

4155 – Video Snapshots

Tucker Brown

Snapshots

- **Current**
 - DMS show the text when user hovers over the sign.
 - Cameras will only show the camera status.
- **Enhancement**
 - Use the existing snapshots to populate the hover text with an image from a filepath
 - Almost all (if not all) districts currently have a location that stores their current snapshots.
 - Camera configuration would add a field to add a filepath the camera to pull the snapshot
- **Issues**
 - Do Operator Maps have access to the snapshot location? Any issues giving it to them?
 - When DIVAS is live and FLATIS no longer needs these from districts, any issues leaving the snapshot folder in place?
 - SunGuide could develop a process to take snapshots from the video, if needed.

4378 – Drag/Drop Video

Tucker Brown

Drag/Drop Video

- Current
 - Users are able to drag cameras into the Video on Desktop, but not drag them off to remove
- Enhancement
 - Allow users to grab a viewer and drag back to the camera list to remove the video from the layout.
- Issues
 - What if the viewer has a tour running?
 - Initial thought is to remove the whole viewer including all streams included in the tour.
