1. Is Short-Term Raised Rumble Strips something new that we are doing?

Response: Yes. The purpose is to replace existing raised rumble strips throughout construction.

2. When does the Contractor install them?

Response: Short-term raised rumble strip sets are for interim replacement between the time when existing raised rumble strip sets are removed for construction activities and the permanent raised rumble strips are installed. They must be installed prior to opening the road to traffic. Language will be added to the FDM in conjunction with this Spec revision to tell the designer to include short-term raised rumble strips in the TTC plans. Location information and pay item will be included in the plans.

3. How does he get paid?

Response: Pay Item 546-71-2 has been created to pay for short-term raised rumble strips.
