948-1.7: We kindly request your consideration of our proposed revision below... Addition of the statement "Post-consumer and post-industrial recycled resins are not allowed."

Response: Thanks for your comment, this was an oversight during revision; the intent was indeed to impose the restriction across all plastic pipe materials pending in-depth data, research, and service life estimation of plastic pipe manufactured using recycled content. The statement has been added to the PVC section as it was for polyethylene and polypropylene materials.

Change made.
