Comments: – Suggest going back to the actual URL. I looked for the list department approved courses and providers on the State Materials Office Website and couldn't find it.

Response: Thanks for the comment. The web address has been deleted because there might be possibility of the web address changes in future. The problem would be when web address changes and the change is not made in the specification.

The following are the steps to find the List of the training providers on the State Materials Office's website:

1. Go to the State Materials Office website.
2. On the left column click on the Meetings/Training
3. On the Meetings and Training Site go to the Training Information and then click on the Structural Personnel Training/Certifications. This will take you to the site where the providers and their training courses are listed for each of the precast concrete products.

Dan Hurtado

Comments: General:"The list of the Department approved courses and their accredited providers IS available on the State Materials Office website...." should read, "...ARE available on the...."

Response: Thanks for the response. The providers and their courses are included in one list. Since the subject "List" is singular, the auxiliary verb "is" is used in lieu of "are".

Comments: Tonii Brush of D5 Construction: "PCI Quality Control Technician/Inspector Level II certification." =Comment: What is PCI?

Response: Thanks for the comment. PCI is the acronym for the Precast/Prestressed Concrete Institute. We will add the definition of the acronym in the last sentence of 105-8.11.2.1 to read: ".....and CTQP Concrete Field Technician level I certification or Precast/Prestressed Concrete Institute (PCI) Quality Control Technician/Inspector Level II certification".

Ghulam Mujtaba

Comments: I reviewed the formatted specification 105-8.11, dated August 28, 2009, and recommend the following editorial changes:

1. 105-8.11.2.1 Fifth line: Delete "of" to read "For Incidental Precast Concrete....."
2. 105-8.11.2.1 Seventh line: Change "105-8.11.1.4.1" to "105-8.11.2.4.1....."
3. 105-8.11.2.2 Third line: Delete "of" to read "For Incidental Precast Concrete....."

Response: The recommended changes have already been made.
