

6080000 MANUFACTURERS' WARRANTIES FOR TRAFFIC CONTROL SIGNALS AND
DEVICES

Central Office needs to remember that the Department does not actually maintain any traffic signal equipment. We local maintaining agencies do this. This change means FDOT District Traffic Operations or Construction offices will be responsible for handling all local maintaining agency warranty claims for traffic control equipment. Is the Department prepared to track every LED traffic signal insert, load switch, MMU, Ethernet switch, etc? Do local maintaining agencies send the defective devices to district office for repair or replacement or will you arrange to drop ship devices to and from the manufacturer? Will you develop an on-line system for the local maintaining agencies to file warranty claims or will we have to do this using paper forms.
