

7000205 Highway Signing
COMMENTS FROM INTERNAL/INDUSTRY REVIEW

Comments: (12-12-11) The first paragraph and subsection 'a' describe the sheeting as 'types', but subsection 'b' uses the descriptive definition instead of the 'type'. Suggest using 'type' in all circumstances.

Comments: (12-15-11) There is no reference in 994-1.2 (7-10) to the ASTM D-4956 Type XI sheeting. Up to now, this sheeting has only been included within our Type VII(Special)sheeting category. As to the legends for overhead signs shall use only microprismatic sheeting, a more definitive definition needs to be given. If the intention is to exclude a beaded type of sheeting product, why not just say that. The QPL currently does not make that differentiation for Type 3 sheeting.

Comments: (12-20-11) *In the last line it reads “Mesh signs shall meet the color, daytime luminance and nonreflective property requirements of Section 994, Type VI. “ , as I understand it Type VI is not a mesh material and does have some reflective properties, therefore this should not work.*
