COMMENT: Article 695-11.3 now requires obtaining a minimum QC density of 100% of the Standard Proctor maximum density after removing the reference to Section 125. Please clarify whether the intent is to preserve the existing compaction requirements without changing the QC testing or acceptance procedures for Traffic Monitoring Site Equipment foundations and cabinet installations, or whether documented field density testing is now required. If documented QC density testing is intended, please clarify the applicable testing frequency, acceptance criteria, and documentation requirements, as these are no longer referenced from Section 125.

RESPONSE: The proposed language and current language are identical. The only substantive change is the removal of the reference to Section 125.

ACTION TAKEN: None
