Comment: (4-13-10) The proposed language seems a little awkward – maybe consider:
“**105-8.6.2 Paving Technicians:** For paving operations, keep a qualified CTQP Asphalt Paving Level II technician on the roadway at all times when placing asphalt mix for the Department, and perform all testing with a CTQP Asphalt Paving Level I technician. As an exception, measurements of cross-slope, temperature and yield (spread rate), *as well as the inspection of the placement of miscellaneous asphalt* can be performed by someone under the supervision of a CTQP Paving Level II technician.”

Response:
