**337-7.5.1 Air Temperature at Laydown:**

“Meet the requirements of Table 330-1”. When looking in 330, Section 330 directs the reader to 337 for the temperature, so this information is missing in both sections.

Response:

Response: Table 330-1 contains all of the temperature requirements for dense graded mixtures. Table 330-1 was updated for this round of specification changes. For "FC-5" mixtures, 330-3.2.2 refers the reader back to 337-7, which is still correct (see 337-7.3 for specifics).

For the next workbook, all temperature information (including FC-5) will be contained in Table 330-1.

No change made at this time.
