Comment: (11-7-11)
While only Item (f) has been modified, the wording in Items (d) and (f) appear to be a bit unclear.
1. 5-1.4.2 Item (d): In my opinion, Item (d) has too many "ands" in it.
Recommend modifying it to read, "Non-standard lighting, as well as, the structures and components for signing and signalization."

Response: The language applies to non-standard lighting, non-standard signalization and non-standard signing structures and components for each of the three. For clarity, the language has been changed as follows:

> (d) Non-standard *structures and components for drainage,* lighting, signalization and signing ~~structures and components~~
> (e) Building structures
> (f) *Non-standard* ~~D~~*d*rainage[dt1] ~~structures,~~ *crash cushions* and other nonstructural items

2. 5-1.4.2 Item (d): Does the term "Non-standard" apply to just "lighting" or also to the "signing and signalization". Regardless, does the current wording differentiate this correctly or is a modification needed?

Response: See response to #1 above.

3. 5-1.4.2 Item (f): Same comment regarding the term "Non-standard". Does it apply to just "drainage structures" or does it also apply to, "attenuators and other nonstructural items"? Regardless, does the current wording differentiate this correctly or is a modification needed?

Response: See response to #1 above.

This is an excellent improvement to the specification.

Response: Thank you!

Comment: (12-6-12)

In reference to the revisions to Section 5-1.4.2. Wouldn't it be better to combine all the non-standard structures, (i.e. "(d) Non-standard structures and components for drainage, lighting, signalization and signing." I believe (f) could possibly be deleted.

Response: Please see response to Rich Hewett comment above.
