RE:	Customer Satisfaction Tracking Study - District 6 Results

The Schapiro Group (TSG) interviewed 300 Florida freeway drivers across District 6 as part of a larger statewide survey effort to explore ongoing usage of, attitudes toward, and perceptions of the Florida Department of Transportation's (FDOT) Intelligent Transportation Systems (ITS) services. Data collected in 2006, 2008, 2010, and 2012, in addition to the 2014 results, allow for changes in usage and attitudes to be tracked over time. During the months of April-June 2014, TSG randomly sampled phone numbers within Miami-Dade and Monroe Counties to obtain scientific telephone survey data. The margin of sampling error for results is \pm 5.7%. This report summarizes key changes in attitudes and behaviors regarding ITS services over the past eight years.

Some research highlights from District 6 include:

Driving Patterns and Traffic Information Services

- There are about the same number of drivers on District 6 freeways as in 2012 for the morning rush hour and during the evening, but there are slightly fewer during the day and the evening rush hour.
- The number of drivers who use radio and television traffic reports dropped very slightly. Of the drivers who use those sources, over half continue to see them as "very useful" in aiding their trips.
- Drivers continue to use several different sources for their traffic information, but their patterns have changed. In-car navigation systems (47 % in 2014; 28% in 2012) are now the most popular source. Electronic message signs came in second at 41% (down from 71% in 2012). Mobile apps (37%) are right behind, followed by websites on their computers or cell phones (31%). Each of the last two showed increases from 2012, with mobile apps doubling in usage over the past two years. All other tested sources are used by less than 20% of drivers.
- Among drivers who use websites for traffic information, Google enjoyed impressive growth and remains the top site (39% in 2014; 24% in 2012). Local TV and radio station websites remained the second most popular, though usage declined from 23% in 2012 to 15% in 2014. Just over one-third (39%) of drivers continue to indicate some other site or that they do not know.

• Starting in 2014, we asked drivers who use mobile apps for traffic information about their main mobile app for this kind of information. Google maps (35%) is the leader, with Waze (14%) the second most popular. Just over one-third (38%) of drivers indicate some other site or do not know.

ITS Services: 511 Traveler Information System

- When asked if they would use a service that provided traffic information through a phone call, website, mobile app, or social media site, a majority (59%) of drivers continues to say that they would be likely to use it.
- Awareness of the 511 Traveler Information System has decreased since 2012, while usage has remained the same. District 6 drivers are most likely to find out about 511 from friends or acquaintances, through signs on the freeway, or from television.
- Starting in 2012, respondents who use the 511 Traveler Information System are now asked which services they use. The most popular is the call-in service, though usage dropped from 57% in 2012 to 38% in 2014. The next most popular are the mobile app (22%), personalized services (21%), and the website (13%).
- Drivers continue to use the 511 Traveler Information System at different points in time, but their patterns have shifted. Compared to 2012, they are now three times as likely (45%) to use the system while stopped in traffic approaching congestion. This year also showed an increase in the percentage of drivers who access this information before they leave for their destination (44%). Usage while on their way to their destination (29%) remained similar to 2012.
- In a dramatic increase since 2012, nearly three-quarters of drivers (74%) changed their route based on the information they received from the 511 Traveler Information System. Some have changed their estimated time of arrival (30%), stress level (24%), or departure time (16%).

ITS Services: Electronic Message Signs

• Most District 6 drivers (81%) continue to read electronic message signs at least once per week. Most users also continue to believe the signs are accurate (91%), useful (90%), and easy to read (88%), and three-quarters (76%) remain likely to change their route based on information they see posted.

ITS Services: Road Rangers

• Awareness of the Road Rangers has decreased slightly since 2012, with 63% of drivers knowing about the service. Only 9% of drivers have top-of-mind awareness of how to contact a Road Ranger; this is a sharp decline from the 30% with similar awareness in 2012. However, when prompted with a reminder about *FHP/*347, roughly six in ten (59%) of other drivers say they know to call that number to request assistance. Among drivers who say they do not know how to contact a Road Ranger, 57% say they have heard of *FHP/*347.

- The percentage of District 6 drivers who have been assisted by a Road Ranger unit increased to 30% in 2014 from 20% in 2012. Of those who have been assisted, a large majority (88%) describe the Road Ranger as "very helpful." Nearly all drivers (86%) who know about Road Rangers, even those who have not had direct experience with them, continue to believe this service to be at least "somewhat useful."
- When asked what types of additional information they would like FDOT to provide, two-thirds of drivers (67%) say they would like information about alternate routes to help them avoid traffic incidents.
