Comments: (12-22-11)

We agree with the reasoning for the proposed changes but not as to the way they are addressed.

1. In 780-2 where we list other spec.'s outside of 780, we need to add 620 and 639 for consistency; i.e. we already mention 603, 608, and 611

Response:

2. Under 620, in the description, add ITS devices, since the description for this work is limited to signals.

In Section 780, 780-6 (Electrical Power Service Assemblies), 780-7 (Method of Measurement) and 780-8 (Basis of Payment) has been removed from the specification.

Question? Who will be responsible for furnishing and install electrical power (solar if called out)?

Response:

780-6

Specifications 780 7 and 780 8: How will this item be paid for, even if it is lump sum you see under Basis of Payment a lump sum pay item.

Response:
