### 1.0 Introduction

The Florida Traffic Safety Information System (TSIS) Strategic Plan serves as a guiding document for Florida's Traffic Records Coordinating Committee (TRCC). The plan covers a five-year period from 2017 through 2021. The purpose of the TSIS Strategic Plan is to provide a blueprint for measuring progress towards advancing the accessibility, accuracy, completeness, timeliness, and uniformity of Florida's traffic records systems and strengthening the TRCC program. It also provides Florida state agencies with a common basis for moving ahead with traffic records systems upgrades, integration, and data analysis required to conduct highway safety analyses in the State. The plan sets forth the specific actions and projects that will be undertaken over the next five years to accomplish these goals.

#### 1.1 STRATEGIC PLANNING PROCESS

In 2015, the Florida Department of Transportation State Safety Office (FDOT) requested that the National Highway Traffic Safety Administration (NHTSA) facilitate a new Traffic Records Assessment (TRA), which was conducted from September 16, 2015 and concluded January 4, 2016. The recommendations from this assessment are included in Appendix A.

With the assessment results as an impetus, the Department decided to develop a new TSIS Strategic Plan for 2017 through 2021 to provide focus and direction to the high priority recommendations that came out of the assessment process. The strategic planning process spanned a three-month period beginning with several meetings held in Tallahassee, Florida in February 2017 and March 2017. These meetings focused on the six individual traffic record data systems including data usage and integration. On April 7, 2017, a voting meeting was held for Florida's Traffic Records Coordinating Committee (TRCC) Executive Board to approve the updated TSIS Strategic Plan. All of the meetings were broadcast via web-conference for interested individuals.

Participants in the strategic planning process included the TRCC Executive Board members and other interested representatives from TRCC member agencies. The following agencies were represented during the strategic planning process: the Florida Department of Transportation (FDOT), the Florida Department of Highway Safety and Motor Vehicles (FLHSMV), Florida Department of Health (FDOH), Agency for Health Care Administration (AHCA), Florida Highway Patrol (FHP), Florida Chief's Association (FCA), Florida Sheriff's Association (FSA), TraCS/ELVIS Florida, LexisNexis, Cambridge Systematics, Inc., University of Florida (UF), Florida Court Clerks and Comptrollers (FCCC), and NHTSA. Participants in the strategic planning process are listed in Appendix B.

The strategic planning process consisted of three phases, as shown in Figure 1.1. The activities that took place during each phase are discussed in more detail below.

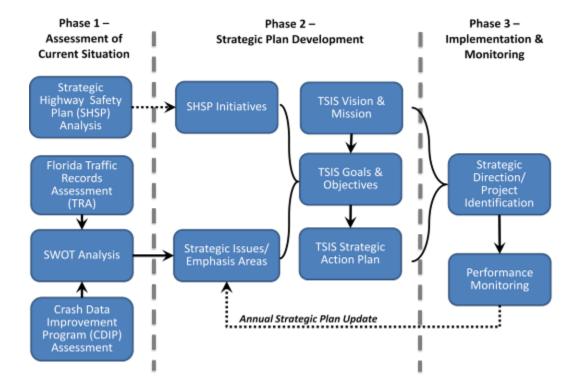

Figure 1.1 Strategic Planning Process

#### Phase 1 – Assessment of Current Situation

Phase 1 involved an assessment of the current situation for Florida's traffic records information systems. This is largely defined by the traffic records and data collection deficiencies identified in the 2016 Traffic Records Assessment.

Attendees participated in a SWOT analysis to identify strengths (S), weaknesses (W), opportunities (O), and threats (T) of Florida's traffic records information systems and the Traffic Records Coordinating Committee. The SWOT analysis provided a framework for matching Florida's strategy to the current situation. The results of the SWOT assessment were used to identify the following goals for the strategic plan: 1) Coordination; 2) Data Quality; 3) Integration; 4) Accessibility, and 5) Utilization.

#### Phase 2 - Strategic Plan Development

Phase 2 involved the development of the TSIS Strategic Plan, which consists of the vision, mission, goals, objectives, and strategies/action steps for improving the accessibility, accuracy, completeness, timeliness, integration, and uniformity of Florida's traffic records systems over the next five years.

Strategic planning participants conducted a visioning exercise and agreed the vision and mission should focus on the State's traffic records information systems, and not the TRCC as a group. The vision defines where Florida traffic records information systems will be in five years, while the mission is an overall statement of the desired result of Florida's planning efforts for traffic records systems. The TSIS vision and mission are detailed in Section 3.

Participants agreed the data quality objectives should focus on completeness, timeliness, accuracy, and uniformity, and owner agencies for each system determined whether the strategic plan would address each or a select few of the data quality attributes for their systems. Participants agreed objectives for integration should focus on the ability to link traffic records data through a common or unique identifier, rather than achieving data integration through a data warehouse or similar environment.

Goals, objectives, and strategies/action steps were developed for each of the emphasis areas: timeliness, accuracy, completeness, uniformity, integration and accessibility. The results are detailed in Section 3.

#### Phase 3 - Implementation and Monitoring

Phase 3 is ongoing and involves identification of potential projects and systems improvement programs designed to move the State's traffic safety information systems in the direction defined by the goals, objectives, and strategies/action steps. Potential projects were identified at the April TRCC Executive Board meeting. Selected projects detail their purpose/description, lead agency, resource requirements, likely timeline, benchmarks, and expected impact on achieving the goals.

For performance monitoring, each owner agency was provided NHTSA's Model Performance Measure for State Traffic Records Systems report to serve as a guide for identifying appropriate performance measures in meeting the TSIS Strategic Plan goals and objectives. Owner agencies will monitor progress on their established performance measures and use a worksheet to report progress on each measure. Performance measures are detailed in Section 3. An update on progress in implementing the 2017 – 2021 TSIS Strategic Plan will be prepared on an annual basis in conjunction with Florida's Section 405(c) grant application process.

#### 1.2 STRATEGIC PLAN ORGANIZATION

The TSIS Strategic Plan is organized is follows:

- Section 1 provided an introduction and overview of the strategic planning process.
- Section 2 describes the operations, governance, and membership of Florida's Traffic Records Coordinating Committee.
- Section 3 presents the TSIS Strategic Plan elements, which include the TSIS vision, mission, goals, objectives, and action steps.
- Section 4 provides a current report on accomplishments for the current fiscal year, and a description of how Florida's Section 405(c) grant funds will be used to address the goals and objectives of the TSIS Strategic Plan.
- Appendix A provides the 2016 Traffic Records Assessment Executive Summary.
- Appendix B lists the participants in the strategic planning process.

# 2.0 Florida Traffic Records Coordinating Committee

Florida's Traffic Records Coordinating Committee (TRCC) is a statewide stakeholder forum created to facilitate the planning, coordinating and implementation of projects to improve the State's traffic records information systems. This section summarizes the mission, purpose, governance, and membership of Florida's TRCC.

#### 2.1 TRCC Mission

Through the coordinated efforts of its member organizations, the TRCC will provide a forum for the creation, implementation, and management of a traffic safety information system that provides accessible, accurate, complete, consistent, integrated, and timely traffic safety data to the State of Florida. The TRCC Executive Board shall include policy level representatives of the following data systems: Crash Data, Roadway Inventory, Citation/Adjudication, EMS/Injury Control, Driver License/Driver History, and Vehicle Registration.

#### 2.2 TRCC PURPOSE

To ensure that accurate, complete, and timely traffic safety data is collected, analyzed, and made available to those agencies and individuals that need the information. Key functions of the TRCC include, but are not limited to:

- 1. Maintain authority to review Florida's highway safety data and traffic records systems
- 2. Provide a forum for discussion of highway safety data and traffic records issues and report on any issues to the agencies and the organizations in the State that create, maintain, and use highway safety data and traffic records
- 3. Consider and coordinate the views of organizations in the State that are involved in the administration, collection, and use of the highway safety data and traffic records system
- 4. Represent the interests of the agencies and organizations within the traffic records system to outside organizations
- 5. Review and evaluate new technologies to keep the State's highway safety data and traffic records systems up to date

- 6. Assist TRCC members applying for public and private funds to support and improve traffic records
- 7. Approve Florida's annual Section 405(c) application submitted by the Florida Department of Transportation (FDOT) to the National Highway Traffic Safety Administration (NHTSA)
- 8. Approve expenditures of Section 405(c) funds received by the FDOT
- 9. Review and approve the Florida Traffic Safety Information System Strategic Plan and any updates to the plan annually if tasks or objectives must be modified based on project progress

#### 2.3 GOVERNANCE OF THE TRCC

The TRCC Executive Board will elect the chair and vice chair of the TRCC from among its membership. The vice chair will serve as chair in his/her absence. The TRCC Executive Board meets, as needed, to discuss issues affecting Florida's Traffic Safety Information System. The TRCC Charter dictates that the TRCC Executive Board will meet at least once annually, however the Board normally meets at least once each quarter to conduct TRCC business. A majority vote of the members present at a meeting of the Executive Board is required to conduct TRCC business. At least four members of the Executive Board must be present to conduct business.

#### 2.4 MEMBERSHIP ON THE TRCC

The TRCC consists of an Executive Board, an Application Review Subcommittee and a Data (Go Team) Subcommittee.

#### **TRCC Executive Board**

The membership of the TRCC Executive Board includes representatives from agencies either responsible for managing at least one of the six information systems of the Traffic Safety Information System or with a vital interest in one or more of those systems. These agencies include the Florida Department of Transportation, Florida Department of Health, Florida Department of Highway Safety and Motor Vehicles, the State Court System, Florida Highway Patrol, Florida Sheriff's Association, Florida Chief's Association. Members of the Executive Board are appointed by the heads of their respective agencies. The FDOT State Safety Office provides staff support for the TRCC Executive Board. The Executive Board can vote to extend membership on the Executive Board to other Florida entities, public or private, that are part of the traffic safety information system. Representatives from all Florida entities which are part of the traffic safety information system can participate on the TRCC, but only Executive Board members can vote on TRCC business. Executive Board members who are unable to attend a meeting may provide their written proxy for voting purposes.

Table 2.1 Florida TRCC Executive Board Members

Name	Agency	Traffic Records System Represented
Beth Allman (Chair)	Florida Court Clerks & Comptrollers	Driver License / History Data Citation
		Law Enforcement / Citation Adjudication Data
Steve McCoy (Vice Chair)	Department of Health	EMS / Injury Surveillance
Chief Virgil Sandlin	Florida Chief's Association	N/A
Robert Kynoch	Florida Department of	Crash Data System
	Highway Safety and Motor Vehicles (FLHSMV)	Driver Licensing System
	,	Vehicle Registration System
Lora Hollingsworth	Florida Department of	Roadway System
Major Gary Howze	Florida Highway Patrol /	N/A
David Brand	Florida Sheriff's Association	N/A

Table 2.1 lists current TRCC Executive Board Members (as of April 2019).

#### **TRCC Subcommittees**

The Executive Board can create subcommittees to perform work for the board. Membership on these committees can include representatives from any Florida entity that contributes to or makes use of the traffic safety information system. The TRCC Coordinator serves as subcommittee chair and manages reporting responsibilities. Subcommittees can meet as often as needed to perform the work assigned by the Executive Board. The TRCC Coordinator shall report committee activities and accomplishments to the Executive Board at least quarterly.

Currently, there is an Application Review Subcommittee that was updated in January 2019. The responsibility of this committee is to review all concept papers/applications received for Section 405(c) and 402 funds and provide guidance to the Executive Board on potential projects. All proposed projects are prioritized and ranked based on project costs, risk of failure, stakeholder coordination and most importantly the impact on the core systems.

Needs to support the NHTSA Go Team and TRCC Coordinator arose and a Go Team Subcommittee was established on August 17, 2018. This subcommittee consists of subject matter experts from various stakeholders who represent and hold responsibility and represent each traffic records system. Due to the use and management of traffic records data in their everyday duties this Go Team Subcommittee is also known as the TRCC's Data Subcommittee.

**Table 2.2** TRCC Subcommittee Members

Name	Agency	Application Review	Data Subcommittee
Brenda Clotfelter	Florida Department of Health	Х	х
Joshua Sturms	Florida Department of Health	х	х

Melissa Gonzalez (TRCC Coordinator/ Subcommittee Chair)	Florida Department of Transportation	Х	х

Table 2.2 lists the members of the TRCC Subcommittee Members.

## 3.0 Traffic Records Strategic Plan Elements

#### 3.1 TSIS VISION AND MISSION

The following vision and mission statements were developed for Florida's Traffic Records Information System:

Vision: Users have access to quality traffic records data when, where and in the form needed.

Mission: Maximize the efficiency and effectiveness of traffic records data resources, collection, analysis and reporting.

## 3.2 TSIS GOALS, OBJECTIVES, AND STRATEGIC ACTION PLAN

The following goals were identified for Florida's traffic safety information system based on assessment recommendations and stakeholder input during the strategic planning process:

- Goal 1: Coordination. Provide ongoing coordination in support of multiagency initiatives and projects which improve traffic records information systems.
- Goal 2: Data Quality. Develop and maintain complete, accurate, uniform, and timely traffic records data.
- Goal 3: Integration. Provide the ability to link traffic records data.
- Goal 4: Accessibility. Facilitate access to traffic records data.
- **Goal 5: Utilization.** Promote the use of traffic records data.

Appendix C summarizes specific objectives, strategies, and action steps associated with these goals in order to advance traffic records systems in Florida over the next five years.

# 4.0 Annual Implementation Update

## 4.1 STATUS REPORT - TRAFFIC RECORDS PROJECTS from FY20

Table 4.1 provides the status of recent traffic records projects.

Table 4.1 Status Report - Traffic Record Projects from FY20

Project Name	Project Lead	Section 405(c) Funding	Purpose	Description	Progress
Traffic and Criminal Software (TraCS) Support, Enhancement, and Training	FSU	\$886,000	Improve the timeliness, completeness, accuracy, uniformity, accessibility, and integration of the Crash, Citation/Adjudication, Driver, Vehicle, and Roadway data systems.	The Florida State University (FSU) College of Engineering will maintain and upgrade the TraCS National Model software and provide training and support to law enforcement agencies. Programmers will update software to support the completion of both electronic crash and citation forms approved by the FLHSMV. Resources will be allocated to a full-time Systems Architect, two Developers, Systems Administrator, an IT Support Specialist; and the following part-time positions: Principal Investigator, Business Office Clerical and Other Personnel Staff Technicians. Funds will also be used to maintain a centralized hosting facility, a secondary disaster recovery site, travel to conduct trainings and setting up new agencies, and expenses for maintenance and support.	TraCS reports average about 6.4 days from the date of the crash to the statewide repository at a 99.99% error free rate. <u>Usage:</u> 58,993 crash reports quarter one and 57,480 in quarter two; 31% of statewide crashes submitted through TraCS 19,578 Users - 179 Total Agencies Integration: Crash Geo-Location - 65% of total crash reporting submittals across 167 agencies Citation Geo-location: -12% of total citation reporting across 115 agencies ELVIS - 71% of users <u>Citations</u> - 119 Agencies

Project Name	Project Lead	Section 405(c) Funding	Purpose	Description	Progress
Field Data Collection for National EMS Information System (NEMSIS)	FDOH	\$439,955	Improve the timeliness, completeness, accuracy, uniformity, integration and accessibility of Florida's EMS patient care records in the EMS/ Injury Surveillance System, Crash, Roadway, and Vehicle data systems.	The Florida DOH will work on increasing the number of agencies submitting data to the State repository in compliance with the current NEMSIS standards. It will also work on transitioning agencies into compliance with the new NEMSIS Version 3 (V3) standards by September 2020. The implementation of the V3 data standards improves the compatibility and interoperability of data between state and local systems and the national data system by defining a new framework, model data elements, national database structure and state submission process. This project will fund a Project Manager, Technical Business Analyst and Data Modeler; along with data hosting services, required vendor change orders, and travel expenses to educate local EMS agencies on data collection standards and to attend conferences for implementation planning.	First submission of V3 to NEMSIS: 12/08/2016 Trainings EMSAC BioSpatial Training: 3/3/2020; 6/10/2020. EMSAC Data Committee: Jan. 2020; 3/3/2020; 6/10/2020. Usage: - 194 of 203 Agencies submitting to state repository - 91.9% transitioned to NEMSIS V3 - 97% of EMS runs reports submitted to state repository Integration Completed: Biospatial- Crash Records & Trauma Data; ESSENSE; ODMAP- 1/22/2020

Project Name	Project Lead	Section 405(c) Funding	Purpose	Description	Progress
Expanding Accessibility Utilization, and Data Integration of Signal Four Analytics (S4 Analytics)	UF	\$377,418	Improve the Accessibility, Accuracy, Completeness, Integration, Timeliness, Uniformity of the Crash, Roadway, and Citation/Adjudic ation data systems.	This project with the UF's S4 Analytics is a statewide crash and citations analytical system that allows local, regional and state agencies to analyze and create maps and statistical reports of crashes and citations in a consistent, uniform and timely fashion. This project with the University of Florida will address several S4 Analytics feature requests and overall system improvements. It will expand the integration of citations with crashes statewide, expand the new reporting module that provides interactive summary charts of crashes and citations, perform data quality analysis and database updates, perform system monitoring, migrate the system to a new web platform, and promote the use of S4 Analytics through numerous avenues such as training webinars and demonstrations at national and state conferences. Grant funding will be provided for personnel to conduct these improvements, travel and equipment expenses.	S4 Database integrates crash reports, citation reports and roadway data  - 4,268 users  - 850 agencies and vendors  - 51,432 user login sessions  - 170,974 crash queries generated  - 683,504 crash reports retrieved  - 1,607 citation queries generated  - 6,873,552 total crash records in S4  - 32,887,489 total citation records in S4

Project Name	Project Lead	Section 405(c) Funding	Purpose	Description	Progress
Crash and UTC Data Improvement	FLHSMV	\$124,594	Improve the Accuracy, Completeness, Timeliness, and Uniformity of the Crash and Citation/Adjudi cation data system	The Crash and UTC staff at the Florida FLHSMV will be tasked with improving Florida crash and UTC data to allow the FLHSMV and stakeholders to make more informed and accurate decisions and implement appropriate countermeasures. This project will apply a data driven approach to increase accuracy, completeness, timeliness, and uniformity of record reporting used in developing traffic safety initiatives and law enforcement countermeasures. The crash program staff will be issuing quarterly accuracy and completeness reports to include proposed remedies to all LEAs submitting crash reports and will coordinate four meetings with critical stakeholders to obtain an agreement on what to include in the revised crash report to ensure quality data is captured to meet all needs. The staff will also develop a crash report control document, based on the most recent MMUCC version, which will serve as a reference resource for the new crash report and the associated database changes. Additionally, the UTC program staff will continue its ongoing improvement efforts and conduct four train-the-trainer workshops with the Clerk of Courts (COC). They will also conduct a review of four case management systems utilized by the COC for UTC submission and disposition data to propose software data edits to the vendors.	Established formal performance measurements for Crash and UTC accuracy, completeness, and timeliness (scorecard/baseline) - UTC training curriculum established - Performance Report and Distribution List updated for LEAs - 4 COC UTC train-the-trainer workshops - 4 Stakeholder Meetings for Crash Revision Feedback - 4 COC case management systems under review  Trainings and meetings TBD due to COVID-19.  Crash Report Control Document is in progress and information is being compiled at this time.

Project Name	Project Lead	Section 405(c) Funding	Purpose	Description	Progress
Unified and Sustainable Solution to Improve Geo- Location Accuracy and Timeliness of Crashes and Citations	UF	\$168,567	Improve the Accessibility, Accuracy, Completeness, Integration, Timeliness, Uniformity of the Crash and Citation/Adjudication and EMS/Injury Surveillance data systems.	This project with the UF will address the error rate in location data that reduces the ability of crashes to be automatically geo-located. Geo-location currently requires human editors to manually map crashes at a significant, recurring cost to the State. The project will solve the geo-location problem by providing a unified geo-location and validation service, like Florida's validation process used for driver and vehicle information. To accomplish this, a web service was developed using the Florida unified base map. It has become apparent that citations suffer from the same problem in relation to accurate crash location data. The Geo-Location tool will continue efforts in partner with TraCS agencies to incorporate the tool on their e-citations and e-crash system. Another critical problem that results from errors in location data is the lack of timeliness. Timely availability of geolocated data will enable earlier detection of problems and identification of solutions, ultimately saving lives and preventing loss of property. Project funding will be provided for personnel to perform technical support and trainings, travel and equipment expenses.	TraCS currently incorporates this tool on their e-citations and e-crash reports.  Total of 167 TraCS agencies utilizing this tool for crash reporting and 115 agencies for citation reporting: 65% of total TraCS crash reporting submittals are geolocated 12% of total TraCS citation reporting submittals are geolocated Number of Geolocated Incidents: - 103,713 crash reports - 72,887 citation reports - 21,976 traffic warnings - 4,319 tow sheets - 1,212 DUI Citations - 568 Parking Citation - 329 Field Interview Report - 226 Offense Incident Report - 61 Boating Warning - 45 Boating Citation

Project Name	Project Lead	Section 402 Funding	Purpose	Description	Progress
Electronic License and Vehicle Information System (ELVIS)	FSU	\$518,833	Improve the Accessibility, Accuracy, Completeness, Timeliness, Uniformity of the Crash and Citation/Adjudi cation, Driver, Vehicle data systems	The FSU will maintain and upgrade an import data tool to provide access to the Florida National Crime Information Center (FCIC) and National Crime Information Center (NCIC) data that will be provided without charge to local law enforcement agencies. This web-based tool will improve the accuracy and quality of crash data submitted by these agencies, while reducing the redundancy and labor costs associated with manual entry. Many agencies currently pay separate licensing costs to query FCIC/NCIC data from providers whose software does not easily partner with the TraCS. The proposed ELVIS will provide all Florida law enforcement agencies the ability to run queries and to import contact information into TraCS forms. Resources will be allocated to a full-time Systems Architect, Application Developer, IT Support Specialist, and a part-time Principal Investigator and Technician.	Web-Based (no installation required): FCIC/NCIC data Average year-to-date availability: 99.87% - 197 agencies - 19,092 users  45 types of queries performed: - 3,710,596 total queries ran Total number of driver and vehicle records exported: 4,668,392 Secondary Disaster Recovery Site in progress.
Traffic Records Coordinating Committee Support	TCC	\$27,500	Support for the TRCC and FDOT Safety Office.	Tallahassee Community College will contract with a consultant to provide technical advice and support to the TRCC Executive Board and its committees. The technical advisor will update Florida's TRCC Action Plan status as well as host and maintain the Florida TRCC Website.	Meeting facilitation and minutes provided for Dec. 2019 TRCC meeting. Facilitated April 2020 TRCC Meeting. Action Plan updates in progress.

Project Name	Project Lead	Section 402 Funding	Purpose	Description	Progress
Geolocation-Based Crash Diagramming and FDOT Crash Mapping to Improve Crash Location Timeliness and Quality - Phase I	UF	\$410,000	Improve the Accessibility, Accuracy, Completenes s, Integration, Timeliness, Uniformity of the Crash and Citation/Adjudication ad EMS/Injury Surveillance data systems.	The Florida Department of Transportation's (FDOT) current crash location system has several limitations that is preventing FDOT staff to map crashes in a timely fashion. This system is out of date, slow, requires extensive training, and can only handle onsystem crashes, i.e. crashes only on statemaintained roads. FDOT uses a second system to locate off-road system crashes which operates differently from the onsystem and as such requires different training and different data management practices. Due to these challenges and the sheer amount of crashes in the state (over 700,000 annually) FDOT experiences delays in providing timely geolocated crashes to Florida traffic improvement stakeholders. Of those 700,000 crash reports submitted by law enforcement agencies (LEAs), 300,000 crash reports include a crash diagram based on Florida's crash data requirements and federal recommendations provided in the Model Minimum Uniform Crash Criteria Guidelines. This crash diagram is also necessary for the FDOT staff to accurately locate crashes. At this time, many Florida LEAs do not have a diagramming tool and could use a geolocation tool which would eliminate the discrepancies between the crash address information and the depiction of the same location on the crash diagram. Funded under the Traffic Records Coordinating Committee, Signal Four (S4) Analytics provides the automated geolocation of crashes in a timely fashion but only for a portion of the crashes. The rest of the crashes are approximately located and not verified by a person. This creates challenges regarding the reliability of data analysis due to the discrepancy between FDOT and S4's location processes. This project with the University of Florida will reduce these three systems to a single unified geolocation system for the State of Florida, by enhancing the S4 Geolocation tool to provide a verified crash location not only for FDOT analysts but Florida's traffic improvement stakeholders. This project will also develop a web-based diagram tool to work in compat	

Florida Traffic Safety Information System Strategic Plan

Project Name Project Lead Section 402 Purpose				Florida Traffic Safety Information System S			
Project Name	Project Lead	Funding	Purpose	Description	Progress		
Central Crash Data Repository and Improved Crash Data Quality – Phase I	UF	\$200,000	Improve the Accessibility, Accuracy, Completeness, Integration, Timeliness, Uniformity of the Crash and Citation/Adjudic ation ad EMS/Injury Surveillance data systems.	The Florida Department of Highway Safety and Motor Vehicles' (FLHSMV) crash database annually receives approximately 750,000 crash reports. As the statutory custodian of Florida's crash data, FLHSMV distributes daily copies of statewide crash data and images to two statewide recipients- the Florida Department of Transportation and University of Florida's (UF) Signal Four Analytics (S4) creating three copies of the same information.  Considering a 10-year period, the 6 million records of crash data distributed at least 3 times accumulates to about 18 million records duplicated across various databases. Also, approximately 300,000 of the total crash reports submitted require law enforcement agencies (LEAs) to submit crash diagrams. To reduce the time for an officer to prepare these diagrams, LEAs have been using aerial photography through S4 as a reference layer which increases the accuracy of information. However, the current FLHSMV ingestion process is unable to support these high-resolution aerial photographs causing a reduction in resolution of the photo and sometimes causing the diagram to be unreadable. This project with the University of Florida will develop a web service to serve the crash report images to authorized recipients, within necessary privileges and security constraints, from one single location hosted at FLHSMV, thus eliminating the need to distribute multiple copies. In coordination with FLHSMV, the UF team will review the current ingestion process to implement revisions needed to support crash diagrams with their original photo resolution. This will contribute to data quality improvement at present and prepare the necessary requirements to support the web-based diagramming tool planned to be developed this year.	This project was awarded late March 2020 and is currently in the process of obtaining personnel to begin developments.		

#### 4.2 ACHIEVEMENT OF MEASURABLE PROGRESS

The provisions of the Section 405(c) grant application require applicant States to demonstrate year-to-year traffic records improvement in at least one of the six core systems in at least one of the six performance areas (to include Other if specified):

- Timeliness,
- Accuracy,
- Completeness,
- Uniformity,
- Integration, and
- Accessibility

For FY21, the Florida TRCC submitted two performance measures which demonstrate significant, system-wide performance; improvements were to the Crash System and the EMS/Injury Surveillance System. The performance measures, and a description of each, are provided below:

- 1. Accurately located electronic crash reporting (i.e., the average percentage of accurately located electronic crash reports submitted into Florida Department of Highway Safety and Motor Vehicles (FLHSMV) Crash Master Database by law enforcement agencies utilizing the Geo-Location tool) Crash/Accuracy
- 2. Uniformity of EMS/Injury data (i.e., the percentage of Florida's Public or private entities involved in EMS systems which have been licensed by the State of Florida, who are submitting NEMSIS Version 3 compliant run reports to the FDOH EMS Tracking and Reporting System, EMSTARS) EMS/Injury / Uniformity

Performance Measure #1: Accuracy of Electronic Crash Reporting Processing into the DHSMV Crash Master Database

#### Performance Measure Description

This performance measure evaluates the **increase of accurately located electronic crash report data** – as demonstrated through the submission of electronic crash reports into the Florida FLHSMV Crash Master Database via law enforcement agencies utilizing the Signal Four (S4) Geo-Location tool.

#### Measurement Technique

The following measurement was analyzed for this performance measure:

• The average percentage of accurately located electronic crash reports submitted into the Florida FLHSMV Crash Master Database by law enforcement agencies using the Geo-Location tool.

To normalize the accurately located electronic crash data, the average percent of electronic crash reports submitted into the Florida FLHSMV Crash Master Database by law enforcement agencies using the S4 Geo-Location tool were compared for the same period of time (April to March) for consecutive years.

#### Baseline and Current Values

The achieved improvement is an increase in accurately located electronic crash reports utilizing the Geo-Location tool – as demonstrated through an increase in the average percentage of accurately located electronic crash reports submitted into the Florida FLHSMV Crash Master database by law enforcement agencies utilizing the S4 Geo-Location tool.

Baseline and current values are summarized in Table 4.2. During the baseline period from April 1, 2018 to March 31, 2019, a total of 699,883 electronic crash reports were submitted into the database of which 105,506 crash reports were accurately located using the Geo-Location tool. The average percent of accurately located electronic crash reports was 15.07%. During the current period from April 1, 2019 to March 31, 2020, a total of 725,543 electronic crash reports were submitted into the database of which 167,922 crash reports were accurately located using the Geo-Location tool. The average percent of accurately located electronic crash reports was 23.14%. The percentage of accurately located electronic crash reports entered into the database increased 8.07% (from 15.07% to 23.14%) when compared to the previous year.

An increase of accurately located electronic crash reports is expected next fiscal year due to the mandate of this tool in FY20 for all law enforcement agencies submitting crash reports with the Traffic and Criminal Software (TraCS).

Table 4.2 Results for Accuracy of Electronic Crash Reporting

Time Period	Performance Results			
April 1, 2018 – March 31, 2019 (Baseline)	A total of <b>699,883</b> crash reports were submitted electronically into the Crash Master Database at a <b>15.07</b> % average percentage of <b>accurately Geo-Located crash reports</b>			
April 1, 2019 – March 31, 2020 (Current Value)	A total of <b>725,543</b> crash reports were submitted electronically into the Crash Master Database at a <b>23.14</b> % average percentage of <b>accurately Geo-Located crash reports</b>			

### Performance Measure #2: Uniformity of EMS data submission into the EMSTARS Database

#### Performance Measure Description

This performance measure evaluates the **uniformity of EMS data submission** – as demonstrated through an increase in the percentage of Florida's public or private entities involved in EMS systems which have been licensed by the State of Florida, who are submitting National EMS Information System (NEMSIS) Version 3 (V3) compliant run reports to the Florida Department of Heath via the Bureau of EMS, Prehospital EMS Tracking and Reporting System (EMSTARS).

Public or private entities involved in emergency medical services systems are minimally required to provide patient care summary level data to the Florida Department of Health, Bureau of EMS, Prehospital Aggregate System per Florida Administrative Code 64J-1.014. This administrative code defines two options for the submission of patient care data. One being the submittal of summary level data to the Prehospital Aggregate System and the second option being the submission of runs reports via EMSTARS.

The patient care data submitted via the Prehospital Aggregate System is only summary information which does not include EMS runs report record level data. Also, the EMS response and patient care summary data does not include information on Incident Date. The runs reports submitted through EMSTARS is Florida's only database that is collecting and transmitting the incident level data required for NEMSIS compliance. EMSTARS does not accept EMS agency records that are not NEMSIS compliant. EMSTARS reporting requirements far exceed the aggregate summary requirements; therefore, submission of runs data to EMSTARS is voluntary

Currently, Florida has a total of 286 licensed EMS agencies of which 211 are EMSTARS participating agencies. Of the 211 EMSTARS participating agencies, 194 agencies are submitting run reports by V3 data standards.

#### Measurement Technique

The following measurement was analyzed for this performance measure:

The percentage of Florida's public or private entities who are submitting NEMSIS V3 compliant run reports to EMSTARS.

To normalize the uniformity of V3 compliant run reports data submitted, the percent of participating licensed EMS agencies who are submitting NEMSIS V3 compliant run reports via EMSTARS were compared for the same period of time (April to March) for consecutive years.

#### Baseline and Current Values

The achieved improvement is an increase in the uniformity of EMS run reports as demonstrated through an increase in percent of licensed EMS agencies who are submitting NEMSIS V3 compliant run reports via EMSTARS. For the baseline period, the number of licensed EMS agencies in Florida was 285, of which 203

were EMSTARS participating agencies. Of the 203 EMSTARS participating agencies, 134 were submitting run reports by NEMSIS V3 data standards. For the current period, the number of licensed EMS agencies in Florida was 286, of which 211 were EMSTARS participating agencies. Of the 211 EMSTARS participating agencies, 194 were submitting run reports by NEMSIS V3 data standards.

The number of licensed agencies fluctuates due to agency mergers, closures and/or new agencies licensed. Florida remains in compliance with the NEMSIS V3 standards to provide a uniform data collection across all licensed agencies.

Baseline and current values are summarized in Table 4.3. For the baseline period from April 1, 2018 to March 31, 2019, 134 of the 203 (66%) licensed EMS participating agencies were actively reporting by NEMSIS V3 standards to EMSTARS. For the current period from April 1, 2019 to March 31, 2020, 194 of 211 (91.9%) licensed EMS participating agencies were actively reporting by NEMSIS V3 standards to EMSTARS. The percent of licensed EMS agencies who are submitting NEMSIS V3 compliant run reports via EMSTARS increased by 25.9% (from 66% to 91.9%) when compared to the previous year.

Table 4.3 Results for Uniformity of EMS Data

Time Period	Performance Results			
April 1, 2018 – March 31, 2019 (Baseline)	<b>134 of 203 (66%)</b> licensed EMS participating agencies were actively reporting run reports by NEMSIS V3 standards to EMSTARS			
April 1, 2019 – March 31, 2020 (Current Value)	<b>194 of 211 (91.9%)</b> licensed EMS participating agencies were actively reporting run reports by NEMSIS V3 standards to EMSTARS			

Florida submitted an interim report of progress to NHTSA Region 4 Team on April 8, 2020 and received notice on April 30, 2020 that Florida has demonstrated measurable progress toward achieving the goals and objectives identified in the strategic plan. The NHTSA 405 Traffic Records Review Team will make the final determination with the submittal of the Section 405(c) State Application.

#### 4.3 PLANS FOR FY21 GRANT FUNDING

#### **Grant Proposal Process**

For FY21, the State of Florida sought grant proposals for potential projects to advance the goals and objectives of the 2017-2021 TSIS Strategic Action Plan. A draft version of the Action Step Matrix detailing the goals, objectives, and strategies of the Strategic Plan was made available to applicants. Proposals for FY21 Section 405(c) and 402 funding were accepted from January 1 – February 29, 2020.

Ten funding requests were submitted during that time period totaling

\$3,500,772. Two requests were submitted by the University of Florida (UF) under Section 402 to continue efforts on current FY20 projects that were awarded mid-grant cycle. A new project request submitted by the Florida Department of Highway Safety and Motor Vehicles was received to improve data quality attributes for the driver datasets. Six requests were related to existing statewide TRCC projects and one was to continue to provide support needed for the TRCC.

#### **Project Prioritization Process**

At the April 3, 2020 meeting, the TRCC Executive Board was advised the state projected an estimated \$2,300,000 in Section 405(c) and an estimated \$2,000,000 in Section 402 funds to be available October 1, 2020. The TRCC Coordinator provided a summary of the Application Subcommittee's recommendations from their March 13, 2020 meeting, after which Executive Board Members asked questions about the proposals.

The Subcommittee recommended to fully fund all 10 project requests. Six statewide projects for a total of \$2,184,685 in Section 405(c) funds and the other 4 statewide projects for a total of \$1,316,087 in Section 402.

The Executive Board voted and approved the 10 statewide projects to be fully funded as the Subcommittee recommended. Ultimately a total amount of \$3,500,772 was approved, with final amounts pending the total Section 405(c) and 402 grant funding approved by the NHTSA.

#### Traffic Records Projects to be Funded in FY21

See Highway Safety Plan FY21 for approved traffic records project summaries and funding amounts under Section 405(c) and 402.

# A. 2016 Traffic Records Assessment Summary

#### **BACKGROUND**

In 2012, the National Highway Traffic Safety Administration published an updated Traffic Records Program Assessment Advisory (Report No. DOT HS 811 644). This Advisory was drafted by a group of traffic safety experts from a variety of backgrounds and affiliations, including: State highway safety offices, the Governors Highway Safety Association (GHSA) and the Association of Transportation Safety Information Professionals (ATSIP), as well as staff from NHTSA, FMCSA, and FHWA. The Advisory provides information on the contents, capabilities, and data quality of effective traffic records systems by describing an ideal that supports quality data driven decisions and improves highway safety. In addition, the Advisory describes in detail the importance of quality data in the identification of crash causes and outcomes, the development of effective interventions, implementation of countermeasures that prevent crashes and improve crash outcomes, updating traffic safety programs, systems, and policies, and evaluating progress in reducing crash frequency and severity.

The Advisory is based upon a uniform set of questions derived from the ideal model traffic records data system. This model and suite of questions is designed to be used by independent subject matter experts in their assessment of the systems and processes that govern the collection, management, and analysis of traffic records data in a given State.

#### **EXECUTIVE SUMMARY**

Out of 391 assessment questions, Florida met the Advisory ideal for 219 questions (56%), partially met the Advisory ideal for 53 questions (13.6%), and did not meet the Advisory ideal for 119 questions (30.4%).

As Figure 1 illustrates, within each assessment module, Florida met the criteria outlined in the Traffic Records Program Assessment Advisory 52.6% of the time for Traffic Records Coordinating Committee Management, 56.3% of the time for Strategic Planning, 54.5% of the time for Crash, 51.3% of the time for Vehicle, 57.8% of the time for Driver, 36.8% of the time for Roadway, 75.9% of the time for Citation / Adjudication, 56.1% of the time for EMS / Injury Surveillance, and 46.2% of the time for Data Use and Integration.

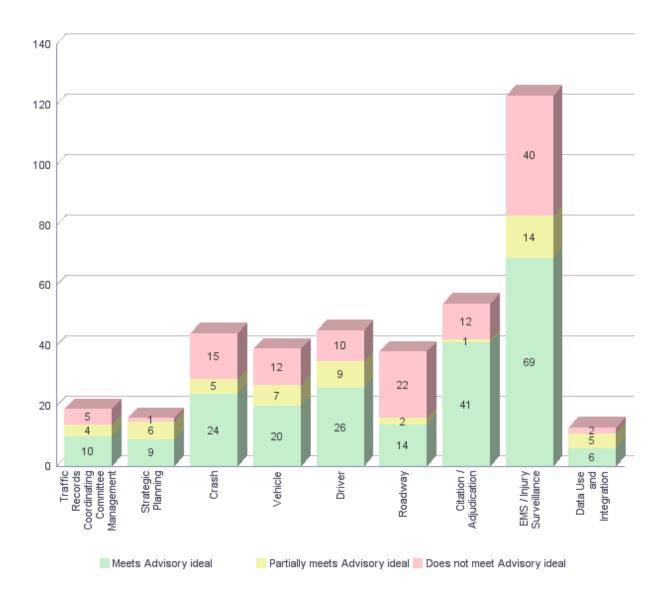

Figure 2: Assessment Section Ratings

	Crash	Vehicle	Driver	Roadway	Citation / Adjudication	EMS / Injury Surveillance
Description and Contents	100.0	61.1%	80.0%	66.7%	100.0	70.6%
Applicable Guidelines	100.0	100.0	100.0	33.3%	78.9%	93.0%
Data Dictionaries	86.7%	90.5%	83.3%	33.3%	100.0	93.3%
Procedures / Process Flow	89.6%	71.2%	96.1%	79.2%	95.1%	86.9%
Interfaces	53.3%	81.8%	90.5%	50.0%	76.2%	33.3%
Data Quality Control Programs	53.6%	67.5%	53.8%	68.2%	71.8%	68.5%
Overall	74.8%	74.8%	78.7%	62.7%	87.3%	75.1%

_	Overall
Traffic Records Coordinating Committee Management	77.3%
Strategic Planning for the Traffic Records System	84.9%
Data Use and Integration	73.7%

#### Recommendations

Figure 2 shows the aggregate ratings by data system and assessment module. Each question's score is derived by multiplying its rank and rating (very important = 3, somewhat important = 2, and less important = 1; meets = 3, partially meets = 2, and does not meet = 1). The sum total for each module section is calculated based upon the individual question scores. Then, the percentage is calculated for each module section as follows:

$$Section \, average \, (\%) \, = \frac{Section \, sum \, total}{Section \, total \, possible}$$

The cells highlighted in red indicate the module sub-sections that scored below that data system's weighted average. The following priority recommendations are based on improving those module subsections with scores below the overall system score. According to 23 CFR Part 1200, §1200.22, applicants for State traffic safety information system improvements grants are required to maintain a State traffic records strategic plan that—

"(3) Includes a list of all recommendations from its most recent highway safety data and traffic records system assessment; (4) Identifies which such recommendations the State intends to implement and the performance measures to be used to demonstrate quantifiable and measurable progress; and (5) For recommendations that the State does not intend to implement, provides an explanation."

Florida can address the recommendations below by implementing changes to improve

the ratings for the questions in those section modules with lower than average scores. Florida can also apply for a NHTSA Traffic Records GO Team, for targeted technical assistance.

#### **MAJOR RECOMMENDATIONS**

#### TRCC Management

#### Summary

Florida is generally well served by an active and fully supported Traffic Records Coordinating Committee (TRCC) with buy-in, oversight, and regular participation by executives at the highest levels of traffic records management and who have the power to direct the agencies' resources for their respective areas of responsibility. The Florida TRCC Charter clearly establishes an Executive Board that meets at least three times a year and the State is to be commended on establishing this core group of experts, managers, and policy-makers that have made traffic records data systems a priority in Florida highway safety.

Florida has representation at the Executive level and one subcommittee focused on grant-funded (405c) projects review and recommendation. The Executive Council comprises eight members and the Application Review Committee comprises four members, one of whom is also on the Executive Board. The Application Review Committee's function is to review, comment, and make recommendations to the Executive Board on applications to receive funding for traffic records systems projects. Based on recommendations from the subcommittee, the Executive Board votes to approve, amend, or deny funding for proposed projects.

There are only eleven current and active TRCC members, which is an indication that Florida has an opportunity to grow its TRCC to include more technical level expertise, either by creating a named TRCC technical 'board' or committee, or through the creation of another subcommittee focused on some technical aspect of traffic records in the State. The Executive Board can establish technical subcommittees per the Charter and there was a technical level subcommittee established in 2012, though since disbanded, which could be reconstituted to create corresponding technical membership to match and support the executive membership.

Stakeholders are mentioned as having a place at the table in the TRCC, but the roster and minutes indicates minimal numbers of participants at each meeting.

Florida has a designated TRCC Coordinator that is responsible for the scheduling and facilitation of TRCC meetings and monitoring of TRCC goals and funded project progress. Florida also utilizes the services of a contractor to support the TRCC and the TRCC Coordinator. This support system is a critical component to the continual functionality of oversight of federal funding and strategic planning handled by the TRCC. Florida is to be commended for its commitment to a functional and active TRCC that demonstrates accountability and transparency in the management of federal funding and the traffic records program.

Florida has an opportunity after this assessment to write a new plan and to expand the membership of the TRCC. Given the breadth of technical projects funded through the 405c program, and the depth of investment in technologies to improve the records

systems, an opportunity to recruit members from Information Technology (IT) groups to serve on the TRCC and provide formal consultation in the evaluation and awarding of funding for software and hardware upgrades and maintenance should be considered. Continual monitoring of these projects to ensure a healthy return on investment can occur within the TRCC with greater input and participation of IT personnel throughout the year and the life of the strategic plan. The — Application Review Committee does a thorough and impressive review of projects to ensure they are in line with the strategic plan and are a sound investment of federal funds, and adding IT specialists to this subcommittee could provide an additional check and balance to ensure the projects comply with other IT initiatives planned around the State that could improve the efficacy of traffic records projects. Including appropriate IT agents would help ensure that technical projects approved by the TRCC will function within the technological framework and long-range planning of other systems in Florida, especially those that encompass or interface with the traffic records systems.

Florida has a TRCC Charter, recently revised and signed by the TRCC Chair and Governor's Representative for Highway Safety, establishing an Executive Board responsible for the State's Traffic Records Strategic Plan, a five-year plan based on recommendations from the most recent Traffic Records Assessment and the needs of the member agencies to improve their records systems. The TRCC is clearly involved in all levels of the strategic planning process, and great detail is provided on the strategies and projects the TRCC has prioritized in the five-year plan. The Florida Traffic Records Strategic Plan, and the Action Plan therein, consists of strategies to improve all the core systems in the traffic records program. Included for each strategy, and subsequent actions steps, are performance measures and the methods for calculating the measures. Each measure is evaluated annually and is included in a status report as part of the annual update to the strategic plan. There are performance measures for all the core systems, and a status update is included for each annually. Measures showing progress that qualifies the State for subsequent federal funding are also included in the annual plan update. The action plan is an easy-to-read and straightforward document that any inside or outside observer can reference to understand the state of traffic records projects in Florida and how the TRCC tracks progress to meet the objectives of the strategic plan.

The Executive Board of the TRCC is responsible solely for the approval and allocation of NHTSA 405c funds that are significant amounts of funds altogether. There is a formal process of review indicating the amounts of funds allocated for each project in the 405c program, and evidence is provided showing the deliberative process for the most recent year's federal funding allocations. At this time, the Florida TRCC is not casting a wide net in applying for and allocating additional federal funding to traffic records projects. Given the well-established and commendable process for allocating 405c funds, Florida is poised to also leverage additional funding to further support the strategic plan objectives and have greater success in investing in technologies to move the State forward. The State is encouraged to consider forming a subcommittee, or to designate a meeting or two each year, to review all possible available funds and serve to at least

indicate favorable or unfavorable guidance on the use of a wider range of funds to support the State's strategic plan and priority projects therein.

The TRCC is fully engaged in ensuring that the process for monitoring and allocating

federal funding is appropriate and efficient, and deliberate time is established to improve the function of the TRCC itself. Project directors are included in the meetings to provide brief updates, but there does not appear to be very many other participants in the meetings bringing issues to the table for discussion and problem-solving. While not all stakeholders are bringing a wide range of items to the TRCC, the meetings are focused intently on the projects and funding that have been given the highest priority for the year (and for the five years encompassing the current strategic plan). While more stakeholders should ideally be represented and participating (something that can and should occur in subcommittees and working groups), it is evident that the Executive Board is fully committed to the most critical functions of the TRCC. Reforming the technical committee or establishing another technical working group that would involve more stakeholders would enable meaningful coordination among stakeholders and serve as a forum for the discussion of Florida's traffic records programs, challenges, and investments. The involvement of a wider range of members would also help the TRCC Coordinator identify needs for more technical assistance and training within stakeholder agencies.

The Florida TRCC itself does not maintain an inventory of all traffic records systems; however, each individual agency maintains an inventory of their own systems. The State TRCC Chair and/or Coordinator could obtain the individual inventories or pursue obtaining data dictionaries from each of the core system owners to help identify gaps in systems or opportunities for compliance reviews with federal standards, such as MMUCC. The TRCC, as the central authority in the State for traffic records systems, should maintain documentation pertaining to each of the core systems. An inventory of all systems will help the TRCC identify which systems would qualify for future funding and benefit from projects aimed at integrating the systems. As Florida's systems are upgraded and transitioned more fully to electronic collection and maintenance, opportunities for improving the data systems through integration will abound and an inventory will be crucial to identifying areas of potential integration and help support the prioritization of system improvements.

The Florida TRCC is not directly involved in the monitoring of a quality control program and indicates only indirect involvement through the members of the Executive Board member agencies that have their own quality control programs. The Florida TRCC has developed performance measures for the objectives and strategies in its plan that covers most of the core traffic records systems but only indicates an annual update of the measures as it is required to do for the submission of the 405c requirements in the Highway Safety Plan. Quarterly monitoring of the measures would allow the State to establish benchmarks for each measure to determine if progress will be achieved by the time of the annual review. Devoting a portion of the agenda at each of its three meetings would allow the TRCC Executive Board to check in on progress, and also encourage greater participation on the TRCC by the agencies in charge of the systems being measured.

#### **Strategic Planning Recommendations**

#### Summary

The Florida Traffic Records Coordinating Council is the State's Traffic Records Coordinating Committee (TRCC), and it is responsible for the development and

maintenance of a strategic plan. The Florida Strategic Plan is a 5-year plan that is updated annually to include funded project's efforts to advance the strategic objectives. The current plan was developed by the TRCC at the conclusion of the prior NHTSA Traffic Records Assessment and a FHWA CDIP evaluation. The recommendations from those evaluations were the basis of an internal SWOT (Strengths, Weaknesses, Opportunities, and Threats) analysis of Florida's traffic records systems undertaken by the TRCC. The TRCC developed the vision and mission, goals and objectives (performance measures), and the strategies and action steps of the five-year plan.

In addition to the multi-year vision, the Action Plan component of the Strategic Plan indicates a timeline/deadline and responsible party for every objective and most of the strategies and action steps. The Strategic Plan addresses many of the performance measures for each of the core systems but does not specifically include a strategy for each of the six measures across all six systems. The TRCC has prioritized improvements to each of the systems that can be reasonably accomplished in five years.

The TRCC is charged with monitoring the Plan annually and approving funding. The TRCC employs the four-box analysis process in determining the priorities for projects seeking federal funds to meet the objectives in the Strategic Plan. Initial projects in the development of the current plan were identified through this process, and subsequent annual reviews use the same process along with a two-tiered system of subcommittee review of projects, recommendations to the Executive Board, and Executive Board approval.

The Plan includes detailed project allocations and descriptions of how each funded project is addressing traffic records systems deficiencies and strategic priorities. The Plan documents a formal, deliberative process being used by the TRCC to allocate NHTSA funding, as the TRCC provides oversight to the Traffic Safety Data Improvement funds. However the Strategic Plan provides little coordination with other federal funding sources for various traffic record systems from other non-NHTSA agencies, such as FHWA, HHS (Department of Health and Human Services), etc.

The TRCC is not involved directly with addressing any impediments to coordination with the traffic systems components, because those are handled directly by the responsible agency. The State indicates that it has no major issues with coordination or interfacing with federal data systems. However the TRCC Strategic Plan shows minimal consideration for additional, proactive interfaces between federal data systems. Also, the TRCC strategic planning considerations have been somewhat focused on those systems for which the TRCC provides funding for improvement. While the agencies responsible for interfacing with all federal systems are active participants on the TRCC, there have not been any requests from these agencies to make system improvements, nor have any

been identified. A consideration of future TRCC Strategic Plans could include a proactive, comprehensive survey of the state's traffic record systems, their interconnectivity, and opportunities for enhancing interfaces.

The State indicates that an evaluation of technological functionality and advances are included in the deliberation process for projects approved and monitored by the TRCC.

The TRCC technical committee reviews applications for funding and makes suggestions for funding based on the lifecycle of current equipment in addition to the quality (expected lifecycle) of new equipment.

Beyond the specific funded projects, the TRCC does not directly address technical assistance and training needs. There is not a process in the TRCC's Strategic Plan for holistically providing such assistance and training support. The specific agency responsible for the data system provides the required technical assistance and training needs.

The TRCC Strategic Plan acknowledges the needs of all stakeholders, however those needs are identified only through the word of mouth from advocates on the TRCC who bring up local needs and concerns.

Overall the Florida TRCC Strategic Plan is comprehensive was and developed by a robust TRCC based on outside assessments and internally identified needs. The Strategic Plan is a best-practice example of documenting the relationships of funded projects and their identified strategic goals.

The strategic goals are used as a basis for funding decisions, and progress is measured in comparison with those goals. The Strategic Plan focuses on data system needs that receive funding from the TRCC and are responsive to identified needs and deficiencies. Additionally, while the TRCC has a strong statewide focus and the data systems are statewide, feedback from locals and other user-level stakeholders would improve the perspective of the plan especially with respect to technical assistance and training. Overall the Florida TRCC Strategic Plan meets a majority of the advisory ideals.

#### **Crash Records Recommendations**

- Improve the interfaces with the Crash data system to reflect best practices identified in the Traffic Records Program Assessment Advisory.
- Improve the data quality control program for the Crash data system to reflect best practices identified in the Traffic Records Program Assessment Advisory.

#### Summary

The Florida Crash System is consolidated into a single database housed within the Florida Department of Highway Safety and Motor Vehicles. The data is then shared with the Florida Department of Transportation and with local law enforcement agencies and traffic safety professionals via the FIRES web portal. Data accessibility via the FIRES web portal allows local agencies quick and easy access to their crash data and provides data analytics and geospatial analysis capabilities to help facilitate making data-driven decisions and to prioritize law enforcement and engineering efforts.

Florida has made positive strides in recent years and currently stands at 82% electronic crash reporting statewide. Grant funding continues to be utilized to help increase the level of electronic reporting and to eliminate paper reporting. However, there does not appear to be a formal plan or timeline for 100% electronic crash reporting. It would be beneficial for the State to establish a timeline with agency-by-agency goals for adoption of electronic crash reporting. It would also be helpful to identify obstacles that may be hindering each respective agency's transition to full electronic reporting and could be used to help guide decision-makers at all levels.

Florida utilizes MMUCC, ANSI D-16, and D-20 as primary sources for defining its crash system. It has been several years since a review has been conducted comparing Florida's data elements and attributes to the MMUCC standards. A more current analysis of Florida's crash system against MMUCC standards may be beneficial to the State and help determine if further improvements or revisions to the crash report form are needed or desired. NHTSA recently released MMUCC Mapping Guidelines to help states with this process. This document can be found at http://www-nrd.nhtsa.dot.gov/Pubs/812184.pdf.

There is an opportunity to improve and expand the performance measures used by Florida's crash system by making use of NHTSA resources and the FHWA CDIP program. Performance measures should be designed to provide important actionable information to the data system managers. The "NHTSA Model Performance Measures for State Traffic Records Systems" document is a good resource for identifying and implementing measures for all the traffic records datasets. It can be found at http://www-nrd.nhtsa.dot.gov/Pubs/811441.pdf. There will also be opportunities to utilize NHTSA Go-Teams to help improve traffic records systems processes following the completion of the assessment. Strengthening performance measures and performance measure reporting is an important aspect of a successful crash system.

Because of the variety of different ways in which crash data and reports are submitted to the crash system, it would be extremely helpful to establish performance measures, to use audits, and to have a more robust quality control program, for improving completeness, timeliness, and accuracy. Crash reports can still be submitted on paper, through TraCS, and via a number of different 3rd party vendors. Improved performance measures and oversight in these areas will help ensure the completeness, timeliness, and accuracy of all crash data in the State's repository.

Population of data elements in the crash system from other traffic records systems such as Driver, Injury Surveillance, or Roadway can have great advantages. Discussion regarding opportunities for improvement or expansion of data linkages, interfaces, and integration amongst the state traffic records systems should begin with the TRCC where all core traffic records systems managers and stakeholders are represented. As traffic records systems data becomes more widely used, system interfaces and data integration will be crucial. Improved data linkage will assist in streamlining processes, improve data quality, reduce duplication of effort, and allow data to be more fully utilized to make roadways safer. Expansion of the Electronic License and Vehicle Information System (ELVIS) initiative is definitely a step in the right direction, and its promotion and use has potential to be of great benefit.

Overall, the Florida Crash System seems to be functioning well under its current structure, with continued increases in the percentage of electronic crash reporting and with flexible data accessibility options and data analytics for end users via the FIRES web portal.

Opportunities for crash system growth in the coming years include: establishing a formal plan and targeted timeline to achieve 100% electronic crash reporting prior to the next traffic records assessment, expanding system interfaces and data integration efforts to improve data quality across core component traffic records systems, and instituting a more formal performance measurement program with meaningful measures that can be actively monitored and reported regularly to stakeholders.

#### **Vehicle Recommendations**

- Improve the description and contents of the Vehicle data system to reflect best practices identified in the Traffic Records Program Assessment Advisory.
- Improve the procedures / process flows for the Vehicle data system to reflect best practices identified in the Traffic Records Program Assessment Advisory.
- Improve the data quality control program for the Vehicle data system to reflect best practices identified in the Traffic Records Program Assessment Advisory.

#### Summary

The Department of Highway Safety and Motor Vehicles (DHSMV) is the custodian of the Florida vehicle data system. The Florida Real-time Vehicle Information System (FRVIS) stores the records of registered vehicles that contain identification and ownership information, vehicle make, model, year of manufacture, body type, and adverse vehicle history (title brands).

Florida is a 'step 6 - blue' PRISM participating state and is an active NMVTIS participant. The State's vehicle data system, FRVIS, sends title information to NMVTIS during title transactions (real-time). When NMVTIS is unavailable during the title transactions or when title transactions are finalized, NMVTIS transactions are submitted in a nightly batch process. The State incorporates brand information on the vehicle record that are recommended by AAMVA. The vehicle data system has a documented definition for each data field, as evident in the provided data dictionary and the Motorist Services Data Dictionary Addendum.

The vehicle system flags and identifies vehicles reported as stolen to law enforcement authorities. The vehicle system is updated nightly in a batch process receiving information on stolen vehicles. Law enforcement agencies use their data system to receive text and audible alerts when they query a vehicle that has been reported as stolen. The text alert shows up as white text on a red background at the top of the officer's screen. Stolen vehicle checks are performed each time an officer queries a vehicle, and stolen vehicle checks are performed both by tag number and VIN number when available. Stolen vehicle checks through ELVIS are performed statewide through FCIC and nationally through NCIC. The vehicle data system removes flags when a stolen vehicle has been recovered or junked. Law enforcement agencies report initial information for flag removal, and the stolen vehicle flag is removed from the vehicle data system through a nightly batch process. This end-to-end process is exemplary and Florida is a good example in this area for other states to reference.

The Florida vehicle system data can be used to verify and validate the vehicle information during initial creation of a citation or crash report. Law enforcement agencies using the state funded FCIC/NCIC system, ELVIS, have access to the vehicle and driver system through queries of tag numbers, VIN numbers, decal numbers, title numbers, and driver license numbers while they are creating initial crash and citation forms.

Florida does not print a barcode on registration documents, but law enforcement obtains

the vehicle information effectively. Queries performed through ELVIS return real time information from the vehicle and driver systems of all 50 states and Canada, allowing the officer to verify and validate the responses while on scene with the vehicles and drivers present. This information can also be automatically populated onto crash and citation forms using the State-funded crash and citation reporting software, TraCS.

Florida grants authority to quality control staff working with the statewide vehicle system to amend obvious errors and omissions. Regional office administrators/supervisors also have the authority to amend other types of errors and omissions in the vehicle data system.

To provide oversight, Florida preforms some transaction analyses and audits five percent of driver license and motor vehicle transactions to ensure the accuracy of the processed data. Also, the State uses its the Performance Accountability Measurement System (PAMS) report to track some of the transaction processes such as the average appointment wait time or the total number of stakeholder outreach events.

In addition, the State uses several procedures to detect high frequency errors and to update training materials. Transactional reviews are performed, and common errors are analyzed when detected. Any procedural updates or revisions that may contribute to reducing the error are suggested to the Bureau responsible for updating manuals and procedures. Also, if it is determined that enhanced training is needed to assist in mitigating these frequent errors, recommendations are made to the training development area. Data quality feedback from key users is communicated through State's Work Request Authorization and Prioritization (WRAP) process, the Technical Assistance Center (TAC), and the field support desk. WRAPs are then prioritized through DHSMV's Tier I, II and III governance process. Technical alerts are sent out to all tax collector personnel for any changes made to the system or advising of any known issues. This is another category that Florida has done very well in and is a good example for other states.

Overall the Florida systems are meeting and excelling in a number of key advisory ideals. There are, however, some categories that have room for improvement.

#### **Opportunities**

A barcode on the registration document would be helpful if ELVIS were not accessible or for other States that have barcode readers. The 2D PDF417 standard endorsed by the American Association of Motor Vehicle Administrators is recommended.

The data dictionary would be improved if it contained edit checks and data collection rules.

Documentation covering steps from initial event to final entry into the vehicle data system would be improved with a process flow diagram depicting the vehicle data system.

Performance measures for the recommended quality controls would enable managers to determine areas needed improvement.

#### **Driver Recommendations**

 Improve the data quality control program for the Driver data system to reflect best practices identified in the Traffic Records Program Assessment Advisory.

#### Summary

The Department of Highway Safety and Motor Vehicles (DHSMV) has custodial responsibility of the Florida Driver License Information System (FDLIS). The driver data system maintains records of all Florida drivers with critical information such as the driver's license number, license type, license status, conviction history, and crash involvement.

Florida captures and retains the dates of original issuance for all permits, licenses, and endorsements. The State maintains the Traffic Citation Accounting Transmission System (TCATS). Driving under the influence (DUI) and other traffic citations are reported from TCATS to FDLIS. In addition, the State has a data system that tracks education, enforcement, and treatment information related to DUI offenders. The Florida driver system contains detailed driver's traffic violation information, and the system captures the course type and the date of completion of driver improvement courses. However, the State's driver data system does not capture information on novice drivers' training histories.

The State's driver data system interacts with the National Driver Register's Problem Driver Pointer System (PDPS) and the Commercial Driver's License Information System (CDLIS). The contents of the Florida driver data system are documented with data definition for each data field. Edit checks and data collection rules are performed as part of the driver data system update processes. Florida is in the process of documenting those rules through the Motorist Modernization efforts. The data dictionary is updated as needed due to, for instance, legislative changes or requests from data system users.

Florida maintains the Driver License Operations Manual with detailed information related to the licensing, permitting, and endorsement issuance procedures. The State maintains process flow documents detailing the reporting and recording of relevant citations and convictions. Ninety percent of citations and convictions are submitted electronically from TCATS to the driver data system. Florida has a process flow diagram outlining the driver data system's key process flows and performs both automated and manual error correction or error handling processes. The State also has documented procedures and rules for purging data from the driver data system.

Florida has complied with Federal Real ID requirements since January 2010. The State has established extensive procedures to detect false identity licensure fraud for all driver licenses including commercial driver licenses (CDL). Florida has a DL Fraud Unit for complaints of possible fraudulent activity and the Quality

Assurance Program which conducts reviews of driver license and motor vehicle transactions to determine compliance with federal, state laws, regulations, and policies. Policies and procedures to maintain appropriate system and information security are

well established, as well as laws, rules, and procedures that regulate proper access and release of driver information from the driver data system.

Separate from the use of various systems (e.g., Driver and Vehicle Information Database) for interface between them, the Florida driver and crash data systems are not directly linked. However, there are direct linkages between Florida driver data system and the State's citation and adjudication systems. In addition, there is an interface link between the driver system and the Problem Driver Pointer System (PDPS), the Commercial Driver License Information System (CDLIS), the Social Security Online Verification (SSOLV) and the Systematic Alien Verification for Entitlements (SAVE) system. The State's law enforcement agencies can have granted access to the driver data system through the Driver and Vehicle Information Database (DAVID). Florida also has the capability to grant access to information in the driver system through DAVID to authorized court personnel and authorized personnel from other States.

Florida does not have a formal, comprehensive data quality management program for the driver system, as envisioned in the Advisory. However, the State has the Quality Assurance Unit which performs quality assurance processes for data management and produces reports, for specific jurisdictions, indicating the number and the percentage of specific driver system data elements (e.g., name, DOB, etc.) that are processed completely, accurately, or in compliance with DHSMV's policies and procedures. Florida has edit checks and validation rules for the driver data system. In addition, several methods are used to identify errors such as quality assurance reviews, customer complaints, and member contact with the procedure group. The Quality Assurance Program conducts independent reviews at the request of law enforcement and DHSMV and/or Tax Collector personnel for improper issuance or non-compliance with DHSMV policies or procedures. The State does not have established performance measures and numeric goals for timeliness, accuracy, completeness, uniformity, integration, and accessibility of the driver data system.

#### **Opportunities**

Florida should establish procedures to capture novice drivers' training histories, including provider names and types of education. Likewise, the driver data system should capture detailed information on driver improvement training history. The State should also establish a link between crash and driver data system.

Although many components and characteristics of the Florida driver data system are impressive, the State should consider start developing a formal data quality control program. Such a program will allow the State a greater ability to fully understand the quality of their driver data system. Establishing performance measures such as timeliness, accuracy, completeness, uniformity, integration, and accessibility, will be a great tool for data managers and data users to quickly and easily recognize areas in the driver system that need improvement.

In addition, the State should consider performing periodic independent sample-based audits to examine driver reports and conducting periodic comparative and trend analyses to identify unexplained differences in data across years and jurisdictions.

Finally, data quality reports based on performance measures should be created and provided to the State's TRCC committee for regular review.

#### **Roadway Recommendations**

- Improve the applicable guidelines for the Roadway data system to reflect best practices identified in the Traffic Records Program Assessment Advisory.
- Improve the data dictionary for the Roadway data system to reflect best practices identified in the Traffic Records Program Assessment Advisory.
- Improve the interfaces with the Roadway data system to reflect best practices identified in the Traffic Records Program Assessment Advisory.

#### Summary

The custodian of Florida's roadway data system is the Florida Department of Transportation (FLDOT). Currently FLDOT collects only a limited amount of data on higher functional classes of roadways. FDOT does not currently collect local roadway data, and local agencies do not currently have the ability to submit roadway data to the State's statewide roadway data system. Specifically, the roadway inventory only covers state maintained centerline miles and roads functionally classified above "local", which accounts for approximately 25% of the total roadway centerline miles. Also, only the state-maintained roadways are in the location referencing system; they are less than 10% of the centerline miles of public roadways within the state.

The State has indicated that not all of the MIRE Fundamental Data Elements are collected for all public roads, and any additional collected data elements do not conform to the data elements included in MIRE.

The State has the ability to identify crash locations using a referencing system which is compatible with the one used for roadways for State-maintained roadways. The FDOT State Safety Office processes crash locations by referencing the feature data on actively maintained roadways and determines crash coordinates within the linear-referencing framework. Crash data is incorporated into the enterprise roadway information system for State-maintained roadways. The FDOT State Safety Office locates all crashes reported on a Florida Traffic Crash Report long form and incorporates location references into the Roadway Characteristics Inventory linear referencing.

Since the roadway system does not include local system data, there are no performance measures for the quality of the local system data. Additionally, FLDOT did not have a documented accessibility performance measure nor a performance measure for data integration with other data systems. FLDOT has established performance measures for timeliness, accuracy, completeness, and uniformity. For the data collected, there are hundreds of pre-determined data quality checks for consistency and accuracy that are run by the data collectors, by District Statistics Administrators, and by quality control

personnel as needed. The State has not reported a formal, regular process to run these reports periodically.

The State additionally has well-documented procedures in the RCI Handbook and User Manual. This document should continue to be kept up-to-date. This documentation should also be expanded to include a data dictionary that includes all data elements and

to process updates to the data dictionary as needed.

Collected roadway data is automatically archived by FDOT to allow for historic querying.

Overall, the system functionality meets the advisory ideals; however, it is limited to the data collected on State-maintained roadways. Meeting the advisory would require the inclusion of data for all public roadways and to have performance measures applied to the entire system. In addition to including local data, consideration should be given to interfacing with regional and local data custodians, such as MPOs. The collected data elements should be updated for inclusion of the MIRE FDEs. Finally, a review of the data dictionary should be made with the addition of any data elements that might be needed to apply to the inclusion of roadway data for non-State-maintained roadways.

#### Citation / Adjudication Recommendations

- Improve the applicable guidelines for the Citation and Adjudication systems to reflect best practices identified in the Traffic Records Program Assessment Advisory.
- Improve the interfaces with the Citation and Adjudication systems to reflect best practices identified in the Traffic Records Program Assessment Advisory.
- Improve the data quality control program for the Citation and Adjudication systems to reflect best practices identified in the Traffic Records Program Assessment Advisory.

#### Summary

The State of Florida has established itself as a leader in the field of data collection and use related to traffic citations and their adjudication. One of the best ways to address traffic enforcement, in order to ensure that it is well-executed, provides ample return on investment, and is fairly and equitably adjudicated, is through a statewide citation tracking system. Florida has had such a system for several years--the Traffic Citation and Accounting Transmission System (TCATS). This system allows the State to track each citation through its lifecycle, from assignment of a number to issuance to a violator to transmission to court, through the adjudication of charges and, if appropriate, to the driver history file. This tracking provides a great deal of useful information to traffic safety professionals. The data can be used to monitor the effectiveness of enforcement in preventing or mitigating the severity of crashes and is used in the State of Florida to identify the best way to design educational campaigns and directed enforcement activities.

The Florida Department of Highway Safety and Motor Vehicles (DHSMV) is responsible

Florida Traffic Safety Information System Strategic Plan

for centralized citation numbering for both paper and electronic citations. This oversight prevents duplicate numbers and sets up a means by which to ensure that citations, once issued, are tracked throughout their lifecycles, no matter whether the prosecutor declined to file the charges, or while charges are pending during a deferral period.

Court data is kept in a single system as well, using the Court Clerk Information System (CCIS) that includes all data from all courts. Also, these excellent systems are supported by robust data dictionaries that serve to assure that data collection is uniform and that data users are adequately informed about the quality of the data they analyze. The TCATS system updates are followed by additional training about the changes and by updates to the documentation for users. The State appears to use the newest versions of software available for it's Court Management systems.

While Florida's state-of-the-art systems are very commendable, there remain several opportunities to improve. Information regarding dismissed charges and pending charges related to deferrals is not captured on the driver history file, a fact which limits analysis of driver behavior.

Having the ability to track impaired drivers could be improved through the development of a comprehensive DUI tracking system. Such systems should be interactive, available to all those who provide services to DUI violators and prevent reinstatement of driving privileges until all court-ordered or administrative sanctions have been fulfilled. Additionally, such a tracking system should include fees and fines paid by impaired drivers.

The ability to record all types of education (and curricula), treatment, assessment, sanctions (such as ignition interlock) and therapy assigned to these drivers allows the State to assess what types of programs and sanctions are most effective in preventing recidivism and allowing the drivers to become compliant and re-enter the system, which gives more incentive to remain compliant with requirements and laws.

The State has wisely elected to audit on request and provide data to individual agencies related to their timeliness and accuracy. This is a means of encouraging law enforcement agencies to maximize their efforts to provide excellent data and assures that State systems managers have an indication of the health of their data systems. The State would be well served to develop and measure other system aspects, such as completeness, integration, uniformity, and accessibility. While having most citations issued electronically does positively impact uniformity and completeness, measurements help to insure that these aspects of the data remain optimal. Even when edits catch incomplete data fields, it is important to measure and calculate which fields are problematic to determine why the problem exists. Then solutions to solve the problem(s) can occur. Even with excellent data quality, some aspects of data may at times degrade. Having a means to measure and keeping track of such measures insures that degradation of data quality may be quickly uncovered and equally quickly addressed. Florida's citation and adjudication appears to be excellent and measures help to make that fact clear.

#### EMS / Injury Surveillance Recommendations

Improve the description and contents of the Injury Surveillance systems to

- reflect best practices identified in the Traffic Records Program Assessment Advisory.
- Improve the interfaces with the Injury Surveillance systems to reflect best practices identified in the Traffic Records Program Assessment Advisory.
- Improve the data quality control program for the Injury Surveillance systems to reflect best practices identified in the Traffic Records Programs Assessment Advisory.

#### Summary

An ideal statewide Injury Surveillance System (ISS) is comprised of data from five core components: pre-hospital emergency medical services (EMS), trauma registry, emergency department, hospital discharge, and vital records. This data provides more detailed information on the nature and extent of injuries sustained in a motor vehicle crash than can be found in other components of the traffic records system. Consequently, this information is invaluable when determining the severity, cost, and clinical outcomes of the individuals involved and can be used to support injury prevention programs on the State and local level.

Overall, Florida collects and maintains information on all five components; the Emergency Medical Services Tracking and Reporting System (EMSTARS), the Florida Trauma Registry and vital records system maintained by the Florida Department of Health and Environment; and the emergency department and hospital discharge data maintained by the Agency for Health Care Administration. While this data has been used to provide basic information related to motor vehicle crashes in the State, there is an opportunity for more extensive coordination and use of these resources.

#### **Emergency Medical Services**

Florida's EMSTARS is a NEMSIS compliant database of patient incident records submitted by the majority of EMS agencies in the State. Since aggregate reporting of EMS data is mandated (by Florida Administrative Code 64J-1.014), participation in EMSTARS is voluntary. The system was developed to bring the State into NEMSIS compliance and to allow EMS providers the ability to collect incident level data that can be used to improve health care delivery and support injury prevention activities. The ability to collect information, develop benchmarks, and assess trends in Florida's EMS system is critical to ensuring the protection, promotion and improvement of the health for all people in Florida. Florida is currently the highest-ranking state in total number of records submitted to NEMSIS.

The Emergency Medical Services Section encourages the use of EMS data for the advancement of medical research as well as for local, regional, and State-level quality improvement efforts. Aggregated State-level reports and data request forms can be found on the Department of Health's website.

The Emergency Medical Oversight Continuum of Care Data Warehouse currently hosts data from the EMSTARS patient care records that are linked with hospital discharge and emergency department data from the Agency for Health Care Administration. A comprehensive data warehouse business strategy is under development to enhance this capability to ensure valid health information is accessible to researchers and providers in the State. This linkage provides a wealth of information and consideration should be given to adding additional traffic record components, notably crash, to the warehouse.

#### Trauma Registry

The Florida Trauma Registry collects patient data from the State's 27 trauma centers as authorized by Florida Statute. Additionally, as of January 2015, data is also collected on trauma cases that are treated at the State's acute care hospitals. The State's trauma registry is based on the National Trauma Data Standard with the addition of several State-specific fields. The trauma registry data manual describes the data elements, the inclusion criteria, and the reporting requirements.

Performance reporting is conducted through quarterly compliance reports created for each trauma center. The report tracks the number of records submitted, the number of late records, and the number of records exceeding the error threshold. An annual report summarizing the reasons for rejecting records is also produced. Data quality and reporting issues are addressed regularly between the Department of Health and individual trauma centers.

The trauma registry data is used by the individual trauma centers to support a variety of activities, including performance improvement, outcomes research, and resource utilization. Data is also used by the Department of Health to support statewide planning and injury prevention initiatives.

#### **Emergency Department and Hospital Discharge Data Systems**

The Agency for Health Care Administration collects and maintains data for all inpatient, emergency department, ambulatory surgery, and outpatient services from 269 of the State's 294 facilities. Approximately 2.5 million inpatient records and 5.5 million emergency department records are collected each year.

Hospital data can be requested through the Florida Center for Health Information and Policy Analysis. The Center also maintains a website, FloridaHealthFinder.gov, that contains data dictionaries, data use agreements, and a query tool. In 2014, there were 17,739 persons admitted to a hospital as the result of a motor vehicle crash. The average charge for these patients was \$116,971.

#### Vital Records

The Florida Department of Health's Bureau of Vital Statistics collects and maintains all vital records for the State, including mortality data. Vital records are used regularly to identify problems related to motor vehicle crashes including a recent report describing fatal and non-fatal injuries sustained by children under 5 years of age. Data may be requested from the Bureau of Vital Statistics with an approved data use agreement.

With the system components that are in place, there are some considerations that may

help the State maximize the use of its injury surveillance system to support its highway safety efforts. First, all ISS components should have representation on the TRCC. At the very least, communication should be enhanced to identify opportunities to increase the use of ISS data as is currently being done with the trauma registry. Second, to evaluate and improve data quality of these systems, performance measures for each should be established. While States generally have guidelines related the timeliness, accuracy, and completeness of reports, performance measures can be used to regularly keep track of each system's function, progress, and success. The 'Model Performance Measures for State Traffic Records Systems' publication provides example performance measures for each attribute and data system. Third, efforts should be made to require submission of record level data to the State and to obtain data from 100% of the State's ambulance services into EMSTARS. Fourth, use the ICD codes in the hospital databases to derive a severity score. Using hospital data to define serious injuries is more objective than using the KABCO score from the crash report. Finally, as mentioned earlier, crash data should be included in the Continuum of Care Data Warehouse if feasible. Florida should be commended for continuing its efforts to develop its core injury surveillance data into an important resource to define, evaluate, and support highway safety programs and projects.

#### **Data Use and Integration Recommendations**

• Improve the traffic records systems capacity to integrate data to reflect best practices identified in the Traffic Records Program Assessment Advisory.

#### Summary

The State of Florida has been very successful in the area of Data Use and Integration. There is access to crash and citation data through an Internet portal that contains ad hoc reporting and the ability to create some analytics capability. In addition, behavioral program managers have access to a robust crash system portal that maps and classifies crashes by type and circumstance.

Successful linkages of various data sources were reported. In particular, citation and adjudication data, driver data, vehicle data, Florida Highway Patrol activity data have been integrated into a singular data warehouse at DHSMV where analytics can be performed. Ad-hoc analysis is performed for legislative needs, grant purposes, and research through the DHSMV performance management office. Analyses were provided that link driver demographics, vehicle type, and citation data. Crash data is integrated with vehicle data for purposes of analysis and has been used to determine the crash involvement of vehicles with the title brand "rebuilt" in crashes. Reports were provided covering analyses of crash incidences involving newer versus older vehicles and involving rebuilt vehicles.

Opportunities exist to explore additional linkages. Roadway and crash data have not yet been linked, nor have crash and injury surveillance data.

# **B.** Strategic Planning Participants

#### **Executive Board Members**

- 1. Beth Allman, Chair, Florida Court Clerks and Comptrollers
- 2. Steve McCoy, Vice Chair, Florida Department of Health
- 3. Lora Hollingsworth, Department of Transportation
- 4. Robert Kynoch, Department of Highway Safety and Motor Vehicles
- 5. David Brand, Florida Sheriffs Association
- 6. Chief Virgil Sandlin, Florida Chief's Association
- 7. Major Gary Howze, Department of Highway Safety and Motor Vehicles / FHP

#### **Other Participants**

- 8. Danielle King Department of Transportation
- 9. Chris Craig Department of Transportation
- 10. Joe Santos Department of Transportation
- 11. Benjamin Jacobs Department of Transportation
- 12. Joey Gordon Department of Transportation
- 13. Andrea Hodge Department of Transportation
- 14. Major Jeffrey Dixon Florida Highway Patrol / Department of Highway Safety and Motor Vehicles
- 15. Stephanie Duhart Department of Highway Safety and Motor Vehicles
- 16. Deborah Todd Department of Highway Safety and Motor Vehicles
- 17. Richie Frederick Department of Highway Safety and Motor Vehicles
- 18. April Langston Department of Highway Safety and Motor Vehicles
- 19. Thomas Austin Department of Highway Safety and Motor Vehicles
- 20. Thomas Rast Department of Highway Safety and Motor Vehicles
- 21. Brenda Clotfelter Florida Department of Health
- 22. Joshua Sturms Florida Department of Health
- 23. Amy Pontillo Cochran Florida State University
- 24. Zoe Williams Florida State University
- 25. Lisa Spainhour Florida State University
- 26. Ilir Bejliri University of Florida
- 27. Ebony Herring Agency for Health Care Administration
- 28. Anat Michaeli-Ling Department of Highway Safety and Motor Vehicles
- 29. Keely Weaver Department of Highway Safety and Motor Vehicles
- 30. Dana Olvera Department of Highway Safety and Motor Vehicles
- 31. Michael Randall Lexis Nexis
- 32. Gary Sammet Florida Department of Health
- 33. Ken Jones Florida Department of Health
- 34. Yasmine Fucci Florida Department of Health
- 35. Felipe Lorenzo-Luaces Florida Department of Health
- 36. Sandy Richardson National Highway Traffic Safety Administration
- 37. Danny Shopf Cambridge Systematics, Inc.
- 38. Melissa Gonzalez TRCC Coordinator, Department of Transportation

# Appendix C Action Plan for the 2017-2021 Florida Traffic Records Strategic Plan

### GOAL 1: Provide ongoing coordination in support of multi-agency initiatives and projects which improve traffic records information systems.

## Objective 1: The TRCC Executive Board will meet three times per year with 70 percent participation from representative agencies.

**Strategy 1.1:** Conduct Executive Board meetings no fewer than three times each calendar year.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
1.1a	<ul> <li>Examine current TRCC Charter to determine membership qualifications and expectations</li> <li>Establish and implement pre-meeting procedures to ensure 70 percent membership participation in each full Executive Board meeting</li> <li>Develop procedure for designating alternates for Executive Board members</li> </ul>	Number of TRCC Executive Board meetings each year with 70 percent participation	Quarterly	TRCC Chairperson	TRCC Executive Board Meeting were held on: FY 19- 12/6/2019; 4/03/2020; 9/11/2020 FY 20- 12/4/2021; 4/09/2021
1.1b	Conduct subcommittee meetings with data managers, as needed  Identify data managers for agencies with systems to participate in the TRCC	Number of TRCC data manager meetings each year w/70% participation	Ongoing	TRCC Coordinator	Application Subcommittee meetings: 3/15/2019; 3/13/2020  Go Team Subcommittee (AKA Data Subcommittee) met on 1/31/2020 for final report of the North Highland (NH) Project: FDOT Crash Analysis Reports (CAR) System and Signal Four Analytics (S4)
1.1c	Develop a comprehensive meeting summary for each TRCC Executive Board meeting  Include percent of member participation	Meeting Summary is developed and approved at the following TRCC Meeting	Quarterly	TRCC Coordinator	Meeting minutes approved by Executive Board for all dates up to Dec. 6, 2019

### Objective 2: Establish roles and responsibilities for the TRCC Executive Board and subcommittees.

**Strategy 2.1:** Ensure TRCC membership includes agencies and organizations representing key data collectors, managers and users or members who are positioned to share traffic data information with pertinent organizations.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
2.1a	Review current TRCC membership to identify missing data systems or agencies with data interests not currently represented	Gaps in representation identified, additional members invited	Ongoing	TRCC Coordinator	<ul> <li>Florida Department of Law Enforcement (FDLE) member added (FY20)</li> <li>FHP member added (FY20)</li> <li>FDOT Law Enforcement Liaison Program Manager added (FY20)</li> </ul>
2.1b	Identify similar working groups (e.g., Safe Mobility for Life/ Aging Road Users Coalition) with strategic plans which include a data component and ensure the TRCC includes representatives from those groups, or that a TRCC member shares traffic data information between the two groups	Similar working groups with traffic data goals or projects identified	Ongoing	TRCC Coordinator	

### **Strategy 2.2:** Promote and market TRCC work through information sharing.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
2.2a	Establishing a master calendar of potential participation opportunities	Master calendar established;	Ongoing	TRCC Coordinator	Calendar maintained on TRCC website
2.2b	Coordinating and communicating data needs among data collectors, managers, and users	Mechanism to share traffic data information established among similar working groups	Ongoing	TRCC Coordinator	Go Team Final Recommendations provided to TRCC on 12/7/2018 and on 4/5/2019  NH FDOT CAR/S4 Project began 12/5/2019-Conducted Gap Analysis for S4/CAR capabilities and crash data process, created Crash System Business Context Diagrams.  Close out presented to Go Team (Data) Subcommittee on 1/31/2020  NH Final Report Out provided to TRCC Executive Board on 4/3/2020
2.2c	Reporting on outreach efforts to other groups	Outreach efforts conducted and reported	Ongoing	TRCC Coordinator	Outreach conducted as needed

# **Strategy 2.3:** Establish TRCC roles and responsibilities.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
2.3a	Establish roles and responsibilities for TRCC Executive     Board     Identify present Executive Board roles and responsibilities     Discuss and develop Executive Board roles and responsibilities with input from all members	Executive Board roles and responsibilities established	Complete	TRCC Chairperson	Complete: TSIS 2017-2021
2.3b	Establish roles and responsibilities for Executive Board assigned subcommittees     Identify past/present subcommittees roles and responsibilities     Develop subcommittees roles and responsibilities with input from all members	Working group roles and responsibilities established	Ongoing	Executive Board	Application Subcommittee established on March 23, 2017. Meetings: 3/15/2019; 3/13/2020  Go Team (Data) Subcommittee established on August 17, 2018. [Consists of TR Data System Subject Matter Experts (SMEs)]  Geo-Location Tool Subcommittee established on April 5, 2019

# Strategy 2.4: Establish TRCC subcommittees.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
2.4a	Establish at least one data subcommittee under the Executive Board	Data subcommittee established	April 2018	Executive Board	Formally initiated: 3/29/18 Go Team Subcommittee members AKA Data Subcommittee consists of SMEs representing each TR data system - established on 8/17/2018
2.4b	Establish reporting responsibilities for TRCC subcommittee group Chairpersons		Ongoing	TRCC Coordinator	The TRCC Coordinator serves as the Chairperson for all subcommittees and manages reporting responsibilities.  Responsibilities delegated as needed for: Go Team Phase II (6/10/19 close out) and NH FDOT CAR/S4 Project (1/31/2020 close out)
2.4c	Establish reporting mechanism/protocols for subcommittees Chairpersons  • Subcommittees Chairpersons follow established protocols and report to the Executive Board	Reporting protocols established	Ongoing	TRCC Coordinator	The TRCC Coordinator will serve as the subcommittees chairperson and updates the Executive Board as necessary.

Florida Traffic Safety Information System Strategic Plan

2.4d	TRCC Coordinator monitors the progress of subcommittees activities	Number of reports/briefings provided in compliance with protocol	Ongoing	TRCC Coordinator	Go Team (Data) Subcommittee - update provided to Executive Board at 12/7/2018 and at the 4/5/2019 TRCC meeting
					Application Subcommittee meetings: 3/15/2019; 3/13/2020; reported to Executive Board April 2019 and 2020.
					NH Final Report- update provided to Executive Board at 4/3/2020 TRCC meeting

# Objective 3: Develop a 5- year Traffic Records Information System (TRIS) Strategic Plan by FY17.

**Strategy 3.1:** Develop a Traffic Records Information System (TRIS) Strategic Plan.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
3.1a	Ensure all TRCC members participate in the development of the TRIS Strategic Plan and selection and prioritization of the projects in the Plan  • Address other needs identified by canvassing collectors, managers, and users of each traffic records system component	5-year TRIS Strategic Plan developed	June 2017	Executive Board	Complete. The TRCC developed a five-year Traffic Safety Information System Strategic Plan for years 2017 through 2021; Approved 4/7/2017
3.1b	Develop TRIS Action Plan     Identify performance measures for the TRIS     Action Plan     Identify performance measures for each system and project based on guidelines in NHTSA's Model Performance Measures for State Traffic Records Systems	TRIS Action Plan Developed	Updated Annually	TRCC Coordinator	FY21 State Application: Action Plan (FY20) updates received on 3/20/2020 and 4/16/2020

### Objective 4: Track progress quarterly of TRIS Strategic Plan implementation through December 2021.

**Strategy 4.1:** Implement the Traffic Records Information System Strategic Plan

Action Step	Description	Performance Measure	Timeline	Leader	Notes
4.1a	Establish reporting mechanism and protocols to track progress quarterly of the performance measures for each system and project in the TRIS Strategic Plan	Reporting mechanism and protocols established	Quarterly	Executive Board & Project Directors	Reporting mechanism and protocols established Updates provided at each TRCC meeting
4.1b	Track progress of performance measures for each system and project in the TRIS Strategic Plan	Project activity reported	Quarterly	Executive Board & Project Directors	Updates provided at each TRCC meeting
4.1c	Report progress on meeting performance measure goals to the TRCC quarterly.	Progress reports submitted to TRCC Executive Board quarterly	Quarterly	Executive Board and Project Directors	Goal leaders report on quarterly progress

### Objective 5: Ensure the Section 405(c) grant application is approved and submitted to FDOT by June 1st annually.

Strategy 5.1: Report on progress in achieving TRIS Strategic Plan goals and objectives at each TRCC Executive Board Meeting

		<u> </u>			
Action Step	Description	Performance Measure	Timeline	Leader	Notes
5.1a	Include items on each TRCC meeting agenda regarding progress reports on each system and project	Progress documented in meeting minutes	Each Meeting	TRCC Coordinator & Project Directors	Quarterly updates reported at all TRCC meetings.
5.1b	Include items in each TRCC meeting agenda regarding status of quality measures for each system and project	Progress documented in meeting minutes	Each Meeting	TRCC Coordinator & Project Directors	Quarterly updates reported at all TRCC meetings.
5.1c	Submit an interim progress report to NHTSA prior to annual submission deadline	Interim Progress Report submitted	April/May (Annually)	TRCC Coordinator	FY20- Interim progress report submitted to NHTSA on 4/22/2019; Pre-approval received 5/29/2019. FY21- Interim progress report submitted to NHTSA on 4/8/2020; Pre-approval received 4/30/2020.
5.1d	Submit a TRCC approved Section 405(c) Application to FDOT by June 1st annually	405(c) grant application submitted by June 1st	June 1st (Annually)	TRCC Coordinator	FDOT Pre-approval required before NHTSA July 1st submittal date

# GOAL 2: Develop and maintain complete, accurate, uniform, and timely traffic records data.

# Objective 6: Improve the completeness of traffic records systems by December 2021.

**Strategy 6.1:** Improve the completeness of the **Crash Data System** by expanding collection of crash reports to include collection of Short Form Reports.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
6.1a	Establish and maintain complete data collection of local crash reports, both long form and short form reports for ALL participating law enforcement agencies (LEAs)	Percent of crash records with no missing critical data elements	July 2012 (Complete)	FLHSMV	
6.1b	Develop an analytical approach (scorecard) that identifies the root cause of the common errors discovered and reasons for incomplete crash reports.  • Establish performance measurements (baselines) based on previous FY crash data for crash report accuracy and completeness.  • Analyze number of reports in the crash data base that would fail one or more of the measures established for accuracy.  • Disseminate conclusions by conducting LEA trainings to reduce error rates by 5 percent each year.	Improve accuracy and completeness of crash reports from baseline data.	January 2017 (Complete) September 2019 (complete) September 2019 (complete) September 2019 (complete)	FLHSMV	FY19 Project: FLHSMV conducted 8 regional crash workshops and 6 UTC workshops to further educate LEAs on what constitutes as an accurate and complete reporting  FY19 Project: FLHSMV created and distributed Accuracy, Completeness and Timeliness scorecards covering the 3 <sup>rd</sup> quarter of 2019 (July, August and September) to LEAs. Timeliness was added to this project and these reports will be distributed quarterly  Objective Met: Improved by 5%  FY20 Project: FLHSMV continued to distribute scorecards each quarter; Objective to conduct 4 stakeholder meetings for crash report revision feedback- TBD due to Covid-19
6.1c	Establish and maintain a viable communication plan with vendors, agencies and other stakeholders  Establish a process for formalizing feedback to LEAs  Establish and maintain current contact information on key players (vendors, agencies, OPS, FLHSMV)  Develop and maintain an online crash manual that is relevant with current practices, policies, and procedures	Law enforcement contact information updated; online crash manual developed and reviewed for updates	Annually	FLHSMV	Contacts updated – January 2019 Online crash report manual completed and published on 2/5/19  FY19 Project TraCS to add help functionality in software that will link to the updated crash manual as a PDF online (May 2019)- Completed

**Strategy 6.2:** Improve completeness of the **Roadway Data System** by reaching out to local governments and community safety organization for coordination on roadway data-gathering for roads under local jurisdiction not covered by the Department's Integrated Roadway Asset Identification System (IRAIS- aka RCI Rewrite).

Action Step	Description	Performance Measure	Timeline	Leader	Notes
6.2a	Work with local governments to maintain relationships for the sharing of local roadway data	Maintain a contact list of the number of local relationships established and inventory the number of characteristics collected.	December 2021 (with census update)	FDOT State Safety Office (SSO) and Transportati on Data Analytics Office (TDA)	FDOT has met with MPOAC to coordinate SHSP safety goals  List of contacts (2 contacts per city). Summary data is provided; 480 entities
6.2b	Gather an inventory of existing data from local governments, MPOs or transportation planning organizations (what are they willing to share)		December 2021 (with census update)	FDOT SSO and TDA	FDOT TDA and Office of Policy Planning will be planning on the Decennial update of Urban Boundaries and Functional Classifications starting 2021
6.2c	Establish a plan to collect additional public roadway data to include local roadway data  Evaluate / Review current data and processes  Establish a needs and requirements document to meet all local and federal reporting requirements  Develop and conduct a survey to determine the number of additional attributes that should be collected		December 2021 (with census update)	FDOT SSO and TDA	
6.2d	Coordinate MIRE requirements with roadway database owners  Identify MIRE elements to the RCI Handbook for reference Review current inventory in existing SSO and Roadway Databases Identify MIRE to include in IRAIS Project (RCI Rewrite)	Maintain an established inventory of the number of contacts made and the number of elements included.	December 2021	SSO and TDA; Traffic Operations; Roadway Design	Crosswalk developed – Traffic OPS Charter currently in place; Identified needs weekly meetings Anticipated vendor to be in place by June 2019. Not all data components have been established. ARNOLD Data Set consists of a layer of all public roads Submitted to FHWA to meet federal requirements. Additional work still needed to fully merge local roads data with current FDOT linear referencing system. Safety Office continues to update the All Roads Basemap based on NavTeq/HERE dataset

Florida Traffic Safety Information System Strategic Plan

6.2e	Evaluate potential base map considerations     ARNOLD; ARBM; NavTeq (HERE); RCI LRS		January 2021	SSO and Traffic Operations	SSO and GIS Solutions have discussed current modifications needed to the HERE contract agreement to allow the HERE NAVSTREETS data to be shared with USDOT FHWA to meet federal requirements
6.2f	Publicize the Department's local roads map and encourage use of the map by local governments in their own applications and data interfaces  • Develop software tools for internal use to create links between local roadway/map data and the FDOT's local roadway dataset	Number of downloads of the UBR (Identify baseline)	Annually	SSO and TDA; CIM (Civil Integrated Management)	TDA has made the ARNOLD dataset available for Department use on its internal network.  SSO is releasing a GIS map service of the ARBM to share with Florida government partners in traffic safety before the end of FY21
6.2g	Identify and evaluate current FDOT Roadway data dictionaries		December 2021		ROADS Initiative will address updates to data dictionaries through data stewards and custodians

**Strategy 6.3:** Improve completeness of the **Citation/Adjudication System** by monitoring data elements and identifying those elements which are 'critical' and increase the completeness of these fields by 3 percent annually.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
6.3a	Review and evaluate existing data; identify critical elements by data mining to compare completeness of data  Compare DUI conviction data from the court's dispositions to Driver Record Conviction data to identify incomplete records.  Establish a baseline for UTC completeness  Maintain training on how to complete the UTC  Review Clerk of Court (COC) case management software systems	Percent of citation records with no missing critical data elements (target – 3% increase per year).	Annually	FLHSMV	FY19 Project: FLHSMV to conducted 8 regional crash and 6 UTC report trainings to further educate LEAs and COC on what constitutes as an accurate and complete reporting. Improvement Goal 98.5%; Actual Performance 97.83%; 4 COC case management software reviewed. UTC Completeness baseline was established on 01/05/2018  FY20 Project: FLHSMV to conduct 4 stakeholder meetings for crash report revision feedback, conduct 4 train-the-trainer UTC workshops w/Clerks, review at least 4 COC case management systems, increase completeness/accuracy of citation reporting by 3%. All UTC workshop locations have been identified. There is a total of 6 UTC trainings and 6 case management systems reviews scheduled- workshops TBD due to Covid-19

**Strategy 6.4:** Improve completeness of the **EMS System** by continuing to work to increase the number of emergency runs submitting to the state EMSTARS repository.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
6.4a	Work on identifying high-volume agencies on their aggregate system and transition agencies to EMSTARS	Number of agencies reporting to EMSTARS contributing to the statewide database	Quarterly	FDOH	FY19- 203 agencies reporting to EMSTARS FY20- 210 agencies reporting to EMSTARS
6.4b	Assist agencies with mapping issues, software to enable transition to most current NEMSIS data standard etc.	Number of critical data elements monitored.		FDOH	Currently monitoring 5 critical data categories as defined by NEMSIS
6.4c	Review and refine the list of critical data elements	Number of critical data elements monitored	December 2018	FDOH	Currently monitoring 5 critical data elements
6.4d	Reduce the number of missing critical elements (blank elements)	Percent of EMS records with no missing critical data elements	Quarterly	FDOH	FY19- 89% of agencies are reporting with valid data from the 5 data categories  FY20- 90% of agencies are reporting with valid data from the 5 data categories

# **Strategy 6.5:** Improve completeness of the **Trauma System**.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
6.5a	Increase the number of acute care hospitals submitting to the Trauma System	Percent of Trauma centers reporting complete and timely data		FDOH	Requested grant funding to conduct training to educate local EMS agencies on data collection standards.
6.5b	Quarterly reporting of compliance to Trauma Centers			FDOH	

# Objective 7: Improve accuracy of traffic records systems by December 2021.

**Strategy 7.1**: Improve accuracy of the **Crash Data System** by reducing errors by 5 percent per year.

Action	Description	Performance Measure	Timeline	Leader	Notes
Step 7.1a	Develop an analytical approach (scorecard) that	Improve accuracy and	January	FLHSMV	FY19 Project: FLHSMV conducted 8 regional crash and 6
7.10	<ul> <li>identifies the root cause of the common errors discovered and reasons for inaccurate crash reports</li> <li>Establish baselines for data accuracy based on previous FY crash report data.</li> <li>Analyze number of reports in the crash data base that would fail one or more of the measures established for accuracy.</li> <li>Disseminate conclusions by conducting LEA trainings to reduce error rates by 5 percent each year.</li> <li>Establish and maintain current contact and contact information on key players (vendors, agencies, OPS, FLHSMV)</li> </ul>	completeness of crash reports from previous FY baseline data by evaluating the number of crash reports in the crash data base that would fail established baselines due to validation errors.	2017 (Complete) Annually Annually September 2019 (Complete) Annually	T LI IOWV	UTC report trainings to further educate LEAs on what constitutes as an accurate and complete reporting.  Contacts updated – January 2019  FY19 Project: FLHSMV created and distributed Accuracy, Completeness and Timeliness scorecards covering the 3 <sup>rd</sup> quarter of 2019 (July, August and September) to LEAs. Timeliness was added to this project. These reports will be distributed quarterly. Objective Met: Improved by 5%  FY19 Project TraCS provides updates at TRCC meetings on which additional validation checks were added to the system as a result of common errors determined during FLHSMV trainings.  FY20 Project: FLHSMV continued to distribute scorecards each quarter; Objective to conduct 4 stakeholder meetings for crash report revision feedback- TBD due to Covid-19
7.1b	Continue to pursue improving the efficiency of the location coding process, including use of up-to-date maps and utilities  Obtain data on scheduled intervals for evaluation  Develop a web-based diagram tool in compatibility with S4's Geolocation tool  Develop a centralized crash locating database by creating tools in S4 Analytics for the FDOT Crash Analysis Reporting (CAR) System Analysts to manually verify all crash reports (meeting FDOT requirements).	Promote Signal 4 and Geolocation tool  Tool Developed  Tool Developed	Ongoing  September 2021 September 2021	FLHSMV  University of Florida (UF) FDOT FLHSMV	FLHSMV sent memo (12/21/2016) to LEA regarding using S4/Geolocation tool and held meetings with each of the state approved vendors. FY20: TraCS mandate in place for ~70% LEAs reporting crash reports (Jan. 2020).  FY20 Project Approved: Geolocation-Based Crash Diagramming & FDOT Crash Mapping to Improve Crash Location Timeliness and Quality  A portion of the regional FLHSMV Crash and UTC workshops will focus on the geo-location tool and the benefits it provides.
7.1c	Coordinate among the various providers to complete a mapping of all crash systems to identify any redundancies in crash systems and how they relate to one another.	Percent of crashes locatable using roadway location coding method Identify system owners, gathered data and data	Ongoing	FLHSMV FDOT FDOH UF	NHTSA Go Team Project Phase I completed.  NHTSA Go Team Project Phase II, Draft Final Report received April 1, 2019.
		process.			NH FDOT CAR/S4 Project began 12/5/2019-Conducted

Florida Traffic Safety Information System Strategic Plan

					Tioriaa Traffic Sujery Information System Strategie Tian
					Gap Analysis for S4/CAR capabilities and crash data process, created Crash System Business Context Diagrams. Close out presented to Go Team (Data) Subcommittee on 1/31/2020 and TRCC Executive Board on 4/3/2020.
7.1d	Develop and maintain an online crash manual that is relevant with current practices, policies and procedures	Online crash manual developed and maintained	Annually	FLHSMV	Online crash report manual completed (3/8/2018); Revised crash manual to reflect MMUCC new definition for Serious Injuries (2/5/2019)
7.1e	Reduce the occurrence of illegitimate null values from mailed in reports.  Check for missing fields Review excessive use of "unknown" and/or "other", decreasing the use of these options by 2 percent annually Implement a quality control process to ensure the accuracy and completeness of crash reports submitted via mail.	Reduce number of crash reports returned to Agency.	Annually	FLHSMV	FY19 Project: FLHSMV conducted 8 crash and 6 UTC report training events (2019). FLHSMV transitioned to a new vendor for key punching paper crash reports submitted via mail and is working to implement a quality control process.

# **Strategy 7.2:** Improve accuracy of the **Roadway Data System** by constant review and improvement in the QA/QC processes for the roadway dataset.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
7.2a	Expand coverage of data quality checks to include maps  • Annually review dataset edits and find ways to improve the monitoring of date error-correction	Number of new edits implemented	TBD	FDOT	LRS reconciliation process is monthly
7.2b	Perform a Quality Assurance Review Program for all Districts within 2 years	Number of District reviews conducted	Quarterly	FDOT	Natural Disaster and Travel ban impacted schedule (only 2 field visits conducted) but in office review was conducted
7.2c	Perform District Quality Evaluations to ensure Districts are meeting deadlines (RCI, HPMS, RITA, SLDs, Key Sheets, etc.)	Number of Evaluations completed	Biannual	FDOT	Completed all periods; Ongoing

**Strategy 7.3:** Improve accuracy of the **Driver Records System** by identifying and reviewing the use of inconsistent codes, comparing internal data

with an independent standard and reducing the frequency of duplicate record entries.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
7.3a	Review, evaluate, and analyze driver data to find errors, duplicates, and missing data entry elements by developing citation inventory system.	Number of driver records with missing data elements.	Dec. 2021	FLHSMV	New citation inventory system handles duplicate citation numbers Citation Inventory System will be included in the department's Motorist Modernization Phase II re-write of our systems. (August 2023)
7.3b	Track the number of duplicate record entries and reduce those entries by 6 percent in five years	Percent reduction in duplicate record entries (target – 1.2% per year)	Annually	FLHSMV	FLHSMV documenting conviction data edit requirements to increase accuracy  FLHSMV working on project to identify and delete duplicate records as part of onboarding process for State2State project
7.3c	Improve integrity of data by identifying and implementing a means to electronically receive and post-conviction codes for all serious and/or major offenses used by AAMVA/FMCSA so that driver record is accurate and consistent when transferred to other jurisdictions	Track the number of improvements based on federal or state laws.	Dec. 2021	FLHSMV	Modernization Project to improve Issuance system by redefining codes / business rules to unify four systems: DL / tag / title / and citation (Dec. 2021)  FY21 Driver Data Improvement grant requested to establish baseline data and measures for completeness and timeliness of the data in the driver system
7.3d	Continue to participate in workshops with AAMVA to achieve data accuracy  • Provide updates to crash and citation reporting vendors when AAMVA barcode formats change in Florida to ensure imports from barcode readers are successful.	Number of AAMVA workshops attended	Annually	FLHSMV	FLHSMV registered for the 2020 Workshop & Law Institute AAMVA conference in Orlando on March 18-19, but it has been cancelled due to the COVID-19 emergency.  FLHSMV is working to onboard to AAMVA's State2State platform in 2021, which will allow for more accurate driver records.

**Strategy 7.4:** Improve accuracy of the **Vehicle Data System** by expanding use of Vehicle Identification Number (VIN) decoding through the Florida

Real-Time Vehicle Information System (FRVIS) application and its remaining subsystems.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
7.4a	Request programming plan to implement VIN decoding throughout remaining motor vehicle applications	Percent of VINs successfully validated with VIN checking software	Annually	FLHSMV	FLHSMV has not implemented VIN decoding in FRVIS. This enhancement should be implemented by Spring 2021. This technology is already implemented in the EFS system.  FY20 Update: The VIN decoding system will be augmented with a NHTSA VIN decoding system to ensure decoding accuracy. The augmented system will be implemented by Fall 2020.
7.4b	Route plan through the agency's governance process		Annually	FLHSMV	FLHSMV is unable to provide the percentage of vehicle records with no errors in critical data elements at this time.  FY20 Update: 90% of the VINs entered decoded successfully with the current VIN decoding software. The errors occurred when trying to decode brand new (2020) vehicles, since the manufactures delayed sending the vehicle information to the decoding system provider. FLHSMV has begun documentation gathering for FRVIS modernization project (6-7 Year project).

### **Strategy 7.5:** Improve accuracy of the **EMS System** by monitoring previously implemented data quality measures.

Action	Description	Performance Measure	Timeline	Leader	Notes
Step 7.5a	Monitor measurements for error in critical data	Number of measures	Quarterly	FDOH	Data quality measures consistent with State EMS Strategic
	elements quarterly	implemented			Plan are being monitored on a quarterly basis.
					FY19- 89% of agencies are reporting with valid data from the 5 data categories.
					FY20- 97% Emergency runs in EMSTARS; 90% of agencies are reporting with valid data from the 5 NEMSIS data categories.

### **Strategy 7.6:** Improve accuracy of the **Trauma System** by updating business rule validations on edit checks.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
7.6a	Improve accuracy by developing quality performance errors for Trauma data		Quarterly	FDOH	Utilizing the NEMSIS Data Quality Reports to track national measures.
7.6b	Develop accuracy performance measures	Number of performance measures established	Quarterly	FDOH	Implemented 5 data quality categories to measure: Patient Information; Cardiac Arrest; Valid System Times; Cause of Injury; Clinical Times Recorded

**Strategy 7.7:** Improve accuracy of the **Citation/Adjudication System** by reducing errors by 3 percent per year.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
7.7a	Develop an analytical approach (scorecard) that identifies the root cause of the common errors discovered and reasons for inaccurate citation reporting  Establish a baseline for UTC accuracy  Maintain training on how to complete the UTC  Review Clerk of Court (COC) case management software system  Disseminate conclusions by conducting COCs trainings to reduce error rates by 3 percent each year.	Improve accuracy of citation reports from previous FY baseline data	January 2018 (Complete) Annually Annually September 2020 September 2020 Annually	FLHSMV	FY19 Project: FLHSMV to conducted 8 regional crash and 6 UTC report trainings to further educate LEAs and COC on what constitutes as an accurate and complete reporting. Improvement Goal 99.51%; Actual Performance 98.60%; 4 COC case management software systems reviewed. UTC Completeness baseline was established on 01/05/2018  FY20 Project: FLHSMV to conduct 4 stakeholder meetings for crash report revision feedback, conduct 4 train-the-trainer UTC workshops w/Clerks, review at least 4 COC case management systems, increase completeness/accuracy of citation reporting by 3%. All UTC workshop locations have been identified. There is a total of 6 UTC trainings and 6 case management systems reviews scheduled - TBD due to Covid-19

# Objective 8: Improve uniformity of traffic records systems by December 2021.

**Strategy 8.1:** Improve uniformity of the **Crash Data System** by continuing to comply with MMUCC Standard and Compliance.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
8.1a	Continue review of FLHSMV processes and MMUCC Standards to ensure consistency and uniformity  Perform an analysis on stance of new MMUCC Standards to create baselines on a National Standard.  Create an implementation plan for MMUCC Compliance  Develop a crash report control Document, based on the most recent MMUCC version, which would serve as a reference resource for the new crash report and the associated database changes, including XSD definitions and report layout.	Crash Report comparison to National MMUCC standards  Number of Crash Report Control Documents developed	December 2021 September 2020	FLHSMV	MMUCC goal: 90% compliant MMUCC standards analysis completed in 2018. Uniformity baseline established in December 2017. Request grant funding to review manual and add MMUCC definitions by Sept. 2018. FY20 Project- Crash & UTC Data Improvement Objective-control document
8.1b	Develop and maintain an online crash manual that is relevant with current practices, policies and procedures	Online crash manual developed	Annually	FLHSMV	Online crash report manual completed and published on 2/5/19
8.1c	Develop a centralized crash locating database by creating tools in S4 Analytics for the FDOT Crash Analysis Reporting (CAR) System analysts to manually verify all crash reports (meeting FDOT requirements).	Tools Developed	September 2021	UNF FDOT FLHSMV	FY20 Project Approved: Geolocation-Based Crash Diagramming & FDOT Crash Mapping to Improve Crash Location Timeliness and Quality

**Strategy 8.2:** Improve uniformity of the **Roadway Data System** by working with internal FDOT offices and local governments.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
8.2a	Monitor the process on updating Data Inventory Applications IRAIS to improve uniformity and integration	TBD	June 2019	FDOT	FDOT is coordinating internally to expand the collection of RCI data to local roads IRAIS IRAIS implementation services to replace the RCI application and database. Tentative award date is June 2019.
8.2b	Provide a modified process of data collection methods and adding the MIRE Fundamental Data Elements to be collected	Methods and techniques implemented	Ongoing	FDOT CIM	FDOT currently reviewing data collection methods and techniques
8.2c	GIS will provide uniform data in LRS format  • Evaluate potential basemap considerations	Testing results shared; Prototype finalized	June 2019	FDOT	FDOT working with vendor to provide and test new tools

**Strategy 8.3:** Improve uniformity of **Driver Records System** by focusing on driver record data fields not electronically provided via TCATS.

Action	Description	Performance Measure	Timeline	Leader	Notes
Step					
8.3a	Review TCATS data collection and submission process and target specific data elements for improvement for the new ICD 7.0.		September 2018/2019	FLHSMV	FY20 Crash and UTC Data Improvement project to focus on improving completeness/accuracy of crash and citation reporting.
			August 2023		FLHSMV has met with the Florida Court Clerks and Comptrollers and the list of data elements for improvement is up to date.  These fields will be considered in the Citation Inventory Phase II project rewrite of systems (August 2023)
8.3b	Compare targeted fields with data record requirements		September 2018/2019	FLHSMV	FY21 Driver Data Improvement project- funding to target data elements for improvement.
8.3c	Establish common rules for data elements (i.e. Naming conventions, address, zip code, etc.)		December 2021	FLHSMV	Modernization project will create uniformity by creating common rules.

**Strategy 8.4:** Improve uniformity of the **Vehicle Data System** by completing a data reconciliation/synchronization project with the American Association of Motor Vehicle Administrators (AAMVA) and the National Motor Vehicle Title Information System (NMVTIS) to ensure a uniform data exchange between the two entities.

Action	Description	Performance Measure	Timeline	Leader	Notes
Step					
8.4a	Conduct a comparison and correction (data synchronization) to ensure the data Florida provides is accurate, reliable, and complies with NMVTIS uniform titling standards that will aid in preventing the processing of stolen vehicles in other states  • Engage in a project with the American Association of Motor Vehicle Administrators (AAMVA) to synchronize our data with NMVTIS  • Initiate one to one file comparison to determine the root cause of any data discrepancies and correct the data  • Ensure an analysis/comparison of Florida's active and cancelled title records	The percentage of NMVTIS standards- compliant data elements in the Vehicle Data System	Annually	FLHSMV	The NMVTIS project has produced the following improvements: Identified the primary reason sending duplicate VIN's. The issue was corrected, and we have seen a significant drop in the number of duplicate records being reported to NMVTIS. Reviewing a daily report and removing duplicate records from NMVTIS when applicable. (manual process) Received AAMVA tool (SWI) to correct current / older records.  System updates most current title records based on files received from AAMVA (based on states that supply data to AAMVA).

**Strategy 8.5:** Improve uniformity of the *EMS System* by transitioning agencies to most current NEMSIS compliance standard.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
8.5a	Maintain data dictionary in compliance with current NEMSIS standards	Percent of EMS runs that are NEMSIS compliant	Annually	FDOH	FY20 Project: 97% (FY19: 90%) of EMS emergency run reports in Florida are submitted to the state in a NEMSIS format. The state is in transition to the most current NEMSIS standard. Of the current 210 (FY19: 203) agencies submitting, 90% (FY19: 66%) are submitting in V3. Florida remains the largest V3 submitting state to NEMSIS
8.5b	Implement training on current data dictionary standards	Number of trainings conducted	Annually	FDOH	Anticipate formal adoptions of Florida V3.5 data dictionary in July 2020 Anticipate training on V3.5 to begin August 2020 and continue on a quarterly basis Continuing quarterly EMSAC BioSpatial Training
8.5c	Track the percent of EMS runs that are in compliance with the current standard				

### Objective 9: Improve timeliness of traffic records systems by December 2021.

**Strategy 9.1:** Improve timeliness of the **Crash Data System** by increasing the number of crash reports received within 10 days.

Action	Description	Performance Measure	Timeline	Leader	Notes
Step					
9.1a	Develop outreach program and provide training with LEAs to increase their interest in electronic submissions	Number of training classes with LEAs conducted	Annually	FLHSMV	FY19 Project: FLHSMV conducted 8 crash and 6 UTC report training events (2019) to encourage timeliness  FY19 Project: FLHSMV created and distributed Accuracy, Completeness and Timeliness scorecards covering the 3 <sup>rd</sup> quarter of 2019 (July, August and September) to LEAs. Timeliness was added to this project and these reports will be distributed quarterly
9.1b	Decrease time from crash date to date of crash submission by scan and data entry process by 5 percent annually	Percent of crash reports submitted electronically (baseline is 60 percent; target – 10% increase yearly); Percentage of crash records aged more than 10 days	Annually	FLHSMV	313 agencies are submitting crash reports electronically <b>Baseline Period</b> (4/1/18-3/31/19): 574,867 of 722,161 (79.6%) submitted w/in 10 days <b>Current Period</b> (4/1/19-3/31/20): 571,377 of 708,710 (80.62%) submitted w/in 10 days

#### **Strategy 9.2:** Improve timeliness of the **Roadway Data System**.

Action	Description	Performance Measure	Timeline	Leader	Notes
Step					
9.2a	Perform a Quality Assurance Review Program for all Districts within 2 years	Number of District reviews conducted	Quarterly	FDOT	Natural Disaster and Travel ban impacted schedule (only 2 field visits conducted) but in office review was conducted
9.2b	Perform District Quality Evaluations to ensure Districts are meeting deadlines (RCI, HPMS, RITA, SLDs, Key Sheets, etc.)	Number of Evaluations completed	Biannually	FDOT	Completed all periods- Ongoing

**Strategy 9.3:** Improve timeliness of the **Driver Records System** by measuring both the internal and external average of the length of time between the occurrence of adverse action by a driver and the time it takes for that information to appear in the DHSMV database.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
9.3a	Reduce the average time required for disposition information to be added to the driver record  Establish a baseline for the length of time it takes an adverse action by a driver to be entered into the DHSMV database (external measure)  Establish a baseline for the length of time it takes for disposition information to be added to the driver record (internal measure)	Average number of days from the date of a driver's adverse action to the date the adverse action is entered into the database (target – 2% reduction per year); Average number of days from the date of citation disposition notification by the driver repository to the date the disposition report is entered into the database	Annually	FLHSMV	Requested grant to work on improving TCATS submissions September 2018/2019.  Citation Inventory System will be included in the department's Motorist Modernization Phase II re-write of our systems.  2018 eCitation electronic submissions is 91.4% received electronically an increase of 3% from 2017.  2019 eCitation electronic submissions is 93.7% received electronically an increase of 2.3% from 2018.  UTC has a timeliness report for dispositions which can be ran statewide or by county.

**Strategy 9.4:** Improve timeliness of the **Citation/Adjudication System** by reducing the time between citation issuance and disposition.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
9.4a	Establish a baseline for timeliness			FLHSMV/ Clerks	UTC has a timeliness report for dispositions which can be ran statewide or by county.
9.4b	Increase the number of Clerk of Courts submitting citations electronically	Number of Clerks submitting electronically		FLHSMV/ Clerks	FY19- 31 COCs did not accept E-Citation processing and 322 Law Enforcement Agencies were using E-Citations  FY20- As of March 2020, 5 COCs do not accept E- Citation processing  All 67 clerks submit electronically to FCCC.  There are 326 Law Enforcement agencies using E-Citations.
9.4c	Identify counties/agencies with longer average processing times between the issuance of a citation and the disposition; work with these counties/agencies to reduce average processing time	Average number of days between citation issuance and disposition		Clerks	The department is reviewing Citation Inventory, to identify the citation offenses received and the department has not received a disposition within 365 days. This data is sent to the individual clerks to review and advise the status of each citation identified. If a disposition has been rendered the clerk notifies the department of their research. Any disposition we do not have in the system are transmitted to the department through the TCATS system.
9.4d	Continue education efforts on the benefits of electronic data submission to the Clerks			FLHSMV/ Clerks	FY19: FLHSMV to conduct 8 crash and 6 UTC report training events to encourage electronic reporting.  FY20: FLHSMV to conduct 5 UTC training events and 7 case management reviews to encourage electronic reporting.

Florida Traffic Safety Information System Strategic Plan

9.4e	Continue outreach program with Law Enforcement Agencies to increase their interest in and awareness of	Number of LEAs educated on e-citation	FLHSMV	44 law enforcement agencies (LEA) have been identified for using paper citations only. An email has been sent to the
	e-citation programs	programs		directors, chiefs and Sheriffs over these agencies. The
				email explains the reasons to go with electronic submission. We are requesting to know when their agency plans to move
				towards electronic submission and provided the approved
				eCitation vendors list for their review. The department's goal
				is to be 100% electronic. We are waiting to hear back from the agencies with their response.
				11 responses were received back from the contacted LEAs,
				and the results are as follows:  Zero anticipated less than 6 months (0%)
				Five anticipated 6 months -1year (46%)
				Three anticipated 1-2 years (27%)
				One anticipated more than 2 years (9%) One stated only if it is made mandatory and the other
				agency was dissolved. (18%)

# **Strategy 9.5:** Improve timeliness of the **EMS System** by continuing to monitor timeliness of submission indicators.

Action Step	Description	Performance Measure	Timeline	Leader	Notes	
9.5a	Continue to define timeliness measures and monitor quarterly	Percent of EMS run reports sent within 1 day.	Quarterly	FDOH	FY19: 51.85% 13.74 19.06 15.34	0-1 day 2-7 days 8-30 days GT 30 days
					<b>FY20:</b> 51.58 % 11.5 % 9 % 26.9 %	0-1 day (within 24hrs) 2-7 days 8-30 days GT 30 days

# **Strategy 9.6:** Improve timeliness of the **Trauma System** by establishing timeliness performance measure.

	g,						
Action	Description	Performance Measure	Timeline	Leader	Notes		
Step							
9.6a	Establish timeliness performance measures	Performance measures established	December 2018	FDOH			
		established	2010				

# **GOAL 3: Provide the ability to link traffic records data.**

## Objective 10: Understand the needs of end users that require linked data by December 2021.

**Strategy 10.1:** Convene Special Projects (E.g. NHTSA Go Team) to identify traffic records users/uses, contributors, linkages, and duplications of crash data systems.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
10.1a	Establish user needs by conducting crash data survey, research studies, assessments, etc.	Survey conducted		TRCC stakeholders	Go Team Phase II User Survey conducted 10/17/2018- 10/28/2018. Results presented at 12/7/2018 TRCC Meeting. Go Team draft final report received April 1, 2019.  NH Final Report (1/31/2020) conducted GAP Analysis on CAR vs S4 Location Capabilities to unify crash location verification in S4. Go Team and NH recommendations addressed in projects below:  FY20: Geolocation-Based Crash Diagramming and FDOT Crash Mapping to Improve Crash Location Timeliness and Quality  FY20: Central Crash Data Repository and Improved Crash Data (update FLHSMV central repository intake process to accept crash diagram aerial photography for safety analysis)
10.1b	Create a framework for all system user needs based on findings of survey, research, assessments, etc.	Develop a framework for all systems		Data System Owners/ Data Subcommitt ee	Framework Implementation began in NH Project. Expansion of context diagrams to continue in future project- Cloud Feasibility Study (pending).
10.1c	Form a subcommittee of data system representatives	Committee established representing data system owners		TRCC Executive Board	Go Team/Data Subcommittee established. Continued efforts on "Special Projects" such as NH FDOT CAR/S4 (Dec. 2019-Jan. 2020) Future Projects (pending):  • Florida Crash LBR and Cost Analysis  • Florida Cloud-Based Traffic Safety Information System (Phase I)- aka "Cloud Feasibility Study"

# Objective 11: Define the framework by Identifying key data fields needed to facilitate linking traffic records information systems by December 2021.

**Strategy 11.1:** Identify key data fields which should exist in all traffic records information systems.

	7 11.1: Identify key data fleias which should exis			1	Maria
Action	Description	Performance Measure	Timeline	Leader	Notes
Step					
11.1a	Data Subcommittee (from Action 10.1c) will identify:	Key data fields identified	December	Data	Received Go Team Phase II funding to explore linkage
	<ul> <li>Key data fields which will be linked among the</li> </ul>		2021	Subcommittee	possibilities.
	data systems,			TRCC	Go Team II draft final report received April 1, 2019.
	<ul> <li>Name for each key data field which will be used</li> </ul>			Coordinator	NILLOADIOAD : III III III III III III III III III
	across the data systems, and				NH CAR/S4 Project began documentation of Crash Business
	<ul> <li>Definition for each key data field which will be</li> </ul>				Models (current/future state) to map Florida's Crash
	used across the data systems				System's physical and logical data flow to identify linkage
					and data improvement opportunities; GAP Analysis on CAR/S4 demonstrated benefits gained with the consolidation
					of location processes in a central database;
					(Final report provided 1/31/2020)
					(Timal Topolit provided 176 172020)
					FY21 Project Signal Four Analytics- to focus on data linkage
					opportunities between EMS/Crash/Citation/Roadway data
					(pending approval).
					,
11.1b	Progress update will be provided at quarterly TRCC	Progress reports	Quarterly	TRCC	Results presented at 12/7/2018 and 4/5/2019 TRCC
	meetings	provided		Coordinator	Meeting: Go Team Phase II final report and survey results.
					Executive Board updated at April 3, 2020 TRCC meeting on
					the following:
					NH Final Report-FDOT CAR/S4 Project
					FY21: Florida Cloud-Based Traffic Safety Information
					System (Phase I) - aka "Cloud Feasibility Study"
					(pending)
					FY21: FDOH NEMSIS and UF S4 Teams to focus EMS
					data integration and linkage (data
					exchange/linkage/integration) (pending)

# Objective 12: Expand integration of Traffic Records (TR) projects to maintain a uniform data collection platform across key data fields needed to facilitate linking traffic records information systems by December 2021.

**Strategy 12.1:** Continue to support and increase Law Enforcement Agency (LEA) utilization of TR data collection systems/tools and S4 Analytics by

providing the integration of Traffic Records Projects: Systems and/or Software.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
12.1a	Track the utilization of traffic records systems/software for the following TR projects:  Tracs (Traffic and Criminal Software)  ELVIS (Electronic License and Vehicle Information System)  Signal Four Analytics' Geo-Location Tool  National Emergency Medical Services Tracking and Reporting System Version 3 standards	Number of users/agencies	Quarterly	Project Leads	FY20: TraCS- 19,578 users / 179 LEAs ELVIS- 18,975 users / 197 LEAs S4's Geo-Location Tool - Crash Reporting: 167 (TraCS) LEAs - Citation Reporting: 115 (TraCS) LEAs S4 Analytics- 4,268 users / 850 agencies and vendors NEMSIS V3- 194 EMS Agencies
12.1b	Improve key data field collection across traffic records reporting:  By integration S4's Geo-location Tool w/TraCS crash and citation reporting  By integrating ELVIS with TraCS	Number of incidents  Number of agencies	Quarterly	Project Leads	FY20: Geo-Location Tool usage: - 103,713 crash reports - 72,887 citation reports - 21,976 traffic warnings - 4,319 tow sheets - 1,212 DUI Citations - 568 Parking Citation - 329 Field Interview Report - 226 Offense Incident Report - 61 Boating Warning - 45 Boating Citation  FY20: ELVIS Usage: Total LEAs 197; 70% of TraCS agencies are using ELVIS

# **GOAL 4: Facilitate access to traffic records data.**

# Objective 13: Identify high priority user needs and develop a strategy to improve accessibility by December 2021.

**Strategy 13.1:** Convene Special Projects (E.g. NHTSA Go Team) to conduct needs assessment for Crash Data Systems.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
13.1a	Identify agency to lead needs assessment	Needs assessment conducted (survey)	December 2021	FDOT FLHSMV	Applied for Go Team Phase II funding to explore linkage possibilities Survey conducted 10/17/2018-10/28/2018. Results presented at 12/7/2018 TRCC Meeting.
13.1b	Create a framework based on survey results	Final assessment report delivered to TRCC Executive Board	December 2021	FDOT FLHSMV	Results presented at 12/7/2018 and 4/5/2019 TRCC Meeting: Go Team Phase II final report and survey results.  TRCC Meeting on April 3, 2020 presented NH Final Report
13.1c	Apply framework to Signal Four Analytics	Develop framework for all system needs	December 2021	FDOT FLHSMV FDOH UF	<ul> <li>Executive Board updated at April 3, 2020 TRCC meeting on the following:         <ul> <li>NH CAR/S4 Project began documentation of Crash Business Models (current/future state) GAP Analysis: CAR/S4 (Final report provided 1/31/2020) consolidate 2 CAR System functions (location and analytics) within S4 Analytics</li> <li>FY21 Project: Signal Four Analytics- to focus on data linkage opportunities w/EMS/Crash/Citation/Roadway data (pending approval)</li> <li>FY21: Florida Cloud-Based Traffic Safety Information System (Phase I)- aka "Cloud Feasibility Study" (pending approval)</li> </ul> </li> </ul>

# Objective 14: Improve accessibility to data for all systems by December 2021

**Strategy 14.1:** Increase public record data availability through online access.

Action	Description	Performance Measure	Timeline	Leader	Notes
Step					
14.1a	Assist agencies with public facing websites to make data available through online access	Number of users accessing traffic records data	December 2021	Executive Board/Data System Owners	<ul> <li>FY20: S4 Analytics currently provides linkage between crash, citation, and roadway data. Analytical reports available daily but there is no public facing portal at this time.         Total users: 4,268             Total agencies and vendors: 850     </li> <li>FY21 Project: Signal Four Analytics- to focus on data linkage opportunities w/EMS/Crash/Citation/Roadway data to enhance safety analysis (pending approval).</li> </ul>
14.1b	Provide access to real-time summary data reports	Number of users accessing real-time summary data reports	December 2021	Executive Board/Data System Owners	See notes above;
14.1c	Implement web development standards to make data accessible as public data based on needs assessment	User satisfaction with (a) the quality of traffic records data, and (b) their ability to obtain the data when, where, and in the form needed.	December 2021	Executive Board/Data System Owners	See notes above;
14.1d	Provide federal, state, and local agencies with access to the linkable data among traffic safety information system databases		December 2021	Executive Board/Data System Owners	<ul> <li>FY20: S4 Analytics currently provides linkage between crash, citation, and roadway data. Analytical reports available daily but currently no public facing portal.</li> <li>FY21 Project: Signal Four Analytics- to focus on data linkage opportunities w/EMS/Crash/Citation/Roadway data (pending approval).</li> <li>FY21: Florida Cloud-Based Traffic Safety Information System (Phase I) - aka "Cloud Feasibility Study" (pending approval)</li> </ul>

# **GOAL 5: Promote the use of traffic records data.**

# Objective 15: Promote the understanding and use of available data.

Strategy 15.1: Increase users understanding of what is available and its use/importance (systems, grant funding, etc.) by December 2021.

Action	Description	Performance Measure	Timeline	Leader	Notes
Step					
15.1a	Maintain a metadata resource that describes available		Ongoing	TRCC	
	data and how it can be accessed			Coordinator	
15.1b	Post metadata resource on respective agency websites	Publish on TRCC	Ongoing	TRCC	Information published on TRCC website
		Website		Coordinator	

Strategy 15.2: Educate users on what systems are available and how to use them by December 2021.

Action	Description	Performance Measure	Timeline	Leader	Notes
Step					
15.2a	Conduct user training	Number of training sessions, type, frequency, online tutorials, PowerPoints	Annually	Project Leads	The following trainings were conducted:  Crash and UTC Data Improvement: FY19: FLHSMV conducted 8 crash and 6 UTC trainings on the following dates: Crash- 4/2/19, 4/24/19, 4/25/19, 5/15/19, 5/29/19, 6/11/2019, 6/12/19, 6/25/19; UTC- 4/2/19, 4/25/19, 5/29/19, 6/11/19, 6/12/19, 6/25/19 FY20 Crash and UTC dates: Crash-4/8/20, 4/15/20, 4/22/20, 4/29/20 UTC-5/5/20, 5/6/20, 5/19/20, 5/20/20, 5/21/20, 6/8/2020, 6/9/20, 6/10/20, 6/11/20. These dates will be modified due to COVID-19.  TraCS: FY19: 6 user trainings on the following dates: 5/2/19, 5/8/19 (2 trainings), 5/16/19, 5/21/19, 6/12/19 FY20: 13 user trainings: 10/2/19; 10/17/19; 10/23/19 (2 trainings); 11/7/19; 11/15/19; 11/20/19; 12/5/19 and 12/6/19 (1 training); 12/6/19; 1/9/20; 2/7/20; 2/19/20; 3/4/20  Signal 4 and Geo-location: FY19: 1/8/2019 (3 sessions), 1/9/2019 (3 sessions) FY20 S4- 11/5/2019- Ninth International Visualization in Transportation Symposium  FDOH NEMSIS Compliance: FY19: EMSAC BioSpatial Training: 1/22/19 EMSAC Data Committee: 1/22/19; 4/22/19; 7/16/19 FY20: EMSAC BioSpatial Training: 3/3/20, 6/10/20 EMSAC Data Committee: 3/3/2020, 6/10/20  ELVIS FY20: 15 remote trainings; 10 in-person: 11/13/19; 11/15/19; 12/16/19; 12/17/19; 12/27/19;1/2/20; 1/31/20 (2 trainings) 2/7/20 (2 trainings); 5 demonstrations.

# **Strategy 15.3:** Monitor utilization of traffic records data by December 2021.

Action Step	Description	Performance Measure	Timeline	Leader	Notes
15.3a	Monitor utilization of traffic records data		Annually	Data System Owners	
15.3b	Monitor utilization of web-based system		Annually	Data System Owners	
15.3c	Report utilization results by month at quarterly TRCC meetings	Reports provided	Annually	Data System Owners
