706-4 Application. "Install RPMs in accordance with Design Standards, Index Nos. 17345 and 17352. Place the RPMs with the reflective face perpendicular to a line parallel to the applicable roadway marking."
I don't think this sentence is necessary if you are to install RPM's in accordance with the Design Standards. (Comment from Matt Dewitt).

1. 706-4: Add "retro" to the following sentence: "Place the RPMs with the retroreflective face perpendicular to a line parallel to the applicable roadway marking."

Response:

2. 706-4: I couldn't find in the Design Standards or Specs where we provide a requirement for proper placement of the Bidirectional White/Red RPMs (i.e. Place white face toward the direction of travel). I don't think this is a major issue with contractors placing this type of RPM incorrectly, but I recommend we at least address it either in the spec or the Design Standards.
