

Introduction to Transit Operations Planning (ITOP) April 28 – May 1, 2020 in Orlando

The purpose of this course is to introduce operations planning to new professionals in the transit industry and to serve as a refresher course for others in the field. Transit operations planning is defined as a collection of activities which assure that transit services are cost-effectively provided to meet the mobility needs of a community. FDOT is sponsoring this hands-on transit operations planning course (FREE to participants) to support local transit agencies and local governments in the implementation and operation of public transit services. The course is open to those affiliated with a Florida public agency.

Topics include:

- Service Area & Route Characteristics
- Goals, Objectives, Measures, & Standards
- Data Collection
- Service Analysis
- Service Improvement Concepts
- Schedule Preparation
- Cost Allocation & Cost Estimation
- Demand and Revenue Estimation
- Service Change Implementation
