

2018 Update of Tables and Figures

August 2019

FLORIDA SEAPORT SYSTEM PLAN 2018 UPDATE OF TABLES AND FIGURES

INTRODUCTION

This document provides an update to the majority of data tables and figures provided in the Florida Department of Transportation's (FDOT) *2015 Florida Seaport System Plan*. The annual updating of seaport system plan data allows FDOT to: implement the plan using the latest industry metrics; provide analysis of long-term trends; and, provide a foundation for future five-year plan updates. The information collected for this update are the 2018 seaport metrics including the number of containers in twenty-foot equivalent units (TEUs), cargo tonnages, total number of revenue cruise passengers, and several other items. The primary source of the data is the individual Florida Seaports and the Florida Seaport Five-Year Mission Plans. In addition, some of the data comes from official government sources. Maintaining this data on an annual basis will lay the foundation of information necessary for the 2020 Florida Seaport Plan to build upon.

The purpose statement and vision of the 2015 plan are restated below. The updated Figures and Tables follow. It should be noted, not all tables and figures in the 2015 plan were updated as: some data sources are not updated annually; some source data has not been updated; or, the 2015 data is still up to date.

STATEMENT OF PURPOSE

This 2015 Florida Seaport System Plan was prepared in accordance with the statutory requirements of Section 311.14(1), Florida Statutes (F.S.). The development of this plan, along with other modal plans developed under the Freight, Logistics, and Passenger Operations (FLP) Office at the Florida Department of Transportation (FDOT), provides the Department with a cohesive planning process for all the modal offices. Highlights of this plan and the Florida Waterways System Plan are presented in an Executive Summary, illustrating the seaport and waterways conditions, challenges, trends, visions, goals, and areas of focus for the FDOT Seaport and Waterways Office. This plan also provides a look back at the history of the Florida Seaport System and insight into the economic contribution and partnerships which have spurred the dynamic growth of seaport development, waterborne commerce, international trade and the cruise industry in Florida.

VISION OF THE FLORIDA SEAPORT AND WATERWAY SYSTEM

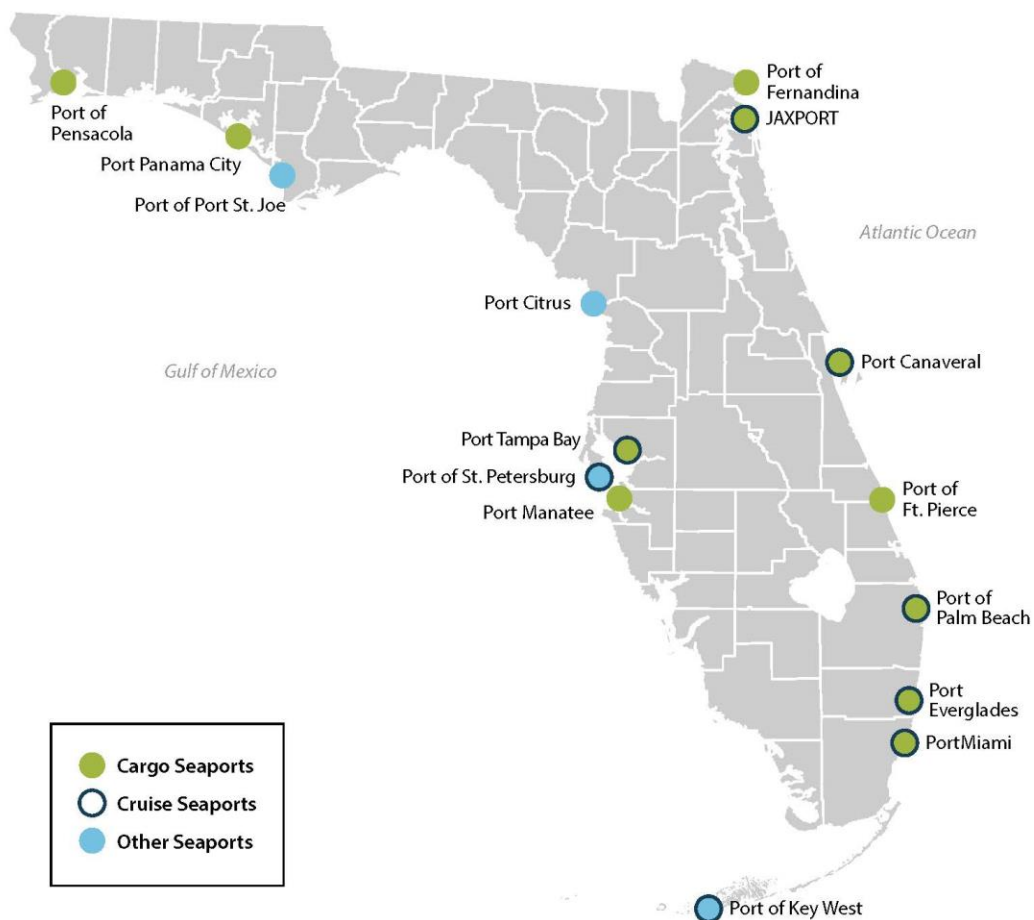

Florida is a Global Gateway. Florida provides world-class facilities and services to enhance domestic and international trade and tourism through partnered investments in waterways, seaport facilities, and intermodal transportation networks. These infrastructure improvements lead to public and private sector investments, new and continued partnerships, job growth and increased efficiency, productivity, and prosperity.

Florida’s cruise ports continually strengthen and expand their leadership role as the largest passenger cruise market in the world. Florida’s container ports consistently increase their share of Florida goods moving through competing trade routes. Florida’s seaports grow as efficient and attractive global gateways for passengers and freight. Furthermore, Florida’s waterways, seaport system, and intermodal network continue to attract large-scale manufacturing and logistics services, as well as marine commercial and recreational activities to further strengthen and diversify Florida’s economy.

THE FLORIDA SEAPORT SYSTEM TODAY

Florida is home to more than 21.3 million residents and they share the state’s resources with over 126.981million visitors in 2018.¹ Continuing to provide the goods, services, and jobs required to sustain this growth and plan for the future presents a tremendous challenge for state leaders, businesses, and communities. Florida’s 15 public seaports, shown below in Figure 1-1, are recognized as significant contributors to the dynamic growth of the state’s economy and as facilitators of the movement of goods and cruise passengers.
