

Noise Evaluation Process

- **Noise-Sensitive Sites Identified**
- **Detailed Noise Barrier Analysis**
 - Performed for future traffic conditions
 - Determines location of potentially reasonable and feasible noise walls (shown on the Potential Noise Barrier Locations board)
- **Noise Barrier Surveys**
 - Input from benefited properties during Final Design will be used to determine support for noise walls
- **Noise Barrier Aesthetics**
 - Heights, limits, color, and texture will be coordinated with the City and community during Final Design

Example ground-mounted noise wall texture

Example shoulder-mounted noise wall
