

3270301 MILLING OF EXISTING ASPHALT PAVEMENT
COMMENTS FROM INTERNAL/INDUSTRY REVIEW

Before opening an area which has been milled to (accept temporary) traffic, sweep the pavement and gutters with a power broom or other approved equipment to remove, to the greatest extent practicable, fine material which will create dust under traffic. Sweep in a manner to minimize the potential for creation of a traffic hazard and to minimize air pollution. Do not sweep or allow milled asphalt into (drainage) inlets.

Response: I do not believe that adding the text “(drainage)” clarifies the spec in any way. I am not aware of any other types of inlets into which milled asphalt could be swept. I would say that we should prevent the sweeping of milled asphalt into all inlets, regardless of their function. No change made.

The specification should state milled areas replaced within 24 hours rather than day after.

Response: This comment is referring to a separate area of the spec that was not affected by the proposed change.

No change made.

I believe we should include a provision to collect and remove millings from the project with an approved process such as vac truck, otherwise the material will just be pushed off the road...

Response: The spec says that the pavement and gutters shall be swept to remove milled material. I don't think we want to dictate means and methods.

No change made.

Clarify 5th paragraph 2nd sentence. "Perform this operation on the same day as milling" (is it meant to positive drainage?)

Response: This comment is referring to a separate area of the spec that was not affected by the proposed change.

No change made.
