Edwin A. Petersen, Jr.

COMMENTS:

I have performed a review for the above referenced subject; based on my review I have the following comments.

1. Since the reflectivity requirements are being increased, will requirements for adhesion of RPM's be increased? It seems a lot of RPM's break loose from the roadways within the original 12 months. This being the case, the reflectivity would seem minimal if a large percentage of RPM's are lost.
2. Due to this new requirement, what affect will it have on the few types of RPM's that are on the Qualified Products List (QPL).

COMMENTS:

This change needs to be coordinated with product evaluation. Has there been a study to determine if any manufacturers can meet this new requirement? Will retesting of all manufacturers be required?
