

SG-3283

Duplicate User Group

Tucker Brown, SwRI

Issue

- User groups must be created from scratch and ALL permissions explicitly set
 - If the user group only differs by a couple of permission settings, this is tedious and possibly error-prone
- User Groups cannot be renamed so changing the name would require a complete redo

Proposed Solution

- Allow a “Duplicate User Group” option in the ribbon
- Users assigned to the group would not carry over to the new group
 - This would remain an explicit change by the Admin

QUESTIONS?

SG-3827

Duplicate Scheduled Action

Tucker Brown, SwRI

Issue

- Scheduled Actions dialog allows for duplication of schedules, but not duplication of items within a schedule
- If a user wants to add multiple similar items in a Schedule (like the same action at different times), they have to manually create a new Item for each one.

Proposed Solution

- Allow a “Duplicate Scheduled Item” option
- Schedule, timing, and actions would be duplicated with a different name.
 - Requested that the name be "Copy of <item name>"

QUESTIONS?

SG-3926

Assign CCTV to DMS and provide shortcut in DMS dialog

Tucker Brown, SwRI

Request

- Add the ability to configure a camera (and maybe a preset?) to a DMS
- Add a shortcut to the DMS status dialog for an "associated" camera that can be used to quickly access the video stream for that camera. This would speed DMS verification.

QUESTIONS?

SG-4082

Allow auditing of secondary event status

Tucker Brown, SwRI

Issue and Request

- There is currently no way to audit the primary or secondary event status of an event.
- Request is to add the ability in the audit functionality
 - Potential Problem: The event being selected as primary or secondary may (most likely?) have already been closed and not selectable in the system.
 - Should this allow the user to arbitrarily put in an event number?
 - Should they have to retrieve the event?
