SSUG 12-19-19

5065 –Add support for handling Active Directory logins

Tucker Brown

Issue and Proposed Enhancement

- Issue: All authentication is done within the SunGuide application

- Proposed Enhancement

  - North Texas Tollway Authority (NTTA) is running a version of Lonestar (TxDOT) and have already integrated standard AD integration so integration efforts would be minimal.

  - Questions

    - Would districts use this?

    - Would local users (outside AD), still be needed?

QUESTIONS?

1713 – EM window title bar

Tucker Brown

Issue and Proposed Enhancement

- Issue: Current EM event dialog lists the event number in the dialog title bar.

- Proposed Enhancement
  - In addition to the event number, the event type and location would be available in the title bar.

QUESTIONS?

2493 – Icon Enhancement for Arterial DMS

Tucker Brown

Issue and Proposed Enhancement

- Issue: DMS currently has a number of DMS categories (Toll Rate, Toll Status, Truck Parking, etc.)

- Proposed Enhancement

  - Add an additional layer for "Arterial DMS".

  - Functionality would follow the same uses a "General" but would allow operators to hide the arterial DMS on the Map.

  - Alternate, more challenging approach: Custom Display Filters

    - Allow users to create and save filters for specific sets of icons.

    - Would need to define interaction between the icon configuration and the display filters

QUESTIONS?

2025 – Unpublishing Published Events

Tucker Brown

Issue and Proposed Enhancement

- Issue: If an event manually unpublishes an event, then unpublishes it via the response plan, the action is recorded as successful twice in the event chronology.

- Proposed Enhancement
  - Track the current status of the 511 item in the response plan so the correct time for unpublishing is the only time recorded.
