and county should be viewed with some level of caution. Continued replication of the survey design will help to better understand restraint use across the DMAs.** Last year, PRG indicated relative extremes in the data resulting from small numbers of observations at the county and DMA level. PRG also suggested combining multiple years of data to provide more stability and confidence in the results. As expected, locations with lower and higher extremes in usage regressed to the mean. That suggests usage rates are not as widely varied by DMA as indicated in any single year’s survey results. Usage rates for combined years are represented in the gray bars below.
