Comments

Without knowing the background for this proposed change, this specification, 8-4.1 Night Work, seems to be omitting several key issues.

- 1) Equipping all vehicles with flashing lights...
- 2) Ensure all personnel wear reflective vests...
- 3) Have a certified worksite supervisor on site during nighttime operations...

These are issues where we constantly seem to have problems with Contractors, throughout our operations; Permits, Construction, and Maintenance Contracts. This may be an area where re-emphasis is appropriate.

I would recommend we not delete these items.

Response

We are not deleting these requirements we are moving them to Section 102, Maintenance of Traffic where they are more appropriately located in the specifications.
