

# SSUG 8-15-19

# 4771 – Report diagnostics from TPS devices

Tucker Brown

# Issue and Proposed Enhancement

- Issue: No current status information is currently gathered from SunGuide for TPS devices (other than the feed being active)
- Proposed Enhancement
  - Gather additional status from the feed and allow users to see this information in the Operator Map
    - Device status (failed or ok)
    - Specific location (parking space) of device
    - Ability to resync the sensor (if supported)
  - Given the different feed and different types, this may end up being custom settings per protocol

QUESTIONS?

# 1533 – Allow audit of Road Ranger procedural errors

Tucker Brown

# Issue and Proposed Enhancement

- Issue: Procedural Errors for RRs are not currently auditable
- Proposed Enhancement
  - Procedural errors would be auditable for both closed and open events
  - Changes available would include the vehicle selected as well as the error

QUESTIONS?

# 1584/1586 – Additions to the Event Details Dialog

Tucker Brown

# Issue and Proposed Enhancement

- Issue: In the Event Details dialog, one of the options is a checkbox to indicate this is a Rollover event
- Proposed Enhancement
  - This checkbox would turn into a combo box with the following options:
    - Rollover
    - Vehicle vs Vehicle
    - Multiple Vehicles
    - Vehicle vs Wall
    - Vehicle vs Guardrail
    - Vehicle vs Object
    - Hit And Run
    - Ditch
    - Spin Out
    - Off Road
    - Crossover
    - Head On
    - Canal
    - Other

# Issue and Proposed Enhancement

- Issue: The “FHP Incident #” is the only field for FHP information
- Proposed Enhancement
  - Rename the “FHP Incident #” to “FHP CAD #”
  - Add a field for “FHP Case #”
    - This needs to be made auditable as this is rarely known while the event is open.
