Comments:

What happens if the plan quantity is larger than the quantity accepted?
Does the specification imply that we always pay the plan quantity?

Response by Dennis Barber for David Chason:

1) This item will fall under the plan quantity concept and will have to meet the following criteria.

The quantity if in error will only change if it is more than 5% or more than \$5000.00 either/or. Any field revisions will be added to or deducted from plan quantity.

Response

2) No we will not always pay plan quantity if it meets the above criteria for response No. 1.
